2012 - 2014 ACADEMIC CALENDAR

Fall Semester 2012

(August 27 – December 13)

August 23--26	Orientation and Registration
August 27	Classes Begin
September 3	HOLIDAY – Labor Day
October 12	Fall Break
November 12	HOLIDAY - Veterans Day
November 21 -23	HOLIDAY - Thanksgiving
December 6	Last Day of Classes
December 7	Study Day
December 8, 10-13	Final Examinations
December 15	Commencement

Spring Semester 2013

(January 9 - May 2)

January 8	Orientation and Registration
January 9	Classes Begin
January 21	HOLIDAY - Martin Luther King Jr. Day
February 18	HOLIDAY - Presidents Day
March 11-15	Spring Break
April 25	Last Day of Classes
April 26	Study Day
April 27, 29-May 2	Final Examinations
May 4	Commencement

Summer Semester (Term A) 2013

(May 9 – June 24)

May 8	Orientation and Registration
May 9	Classes Begin
May 27	HOLIDAY - Memorial Day
June 20	Last Day of Classes
June 21	Study Day
June 22, 24	Final Examinations

Summer Semester (Term B) 2013

(June 27 – August 12)

June 26	Orientation and Registration
June 27	Classes Begin
July 4	HOLIDAY - Independence Day
August 8	Last Day of Classes
August 9	Study Day
August 10, 12	Final Examinations

Fall Semester 2013

(August 26– December 12)

August 22-25	Orientation and Registration
August 26	Classes Begin
September 2	HOLIDAY – Labor Day
October 11	Fall Break
November 11	HOLIDAY - Veterans Day
November 27 – 29	HOLIDAY - Thanksgiving

August 7	Last Day of Classes
August 8	Study Day
August 9, 11	Final Examinations

This catalog becomes effective July 1, 2012.

The 2012-2013 academic calendar applies to the Prescott Campus. This calendar is subject to change.

Orientation programs for all new Prescott students are planned, scheduled, and conducted before registration each semester. A special orientation program for new international students is held prior to the general orientation required for all new students. New students will receive special information regarding the date, time, and place of orientation activities from Admissions approximately 30 calendar days in advance of the activities.

In compliance with federal laws and regulations, Embry-Riddle Aeronautical University does not discriminate on the basis of race, color, gender, creed, national and ethnic origin, age, or disability in any of its policies, procedures, or practices. An Equal Opportunity institution, the University does not discriminate in the recruitment and admission of students, in the recruitment and employment of faculty and staff, or in the operations of any programs and activities.

Designed for use during the period stated on the cover, this catalog gives a general description of Embry-Riddle Aeronautical University and provides

detailed information regarding the departments in the institution and curricula offered by the University. The online edition of this catalog will be considered to be the official version, reflecting addendum or corrections to the publication. The provisions of the catalog do not constitute a contract between the student and the University. The faculty and trustees of Embry-Riddle Aeronautical University reserve the right to change, without prior notice, any provision, offering, or requirement in the catalog. This includes the right to adjust tuition and fees, as necessary. The University further reserves the right at all times to require a student to withdraw for cause.

Official University Photography

Embry-Riddle Aeronautical University reserves the right to photograph members of the University community, including, but not limited to, its students and faculty, in situations appropriate to the image of the academic institution, and to publish likenesses in Embry-Riddle Aeronautical University publications, videos, or other recruitment or promotional materials. However, the University will, to the extent feasible, honor requests of constituents who do not wish their images to be photographed or published.

MESSAGE FROM THE PRESIDENT

To Our Students:

Thank you for choosing Embry-Riddle Aeronautical University for one of the most important investments you will make in your future. With thousands of students enrolled in our programs today, and over 100 ,000 alumni, you are now a member of a worldwide family of leaders in the aviation and aerospace industry.

Our commitment is to provide you with quality programs and faculty, as well as responsive and caring student services. In reviewing this catalog, you will see a broad range of academic opportunities that prepare our graduates for fulfilling careers within our dynamic industry. Many courses include projects where you will work with others as a team to solve real-world challenges.

As you read the history of Embry-Riddle, it will be clear that our University is evolving. In 86 years we have grown from the world's finest aviation institute to an internationally respected comprehensive university, committed to teaching, research, and professional service to the aviation and space community. With more than 150 locations all over the world, we can truly say that the sun never sets on Embry-Riddle.

I welcome you to an exciting and global University, and to the Embry-Riddle experience.

John P. Johnson, Ph.D.
President

MISSION OF THE UNIVERSITY

Our Mission

At Embry-Riddle, our mission is to teach the science, practice and business of aviation and aerospace, preparing students for productive careers and leadership roles in service around the world.

Our technologically enriched, student-centered environment emphasizes learning through collaboration and teamwork, concern for ethical and responsible behavior, the cultivation of analytical and management abilities, and a focus on the development of the professional skills needed for participation in a global community. We believe a vibrant future for aviation and aerospace rests in the success of our students. Toward this end, Embry-Riddle is committed to providing a climate that facilitates the highest standards of academic achievement and knowledge discovery, in an interpersonal environment that supports the unique needs of each individual.

Embry-Riddle Aeronautical University is the world's leader in aviation and aero-

space education. The University is an independent, non-profit, culturally diverse institution providing quality education and research in aviation, aerospace, engineering and related fields leading to associate, baccalaureate, master's and doctoral degrees.

Our Vision

Embry-Riddle will be the world's source for innovation and excellence in aerospace education and applied research.

Our Values

The strength of our University is firmly rooted in our values. We expect that our students, faculty and staff share and demonstrate the values of student success, a positive learning environment and mind-set, safety first in all situations, personal growth, integrity, honesty, trust, diversity, open communication, teamwork, character, change for progress, fiscal soundness, healthy investments, and a can-do attitude.

EMBRY-RIDDLE AT A GLANCE

Aviation and Embry-Riddle: The Lifelong Partnership

In 1903 Orville and Wilbur Wright made history with their sustained, controlled flight of a powered aircraft. Only a few short years later, the advent of regular passenger service and the start of World War I combined to produce a dynamic new industry to meet the demands of commercial and military aviation.

Unlike many other developments at the end of the Industrial Revolution, aviation required a special education — learning how to fly, learning about safety and weather, and learning about engines — from skilled maintenance to the outer limits of performance.

The need for trained pilots and mechanics quickly led to the establishment of a new type of school, one focused totally on aviation. In the beginning, these organizations were often a combination of airplane dealership, airmail service, flight training center, and mechanic school. The original Embry-Riddle operations fit that mold precisely.

On Dec. 17, 1925, exactly 22 years after the historic flight of the Wright Flyer, barnstormer John Paul Riddle and entrepreneur T. Higbee Embry founded the Embry-Riddle Company at Lunken Airport in Cincinnati, Ohio. The following spring the company opened the Embry-Riddle School of Aviation, coinciding with the implementation of the Air Commerce Act of 1926, which required, for the first time, the certification and medical

T. Higbee Embry

examination of pilots.

Within three years the school had become a subsidiary of AVCO, the parent of American Airlines. Embry-Riddle remained dormant during most of the 1930s, mirroring the casualties

John Paul Riddle

of the Great Depression, and the Lunken Airport operation was phased out. By the end of the decade, however, World War II erupted in Europe and the demand for skilled aviators and mechanics grew significantly. Embry-Riddle's second life was about to begin.

In South Florida, Embry-Riddle opened several flight training centers and quickly became the world's largest aviation school. Allied nations sent thousands of fledgling airmen to the Embry-Riddle centers at Carlstrom, Dorr, and Chapman airfields to become pilots, mechanics, and aviation technicians. Some 25,000 men were trained by Embry-Riddle during the war years.

After the war, under the leadership of John and Isabel McKay, Embry-Riddle expanded its international outreach while strengthening its academic programs.

Jack R. Hunt

With Jack R. Hunt as president, in 1965 Embry-Riddle consolidated its flight, ground school, and technical training programs in one location by moving northward to Daytona Beach, Florida. This move, which proved to be a moment of singular importance, was made possible by Daytona Beach civic leaders who donated time, money, and the use of personal vehicles. The relocation signaled the rebirth of Embry-Riddle and

Embry-Riddle at a Glance

Jack R. Hunt

the start of its odyssey to world-class status in aviation higher education.

In 1968, Embry-Riddle was accredited by the Commission on Colleges of the Southern Association of Colleges and Schools to award degrees at the

associate, bachelor, and master levels, and in 1970 changed its name from "Institute" to "University." Also in 1970, centers were established at U.S. military aviation bases to serve the educational needs of active-duty military personnel.

In 1978, under President Hunt's leadership, Embry-Riddle opened a western campus in Prescott, Arizona, on the 511-acre site of a former college. With superb flying weather and expansive grounds, the Prescott campus has been an outstanding companion to the University's eastern campus in Daytona Beach.

Lt. Gen. Kenneth L. Tallman

Lt. Gen.

Kenneth L. Tallman

Academy. Under Tallman's leadership, a school of graduate studies and the electri-

Continuing Hunt's legacy was Lt. Gen. Kenneth L. Tallman, president of Embry-Riddle for five years. He came to the University after a distinguished 35-year military career that included service as superintendent of the U.S. Air Force

cal engineering degree program were introduced. He led the University into research with the addition of the engineering physics degree program. He also developed stronger ties between Embry-Riddle and the aviation/aerospace industry.

Dr. Steven M. Sliwa

Dr. Steven M. Sliwa led the University from 1991 through 1998. Sliwa, the University's third president, is best known for creating an entrepreneurial environment

Steven M. Sliwa

and for developing strategic partnerships with industry. These partnerships included a joint venture with FlightSafety International; a partnership with Cessna Aircraft Company; a technology alliance with IBM; and an exclusive educational partnership with the Aircraft Owners and Pilots Association. He also spearheaded a \$100+ million capital expansion program, which included an \$11.5 million congressional line-item appropriation. In addition, new academic and research programs were created at his direction to respond to structural changes in the industry while increasing market share in the University's core programs.

George H. Ebbs

Embry-Riddle's fourth president, Dr. George H. Ebbs, led the University from 1998 through 2005. During his tenure the annual college guide produced by U.S. News & World Report consistently ranked Embry-Riddle's aerospace engineering program No.

Dr. George H. Ebbs

1 in the nation among schools without doctoral programs, a ranking the University has achieved every year since 2001. Embry-Riddle's program in aerospace engineering is the largest in the nation, as are its programs in aeronautical science and engineering physics.

Under the leadership of Dr. Ebbs, a new graduate degree program in safety science was introduced, as well as new undergraduate degree programs in computer science, global security and intelligence studies, mechanical engineering, software engineering, and space physics. In addition, major construction was initiated at the Daytona Beach and Prescott residential campuses.

Dr. Ebbs presided over three military contracts worth a total of more than \$57 million. Under those contracts Embry-Riddle provides aviation-related degree programs to the U.S. military in Europe; trained Air Force, Air National Guard, and international flight safety officers at Kirtland Air Force Base in Albuquerque, N.M.; and trained Air Force pilots at the U.S. Air Force Academy in Colorado Springs.

Dr. John P. Johnson

Dr. John P. Johnson is the University's fifth president. He previously served as Embry-Riddle's interim president and as provost and chief academic officer. Before joining Embry-Riddle, he was the provost and vice president for academic affairs at Texas A&M University, Texarkana, and served as dean at the Medical University of South Carolina and at Northern Kentucky University.

Under Dr. Johnson's leadership Embry-Riddle has expanded its research activity; has launched its first doctoral degree programs, in aviation and in engineering physics; and is developing a global strategy to take its aviation and aerospace expertise overseas, most recently by opening a Singapore location. Working with the FAA

Dr. John P. Johnson

and industry leaders, Dr. Johnson has positioned the University as one of the nation's leaders in the development of next-generation air traffic management technology.

For his leadership in aerospace education and research he received the Jimmy Doolittle Fellowship

Award from the U.S. Air Force Association in 2007. He also received the 2010 John K. Lauber Award for Aviation Safety from the University Aviation Association, honoring the University's record of safe flying and operations as part of the safety-culture initiative established by Dr. Johnson. The National Aeronautic Association awarded Embry-Riddle the prestigious 2008 Collier Trophy for the development and implementation of ADS-B technology under his stewardship.

ACCREDITATIONS AND AFFILIATIONS

University Accreditation

Embry-Riddle Aeronautical University, including the Daytona Beach Campus, the Prescott Campus, and the Worldwide Campus, is accredited by the Commission on Colleges of the Southern Association of Colleges and Schools (SACS-COC) (1866 Southern Lane, Decatur, GA 30033-4097, Telephone: 404-679-4501) to award degrees at the associate's, baccalaureate's, master's, and doctoral levels.*

Campus-Specific Program Accreditations

Prescott Campus

The bachelor degree programs in Aerospace Engineering, Computer Engineering, Electrical Engineering, and Mechanical Engineering are accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>. The bachelor degree programs in Aeronautical Science and Aviation Business Administration are accredited by the Aviation Accreditation Board, International (AABI) (3410 Skyway Drive, Auburn, AL USA 36830. Telephone: 334-844-2431).

Daytona Beach Campus

The bachelor degree programs in Aerospace Engineering, Civil Engineering, Computer Engineering, Electrical Engineering, Engineering Physics, Mechanical Engineering, and Software Engineering are accredited by ABET. The bachelor degree programs in Aeronautical Science, Aerospace Electronics, Air Traffic Management, Applied Meteorology, Aviation Business Administration, and Safety Science are

accredited by AABI. The bachelor degree programs in Business Administration, majors in Management and in Air Transportation, and the Master of Business Administration program including the Specialization in Aviation Management are accredited by the Association of Collegiate Business Schools and Programs (ACBSP) (11520 West 119th Street, Overland, KS 66213. Telephone: 913-339-9356). The Aviation Maintenance Science degree program is accredited by AABI for two Areas of Concentration: Aerospace Electronics and Maintenance Management. The certificate programs in Maintenance Technology (airframe and power plant) are approved by the Federal Aviation Administration (FAA).

At Both Residential Campuses

Certificate programs in Flight (private, commercial, instrument, multi-engine, flight instructor, and instrument flight instructor ratings) and Flight Dispatch are approved by the FAA.

* Contact information for SACS Commission on Colleges is included in order to enable interested constituents (1) to learn about the accreditation status of the institution, (2) to file a third-party comment about the institution's decennial review of accreditation, (3) to file a complaint against the institution for alleged non-compliance with a standard or requirement, or (4) to provide a note of exemplary service or quality standards related to the institution.

Please note: Normal inquiries about the institution, such as admission requirements, financial aid, educational programs, etc., should be addressed directly to the institution and not to the Commission's office.

For Embry-Riddle - Daytona, call (386) 226-6000.

For Embry-Riddle - Prescott, call (928) 777-3728.

For Embry-Riddle - Worldwide, call (386) 226-6910.

OUR STUDENT PHILOSOPHY

*Adopted by Jack R. Hunt in 1975
Updated and reaffirmed by President George H. Ebbs, Ph.D., in 2003*

A STUDENT...

Is the most important person in this university.

A STUDENT...

Is not an interruption of your work, but the purpose of it.

A STUDENT...

Is not a cold statistic, but a flesh-and-blood human being with feelings and emotions like your own.

A STUDENT...

Is not someone to argue or match wits with.

A STUDENT...

Is a person who brings us needs - it is our job to fill those needs.

A STUDENT...

Is deserving of the most courteous and attentive treatment we can provide.

A STUDENT...

Is the person who makes it possible to pay your salary whether you are faculty or staff.

A STUDENT...

Is the lifeblood of this and every university.

A STUDENT...

Is something you once were, REMEMBER?

UNIVERSITY INFORMATION

Embry-Riddle Aeronautical University is the world's oldest and largest fully accredited university specializing in aviation and aerospace. A truly international institution, the University educates undergraduate and graduate students at its residential campuses in Daytona Beach, Florida, and Prescott, Arizona; at its Worldwide Campus locations around the globe; and through online learning.

Embry-Riddle offers its students a wide array of undergraduate and gradu-

ate degree programs in aviation, aerospace, transportation, business, engineering, and related high-tech fields.

In 2010, the University launched its first doctoral degree programs, the Ph.D. in aviation and the Ph.D. in engineering physics. The aviation doctorate, the first of its kind in the nation, is designed for working professionals who want to enhance their contributions to the aviation and aerospace organizations that employ them. The engineering physics doctorate builds

on the University's solid program of space research, which is funded by NASA, the National Science Foundation, the U.S. Air Force, and other agencies.

These new doctoral programs expand the applied research opportunities in which Embry-Riddle faculty and students assist the aviation/aerospace industry and governmental agencies, among others, in meeting real-world challenges.

The University's 185-acre eastern campus in Daytona Beach is adjacent to Daytona Beach International Airport, with Orlando and Kennedy Space Center each only an hour's drive away. Currently under construction is the James Hagedorn Aviation Complex, an expansive three-building facility that will provide a new location for the campus's flight training operations, aircraft maintenance training, and fleet maintenance. Recent additions to the campus include the High-Altitude Normobaric Lab, the College of Business academic hall, and the Apollo residence hall. Also of note: the College of Aviation academic hall, the Lehman Engineering & Technology Center, and the Advanced Flight Simulation Center. The Sim Center contains an FAA-certified Level-6 CRJ200 simulator and Level-6 Frasca flight-training devices that provide a level of on-campus training unique to Embry-Riddle.

The University's 539-acre western campus is located in Prescott, Arizona, 100 miles north of Phoenix. Recent additions to the campus include the Aviation Safety and Security Archives and four labs that support study and research in the areas of Air Traffic Control, Ergonomics, High Performance Vehicles, and Industrial Hygiene. Also of note are the Udvar-Hazy Library & Learning Center, the Aerospace

Experimentation & Fabrication Building, Haas Memorial Chapel, the Visitors Center, Academic Complex I, the King Engineering & Technology Center, and the Robertson Flight Simulation Center, which houses advanced Frasca flight-training devices.

The Worldwide Campus provides educational opportunities for working civilian and military professionals. Its academic programs are offered at more than 150 locations in the United States, Europe, Asia, Canada, and the Middle East and through Web-based online learning. Based on their unique requirements, classroom students can select online courses, and deployed military students can shift from classroom to 100% online course delivery. With Worldwide's new EagleVision technology, students at different geographical locations can receive instruction at the same time.

With active faculty advisement, student teams from the various campuses regularly take top honors in competitions such as SAE engineering events and NASA Means Business and in flight competitions such as NIFA SAFECON and the Women's Air Race Classic.

As aviation and aerospace continue to evolve, so does Embry-Riddle. The University is committed to the expansion of opportunities for students to work more closely with the aviation industry in the United States and in other nations. Guiding the process of evolution are dedicated teachers, administrators, alumni, trustees, and advisory board members who share our students' love of aviation and who strive to ensure Embry-Riddle's continued position as the world's premier aviation and aerospace university.

ADMISSION TO THE PRESCOTT CAMPUS

General Procedures

New students are eligible for admission at the beginning of the fall, spring, and summer terms. High school students may apply at the end of their junior year. Applications received after the priority filing dates will be processed on a space-available basis. You may apply online or download the application at: www.erau.edu.

Term	Filing Priority	Notification	Deposit
Fall	January 15	Rolling	May 1
Spring	November 1	Rolling	November 1
Summer Term A	April 1	Rolling	As requested
Summer Term B	April 1	Rolling	As requested

For more information contact the Admissions Office at:

Embry-Riddle Aeronautical University
Director of Admissions
3700 Willow Creek Road
Prescott, AZ 86301-3720
(928) 777-6600 or
(800) 888-3728
Fax (866) 532-5894
email: pradmit@erau.edu

First Year Applicants

The University defines a first-year candidate as one who is applying for degree status directly from high school. The University may offer admission to first-year applicants who present an academic record that demonstrates their ability to graduate from high school. To reach an admissions decision, the following information is considered: overall academic performance and grades, rank in class (if available), extra-curricular activities and standardized test scores. The University's Admissions Office implements established academic policies and requirements that define the necessary qualifications for admission.

Entrance requirements to the University vary between technical and non-technical degrees.

Technical Majors: Aerospace/Computer/Electrical/Mechanical Engineering, Space Physics and Applied Meteorology.

Entrance requirements into a technical major include 4 years of English, 4 years preferred college preparatory mathematics, 2 years of social science and 2 years of science with labs (3 years preferred) including chemistry and/or physics. For Aerospace and Mechanical Engineering both chemistry and physics are required.

Non-Technical Majors: Aeronautical Science (Professional Pilot), Aeronautics, Air Traffic Management, Aviation Business Administration, Aviation Environmental Science, Global Security and Intelligence Studies, Interdisciplinary Studies.

Entrance requirements into a non-technical major include 4 years of English, 3 years preferred college preparatory mathematics, 2 years of social science and 2 years of science with labs.

Home School Students

Home-schooled students need to provide a transcript of course work or portfolio and SAT 1 reasoning test or ACT scores.

Standardized Testing

SAT I reasoning test or ACT is required for admission for U.S. citizens and permanent residents. International students: The SAT I reasoning test or the ACT is strongly recommended for admission.

Standardized test results are always reviewed in conjunction with your academic record and are never the sole factor used to determine acceptance to your degree program.

English Language Proficiency

The Office of Admissions strongly recommends that all of our applicants, for whom English is not the primary language, take the TOEFL exam to supplement their verbal SAT I score. This information will aid the University in accurately assessing verbal skills. For more information about testing dates and locations:

of International Recruitment, Office of Admissions, at (928) 777-6600.

Transcripts

The Admissions Office accepts either an official secondary school transcript or the General Education Development Certificate (GED). An official transcript or GED score report must be sent directly from the issuing institution to Embry-Riddle.

Transfer Applicants

The University welcomes applicants who have demonstrated success at other institutions of higher education. For purposes of admission, a transfer student is defined as any student who has earned college credit after graduating from high school. Transfer applicants are required to submit transcripts from each institution attended.

In making transfer admission decisions, the Admissions Office reviews official transcripts of all college-level work attempted and completed. Transfer candidates who have earned fewer than 30 college-level credit hours may be required to submit an official final high school transcript. The minimum grade point average required for admission to Embry-Riddle is a 2.00 from the last institution attended and a combined GPA of 2.00. Most successful transfer applicants present at least a 2.50 (C+) average on a four-point scale. Applicants with grade point averages between a 2.00 and a 2.50 will be reviewed on a case-by-case basis.

The University reserves the right to refuse admission to students who are on probationary status or who were academically dismissed from other colleges or universities. If the University admits such students, they will be admitted with conditional status.

Admissions

Transfer Credit

Transfer credit may be granted under the following conditions:

1. Appropriate coursework completed at another accredited institution with a grade of A, B, C, P, or equivalent will be accepted. Grades are not transferable.
2. Previous flight experience may be accepted in accordance with the Embry-Riddle policy as stated in the Advanced Standing section of this chapter.
3. Credit hours are transferable if earned at institutions accredited by the appropriate regional agency. Academic credit that was earned more than ten years ago will be reviewed and accepted on a case by case basis. It is left to the discretion of the student, in consultation with the student's academic advisor, to determine whether to retake the courses when placement testing indicates a deficiency. Embry-Riddle has sole discretion in determining which and how many transfer credit hours will be accepted toward degree requirements.
4. Embry-Riddle evaluates previous academic credit on a course-by-course basis. If classes are not applicable to the student's degree program at Embry-Riddle, they will be considered as electives in excess of minimum degree requirements. The level of credit (upper or lower division) is determined by evaluation of the course at Embry-Riddle.
5. Embry-Riddle may, at its discretion, require an evaluation examination for any course submitted for transfer credit if there is doubt concerning the equivalency of the transfer course with a similar course offered at Embry-Riddle. Embry-

Riddle cannot guarantee that courses are transferable. Courses are accepted at the discretion of the University.

6. The transfer student's records (transcripts, etc.) will be evaluated according to the rules and regulations as described in this catalog and in accordance with University policies in effect at the time of the student's admission to a degree program. After evaluation, the student will be sent a course-by-course outline of all transfer credit accepted by the University.

Nontraditional Student Applicants

Embry-Riddle acknowledges that full-time employment or other life experiences often provide the motivation and discipline to be a successful student in college. If a student's academic career has been interrupted for a minimum of three years due to personal or financial reasons, the care of dependents, or serving time in the U.S. military, Embry-Riddle considers the student a nontraditional applicant and recognizes that his/her high school academic record may not accurately reflect the student's ability. When reviewing the student's application, unique circumstances are taken into account prior to determining whether the applicant should be a first-year or transfer student. If a GED (General Education Development Certificate) has been earned, an official copy of the results must be sent from the issuing agency. The following items must be provided by those wishing to be considered for admission:

1. Completed application and \$50 application fee (nonrefundable).
2. Official copy of high school transcript

or completion of the General Education Development Test (GED scores must be sent directly by the testing agency).

3. Documentation of activities or full-time employment experience (civilian, military, or any combination equaling three years).

Returning Student Applicants

An Embry-Riddle student whose attendance at the University is interrupted may be required to apply for readmission. In such cases, a new application for admission must be filed with the Director of Admissions. For more information, refer to the Continuous Enrollment section of the catalog.

Non-Degree Seeking Applicants

Embry-Riddle recognizes the needs of working adults who are interested in furthering their education for retraining or for enhancing professional skills. Students who meet University admission requirements are permitted to enroll in courses as special students in a non-degree seeking status. These students are permitted to continue their enrollment as long as they maintain satisfactory academic status or until they file a formal application for admission as a degree-seeking student. Persons interested in applying as a non-degree seeking student can get more information from the Director of Admissions.

International Applicants

This refers to nonresident, nonimmigrant students planning to study in the U.S. (typically on an F-1 or a J-1 visa.) The following items must be provided:

1. Completed application and \$50 application fee (nonrefundable).
2. Official copy of upper secondary school

academic records (must be sent directly from the school to Embry-Riddle). These records must arrive in the Admissions Office in the original envelope with an unbroken seal to be considered official. Both original language documents and English translations are required.

3. Standardized Test Scores - The SAT I reasoning test or the ACT is strongly recommended for admission. Standardized test results are always reviewed in conjunction with your academic record and are never the sole factor used to determine eligibility. For information about the SAT/ACT test dates and locations please contact:

The College Board

5 Columbus Ave.

4. Test of English as a Foreign Language (TOEFL)
To be admitted into a degree program, international students who will not be graduating from an English educational system or for whom English is not the primary language must submit official TOEFL scores. The preferred score for admissions is 213 (computer based), 79 (Internet based), or 550

Admissions

(paper based). Students scoring below the preferred score, but who meet all other admission requirements, may be granted conditional admission; upon completion of adequate English language preparation, regular admission will be offered. Embry-Riddle in Prescott is a designated cooperating university with ELS Language Centers; for more information, please see the English Language Program section on page 22. The Office of Admissions also encourages all applicants for whom English is not the primary language to consider taking the SAT I to supplement their TOEFL score. This additional information will aid the University in accurately assessing verbal skills. For more information about TOEFL testing dates and locations contact:

For more information concerning TOEFL or the Embry-Riddle Language Institute, contact the Director of International Recruitment, Office of Admissions, at (928) 777-6600.

5. Transcripts from international postsecondary institutions. An official copy of record of study, grade obtained, examinations passed, and any diplomas, certificates, or degrees received at all secondary, postsecondary, university, and professional schools attended must be sent directly to Embry-Riddle by the school. These records must arrive in the Admissions Office in the original

envelope with an unbroken seal to be considered official. Both native documents and English translations are required. In addition, applicants may be required to have these transcripts evaluated by an outside evaluation service. If so required, the applicant will receive specific instructions about obtaining the evaluation during the admission process. The fee charged for this service is the responsibility of the applicant. The service provider must send the course-by-course evaluation directly to Embry-Riddle. Following is a list of international translation and evaluation providers:

6. I-20 Requirements for International Students. Upon application, international students must submit the following:
 - a. Affidavit of Financial Support for International Students (see application booklet).
 - b. Supporting bank letter verifying appropriate funds on deposit. This amount will reflect the amount needed to cover tuition, fees, books, health insurance, and living expenses for one year, plus \$3,000 for each accompanying dependent. In the case of sponsored students, an official notification of public or private sponsorship will take the place of a bank letter. A University assistantship contract does not relieve a student from the requirement to provide both a financial affidavit and a supporting bank letter, unless waived by the appropriate University official. International students must be fully prepared upon arrival on campus to meet all normal living expenses and manage their finances for the period of time required to complete the degree.
 - c. At least 30 days prior to matriculation, students accepted for admission must submit a \$200 advance tuition deposit to confirm their enrollment to the University. The deposit will be held in the student's account for one year and will be credited toward tuition during the first semester of attendance. After one year, if the student has not enrolled, the deposit is forfeited.
 - d. The I-20 Form must be in the student's possession before departure and presented to the nearest U.S. embassy or consulate to obtain the necessary entry visa before departure to the U.S.
 - e. The I-20 will be issued to the student upon acceptance to the University, if all required documentation has been received.
7. Provide documentation of immunity to vaccine-preventable diseases as described in material sent from the University. At enrollment, all students from areas determined to be endemic or at high risk for tuberculosis will be required to have a tuberculosis skin test (Mantoux test) and additional medical follow-up as needed and directed by the campus Health Services Office.
 8. All flight students are required to hold a current First or Second Class Federal Aviation Administration (FAA) medical certificate. Aviation Medical Examiners (AMEs) are designated by the FAA to issue these certificates, following completion of an application and a physical examination. Aviation Medical Examiners can be found at the FAA Web site, www.fafsa.gov/pilots/amelocator/. International students

Admissions

desiring flight programs will be required to complete federal screening procedures in compliance with U.S. Department of Homeland Security (DHS) notification requirements. Specifics will be provided during the admissions process.

All materials submitted become the property of Embry-Riddle Aeronautical University and cannot be reproduced, returned, or forwarded.

SEVIS

SEVIS is the Student and Exchange Visitor Information System, consisting of a governmental computerized system to maintain and manage data related to foreign students and exchange visitors during their stay in the United States. This system allows real-time access to this information and assists colleges and universities in ensuring that students comply with the terms of their visas. For more information about SEVIS, please refer to the Bureau of Immigration and Customs Enforcement (ICE) Web site at <http://www.ice.gov/sevis/>.

English Language Program - ELS Language Centers

In order to help students fulfill the English proficiency requirement, Embry-Riddle in Prescott works as a cooperating school with ELS Language Centers, one of the premier providers of English language learning in the United States. If you meet all other admission criteria beside the TOEFL requirement, ERAU-Prescott can conditionally admit you while you study English with ELS Language Centers. Upon completion of Level 112 with ELS Language Centers, you can be fully

admitted to begin your studies at ERAU – Prescott.

Please visit the ELS Language Centers website at <http://www.els.edu> for more information.

For direct information about ERAU – Prescott's cooperating University arrangement with ELS Language Centers, and for a listing of the ELS Language Centers location nearest to our campus, please contact International Admissions at 001.928.777.6600.

Admitted Student Information

Important information regarding University policies and procedures will be sent to students upon acceptance. All students accepted for admission must submit a non-refundable \$200 advance tuition deposit by the stated date in order to accept the offer of admission. This deposit confirms your intent to attend the University and is credited toward the first semester's tuition.

If you decide to accept our offer of admission for the fall term, you must submit the tuition deposit by the National Candidates Reply Date of May 1. Spring term deposit date is November 1. Summer term deposit dates are April 1 for summer A and May 1 for summer B.

The deposit will be held in the student's account for one year. If the student does not enroll after one year, the deposit is forfeited.

A student who cancels the application at any point in the admissions process may reactivate the application without a fee for one year at any time up to the admissions deadline for the same semester of the following academic year. After one year, a new application, fee, and supporting documents must be submitted.

Embry-Riddle Aeronautical University's

admission decision is valid for one term only. Further, when a scholarship is awarded, it is only valid beginning the specific term indicated in the award and/or admissions notification letter. Because admission and scholarship criteria may change from one term to another, admission decisions and scholarship awards are not automatically deferred.

Students requesting a deferral are required to submit their request in writing to the Director of Admissions. The request must include the reason/s for the deferral. Scholarship deferrals for one term are at the discretion of the Director of Financial Aid as these awards are offered for fall term enrollment.

Advanced Standing

Advanced standing may be awarded for prior learning achieved through postsecondary education. Students who feel their background warrants consideration for advanced standing not already granted for specific courses may request course-equivalency examinations. Flight experience will be evaluated in accordance with procedures outlined later in this section.

It is the student's responsibility to ensure that all documentation is submitted to the University. This information can either be sent with the application for admission or mailed under separate cover. Formal application for advanced standing for flight training must be made before the end of the student's first semester of attendance.

All academic evaluations for advanced standing will be completed before the end of the student's first semester of attendance at, or readmission to, the University. The student will be given a copy of the completed official evaluation and have 30 calendar days

to question the credit awarded. Advanced standing and transfer credit granted in accordance with these procedures will be authenticated and maintained by the Records Office. Documentation that may be submitted for consideration toward advanced standing includes military training, FAA certificates, official examination scores, and professional experience. Credit may be awarded as follows:

1. The University offers advanced standing credit toward a college degree to those students who present official College Entrance Examination Board (CEEB) Advanced Placement Test scores of 3 or better on any examination. Up to 30 hours of International Baccalaureate (IB) credit may be earned for official test scores of 4 or higher.
2. Embry-Riddle follows the standards recommended by the American Council on Education for awarding credit for the College Level Examination Program (CLEP) general examinations. To be officially evaluated for credit, the test scores must be submitted before the student's initial enrollment as a degree candidate. The number of credit hours recognized by Embry-Riddle for these examinations in various disciplines are as follows:

Communications	6 credit hours
Humanities	6 credit hours
Social Sciences	6 credit hours
Natural Sciences	6 credit hours
Mathematics	6 credit hours
3. The University has approved certain CLEP subject examinations, Defense Activity for Non-Traditional Educational Support (DANTES) examinations, and Excelsior College Examination (ECE) for award of credit as applicable to the

Admissions

student's program. Scores from these examinations must be submitted before initial enrollment as a degree candidate to be officially evaluated for credit. Credit for these examinations may not be applied toward the last 30 credit hours required for a bachelor's degree.

4. Training in military service schools will be considered for credit by each curriculum division, based on the recommendation of the American Council on Education.
5. Students who hold a pilot certificate may be eligible for advanced standing. Advanced standing based on a pilot certificate may be awarded for the appropriate flight course. A student who received college credit for their flight training may be eligible for advanced standing for certain academic courses. A determination of the exact amount of credit to be awarded will be made by the Records Office and the Flight Department. In any case, advanced standing credit must be applied for during the first semester. To obtain credit, the applicable FAA certificate must be presented at the time that the advance standing request is made. All advance standing credit for flight courses will be recorded on academic transcripts after the first flight course is completed at Embry-Riddle.
6. Students holding a Commercial Pilot Certificate or Airline Transport Pilot Certificate, with significant recent experience beyond the basic certification level, may petition for additional credit. All certificate levels refer to U.S. FAA certificates. Foreign certificate holders must convert their licenses to U.S. FAA certificates prior to any credit being

awarded.

7. The degree program for which holders of the FAA Airframe and Powerplant Certificate may receive advanced standing is Aeronautics.
8. The Aeronautics degree awards college credit based on an individual's past training and job experience in an aviation-related field. A description of advanced standing applicable to the Aeronautics degree may be found in the Academic Programs section of the catalog.
9. A student who possesses qualifications not listed above and who believes that his/her background warrants consideration for advanced standing may submit appropriate evidence of credentials for evaluation.

Degree Completion Program/ Active Duty Military Personnel

All branches of the armed services offer various "Bootstrap" and degree completion programs. Embry-Riddle welcomes applications from qualified military personnel seeking to participate in such programs.

Applications must be submitted by established deadlines. Upon receipt of the student's application and supporting documents, the University will evaluate previous college coursework, military education, and work experience to determine eligibility for advanced standing. Each applicant receives a copy of the University evaluation form stating specifically the courses for which credit has been given.

Immunization Requirements

A Medical Report Form is required. All entering students born after Dec. 31, 1956,

must provide proof of two doses of MMR (Measles, Mumps, and Rubella) administered on or after January 1, 1968 and on or after their first birthday. All students who reside in University housing must either document the immunizations for Hepatitis B and Meningococcal Meningitis or sign a waiver declining vaccination. A tuberculin test may be required of International students upon arrival on campus.

Flight Training Requirements

All students planning to begin flight training at Embry-Riddle are required to hold a current First or Second Class Federal Aviation

Administration (FAA) medical certificate and provide proof of citizenship before beginning flight training. In addition, the Aviation and Transportation Security Act (ATSA) requires all flight students to show acceptable documentation of U.S. citizenship OR complete background check requirements. Upon acceptance to the University, all students will be sent specific, detailed information on requirements for flight students.

GRADUATE ADMISSIONS

Embry-Riddle seeks graduate students of good character who have demonstrated scholastic achievement and capacity for future growth. Our admission process is aimed at identifying the best students who show the potential to succeed in our graduate program. We use the guidelines in the next section to determine which applicants are to be granted full admission to the Master of Science in Safety Science graduate program. Students who fail to meet these guidelines, but who are judged to have potential for success in the graduate program, may be granted conditional admission (subject, of course, to openings in the graduate program). Students admitted under conditional status will have to prove their ability to pursue a graduate program by meeting specific performance criteria after matriculation at the University.

Admission actions are often taken in the anticipation of the applicant successfully completing the baccalaureate or some other admission requirement. Admission granted by such actions is provisional and is automatically rescinded if the applicant fails to meet the requirement before the specified date for the start of graduate study.

The Master of Science in Safety Science may require that potential degree candidates display a mastery of a number of topical areas critical to the initiation of graduate-level study in this field. Candidates are informed of these requirements along with their notification of acceptance.

Any questions relating to the criteria or any other aspect of the admissions process should be addressed to the Graduate Admissions Office on the Prescott Campus.

General Criteria

Applicants must possess an earned baccalaureate degree or equivalent.

If earned in the U.S., this degree must be from an appropriately accredited college, university, or program.

If earned outside the U.S., the degree must be from an institution that offers a degree program that is equivalent to one in an appropriately accredited college, university, or program in the U.S. Applicants educated at foreign schools may be required to submit an evaluation by submitting official certified documentation of their educational achievements to an international education evaluation organization specified by Embry-Riddle.

A well-defined process will be used to determine whether a student is fully qualified for admission to a specific graduate program. Criteria for making this judgment will include academic record, work experience, professional activities, publications, recommendations, written statements, and interviews, as appropriate.

Articulation of applicable courses to meet program requirements or course prerequisites may be required as a condition of admission.

In most cases, students required to complete undergraduate prerequisites as conditions of their admission will receive conditional status admission. Upon successful completion of the appropriate undergraduate prerequisite courses, these students will transition to full graduate student status. While in conditional status, these students are not eligible for assistantship opportunities.

Master of Science in Safety Science (MSSS)

Applicants for admission to the MSSS program must have prerequisite knowledge in the areas of:

- Mathematics
- Chemistry
- Physics

If they do not possess such knowledge, they may be required to register for undergraduate prerequisite courses in these areas. The student should possess a strong academic record, generally evidenced by a CGPA of 2.75 or higher.

Conditional Admission

- Students who fail to satisfy the guidelines for full admission but are judged to have potential for success in the graduate program may be granted conditional admission.
- Students admitted under conditional status must prove their ability to pursue a graduate program by meeting specific performance criteria after matriculation at the University. Students admitted on conditional status will be monitored closely as to scholarly performance. Students who are admitted conditionally will be on conditional status until they have completed nine hours of graduate work. During this period, students may receive no grade lower than a B. Students will not be permitted to repeat courses during this period.
- The conditions of admission will be communicated to applicants in the letter of admission. Students are fully admitted to the program when the conditions have been properly satisfied.

Procedures for Admission

Applications will not be processed until all required documents are received. Applications received after the submission deadlines stated in the following sections will be processed as quickly as possible, but acceptance for admission may not be early enough for the applicant to begin the program as soon as desired. From the day of the receipt of all application documentation, admission notifications are usually sent within three weeks.

Prescott applicants should submit their application to:

Embry-Riddle Aeronautical University
Graduate Admissions Office
3700 Willow Creek Road
Prescott, AZ 86301-3720
(800) 888-3728 -or- (928) 777-6600
fax: (928) 777-6613
email: prmsss@erau.edu
<http://www.erau.edu/pr/degrees/>

U.S. Citizens and Permanent Residents of the U.S.

All applicants must submit the following items to the Graduate Admissions Office prior to the application deadline:

1. **Completed application form** and the \$50 application fee. Please note: Permanent residents must provide a photocopy of their ARC (Alien Registration Card).
2. **Transcripts.** Official sealed transcripts for all college coursework earned (both graduate and undergraduate). Transcripts must be sent directly from the institutions attended to Embry-Riddle Graduate Admissions. A minimum of a bachelor degree is required.
3. **Course descriptions** for all graduate coursework to be considered for transfer.

Graduate Admissions

4. **Statement of objectives.** The statement of objectives is an important part of your application. You should give your reasons for wishing to do graduate work in the field you have chosen, incorporating your interests and your background as well as your long-term professional goals, defining how Embry-Riddle's Master of Science in Safety Science program can support those interests and goals. This should be at least three or four paragraphs.
5. **Three graduate applicant reference forms**, two academic and one professional.
6. **Resume.** A current resume outlining your education, work experience, special activities, and awards.
7. **Assistantships.** If interested in assistantship opportunities, submit an assistantship application declaring your interest in research, teaching, or administrative fields. Indicate any special skills that you feel may qualify you for an assistantship. To be eligible for an assistantship, a student must have a minimum 3.00 GPA in their undergraduate degree and have full graduate status (conditional admission eliminates a student from eligibility until all conditions are removed).

Special Requirements for International Applicants

Embry-Riddle is authorized under federal laws to enroll nonimmigrant alien students. An international applicant is defined as a nonresident, nonimmigrant applicant entering the U.S. on a nontourist visa.

In addition to the above required documents, **international applicants must also submit the following:**

1. All applicants whose native language is not English, or who were educated at schools where English was not the language of instruction in all disciplines, must submit their official TOEFL scores sent directly from the testing authority. The minimum acceptable score is 550 written/213 computer-based/79 iTOEFL.
2. In addition to official sealed transcripts, for any transcript not in English, a notarized English translation must also be submitted.

I-20 Requirements for International Students

Upon application, international students who require an initial or renewed student visa must submit the following:

1. Affidavit of Financial Support.
2. Supporting bank letter verifying appropriate funds on deposit. Please refer to the student's acceptance packet for the specific dollar amount requirement. This amount will reflect the amount needed to cover tuition, fees, books, health insurance, and living expenses for one year, plus \$3,000 for each accompanying dependent. In the case of sponsored students, an official notification of public or private sponsorship will take the place of a bank letter. A University assistantship contract does not relieve a student from the requirement to provide both a financial affidavit and a supporting bank letter, unless waived by the appropriate University official. International students must be fully prepared upon arrival on campus to meet all normal living expenses and manage their finances for the period of time required to complete the degree.

3. The I-20 Form must be in the student's possession before departure and be presented to the nearest U.S. embassy or consulate to obtain the necessary entry visa before departure to the U.S.

The I-20 will be issued to the student upon admission to the University if all required documentation has been received.

Transfer students should seek the assistance of the international student advisor at their current university to assist them with the transfer procedures. Upon receiving their admission letter, transfer students should contact their current school's International Student Service Office and request that their SEVIS record be released to Embry-Riddle at the end of their last semester at their current school. This will allow our admissions office to issue a new I-20.

Admission Time Limit

Applicants who have been accepted for admission into Embry-Riddle graduate programs must enroll in Embry-Riddle graduate courses within one year from the date of the semester for which they were accepted. Those who do not enroll in the specified time period must reapply for admission according to the regulations and procedures in effect at the time of reapplication.

A student who cancels the application at any point in the application process may reactivate the application at any time up to one year from the date of application. After one year, a new application, fee, and supporting documents must be submitted.

Admission Deposit

At least 30 calendar days prior to matriculation, admitted students must submit a \$200 tuition deposit.

The deposit will be held in the student's account for one year and will be credited toward tuition during the first semester of attendance. After one year, if a student has not matriculated, the deposit is forfeited.

Credit for Prior Academic Work and for Courses Taken at Other Institutions

Students applying prior academic work toward their Embry-Riddle graduate program requirements must submit appropriate documentation for such credit as part of the admission process. The request must be in writing and be accompanied by official transcripts or equivalent evidence of such work. Requests must be approved by the academic department chair or their designee.

Prior academic work and courses taken at other institutions by veteran students and/or other eligible students receiving Veterans Education Benefits will be evaluated and credit granted as appropriate and will be reported to the DVA as required by law.

Credit (called transfer credit) may be received for graduate work done at another appropriately accredited college or university.

Credit (called escrow credit) may be received for certain graduate courses taken by Embry-Riddle undergraduates.

Credit may be received for certain graduate courses taken as non-degree graduate work or as part of another (completed or non-completed) Embry-Riddle graduate degree program. When transferring from one Embry-Riddle graduate program to another, prior course work will be evaluated on a case by case basis. This credit may include prior work on a GRP or thesis.

The combined total transfer credit

Graduate Admissions

applied to an Embry-Riddle graduate degree may not exceed 12 credit hours.

In order to satisfy a graduate degree program requirement, the academic work for which such credit is sought must be determined to be specifically relevant to the applicant's graduate degree program at Embry-Riddle. The content of the applicable course or other program should be used to determine the nature of the credit to be applied to the student's degree requirement. The appropriate Prescott academic department chair or designee shall make these determinations.

Credit will be granted only if the student demonstrated performance expected of a graduate student at Embry-Riddle; in the case of graduate courses, this normally means that the course was completed with a B or better (3.00 on a 4.00 system).

Credit for academic work used to satisfy the requirements of an undergraduate degree will not be accepted toward the requirements for a graduate degree.

Credit will generally be accepted only for courses that were completed in the seven-year period immediately preceding the date that the student begins classes.

Permission to obtain graduate credit for courses to be taken outside the University after matriculation must be granted by the academic department chair or designee.

The last nine hours of graduate credit on

a degree program must be earned at Embry-Riddle.

A student may not be enrolled in more than one graduate degree program. Upon completion of a Embry-Riddle graduate degree program, a student may elect to apply to another graduate degree program at this university. After meeting admissions requirements and receiving notification of acceptance, a student may request that up to 12 hours of credit be transferred to the new degree program if the hours are applicable to the newly elected degree program. The transfer of these hours is at the discretion of the appropriate college dean or their designee.

Intra-University Transfer

Graduate students who have matriculated on either the Daytona Beach, Prescott, or Worldwide Campuses who are continuously enrolled students, and who have met their financial obligations on the campus where they matriculated, may transfer from one campus to another. Transfers are not automatic and certain conditions must be met. Additionally, a vacancy must exist in the program to which the student wishes to transfer, either permanently or as a visiting student.

Students are urged to begin this process at least 45 days before the first day of classes in order to avoid any interruption in the progress toward their degree.

UNDERGRADUATE ACADEMIC REGULATIONS AND PROCEDURES

Undergraduate Regulations and Procedures

All Embry-Riddle students are responsible for knowing all academic regulations and procedures required for continued attendance at the University. Academic regulations and procedures are presented in University publications such as this catalog, the Student Handbook, the Flight Operations Manual, the Residence Hall Regulations pamphlet, the Curriculum Manual, and the Academic Policies and Procedures Manual. These documents are available for reference at campus records offices, student government offices, and academic departments throughout the University. A student who requires clarification of any policy or regulation should seek help from their academic advisor, program/department chair, or the Records Office. University regulations will not be waived because a student pleads ignorance of established policies and procedures.

The University reserves the right to change curricula and academic regulations and procedures without notice or obligation. Such changes are updated to the official electronic catalog and published in the next catalog.

Students should consult the graduate section of this catalog for academic policies and regulations regarding graduate programs.

Academic Advising

All new students are assigned an academic advisor. Academic advisors help students choose and schedule courses to meet their educational goals.

Academic advisors post their scheduled office hours and students should call on them frequently and whenever assistance is needed.

Schedule of Classes and Registration

Students are required to register for each semester of enrollment and are encouraged to do so via Web registration. First-year students and students in academic difficulty will be denied access to Web registration and must first see their advisor for approval of course selection prior to registration. Registration must be completed and payment of all tuition deposits and fees must be made according to instructions published in the Financial Handbook by the Bursars Office. Students are not officially enrolled until they complete all phases of registration, including financial requirements.

Penalties will be charged for late payment of fees. Registration will continue through the first five class days of the semester if circumstances prevent the student from registering during the regular registration period. Except for flight courses, registration will not be allowed after the fifth class day of the semester. Special circumstances can be appealed through the dean of the student's college. Due to the scheduling requirements associated with flight training, flight course registration continues throughout the semester.

A schedule of classes is prepared for each semester. The University reserves the right to make necessary and appropriate adjustments to the published schedule to include cancellation or rescheduling of any class.

Undergraduate Academic Regulations and Procedures

Class Attendance

Because regular attendance and punctuality are expected in all courses, attendance may be included in the grading criteria of an individual class. Absences are counted from the first scheduled meeting of the class. Students that do not attend the first week of classes without notifying their instructors will be dropped from the course.

Because minimum contact hour requirements have been imposed by the FAA for certain classes leading to FAA certificates, attendance requirements in those courses are rigorously enforced. Explanations for all absences should be given to the instructor in advance whenever possible.

A final examination is normally given in each course at the end of the semester. A student who misses a final examination without advance permission from the instructor may be assigned a failing grade (F) for the course. A grade of incomplete (I) may be given if the student has obtained advance permission from the instructor or can provide satisfactory evidence that the absence could not be prevented.

Academic Integrity/Conduct

Embry-Riddle is committed to maintaining and upholding intellectual integrity. All students, faculty, and staff have obligations to prevent violations of academic integrity and take corrective action when they occur. The adjudication process will include the sanction imposed on students who commit the following academic violations, which may include a failing grade on the assignment, a failing grade for the course, suspension, or dismissal from the University:

1. Plagiarism: Presenting as one's own the ideas, words, or products of another. Plagiarism includes use of any source to

- complete academic assignments without proper acknowledgment of the source.
2. Cheating is a broad term that includes the following:
 - a. Giving or receiving help from unauthorized persons or materials during examinations.
 - b. The unauthorized communication of examination questions prior to, during, or following administration of the examination.
 - c. Collaboration on examinations or assignments expected to be individual work.
 - d. Fraud and deceit, which include knowingly furnishing false or misleading information or failing to furnish appropriate information when requested, such as when applying for admission to the University.

Students exhibiting the following undesirable acts of conduct may be suspended or dismissed from the University. Criminal acts must be reported to the appropriate law enforcement and University authorities.

1. Unauthorized alteration or misuse of one's own or another's academic records or transcripts.
2. Forging, altering, falsifying, destroying, or unauthorized use of a University document, record, or identification. This includes using the logo, stationery, or business cards of the University or otherwise identifying oneself as an agent of the University for personal, non-University business.
3. Misuse of computing facilities and/or security violations, including attempted violations of computing facilities.
4. Conduct that disrupts the educational process of the University.

Undergraduate Academic Regulations and Procedures

Unit of Credit

Semester credits are used throughout the University system. Transferred quarter hours will be converted to semester credit hours on the following basis: A quarter hour equals two-thirds of a semester hour.

Course Load Status

Enrollment in 12 credit hours constitutes the minimum load for full-time student status during the fall and spring semesters. The minimum load for full-time student status during each summer term is 6 credit hours. Students enrolled in fewer credits than the minimum full-time load are classified as part-time. All audited courses and courses taken for credit are counted in determining the student's load for a semester.

The maximum credit hour load is 16 credit hours for spring or fall semester or 9 credit hours for summer term. Students may register for an overload of hours with advisor approval. A student with more than 27 completed ERAU credit hours and a cumulative GPA of 3.00 or higher may register (with advisor written approval) for up to 18 credit hours in a fall or spring semester, with no increase in tuition for hours over the block. Registration for credit hours over 18 will be charged at the per credit hour rate. Registration for the additional credit hours above 16 must be completed at the Office of Records and Registration. The completed credit hours and cumulative GPA will continue to be calculated until the semester start date. A preregistered student's tuition may be recalculated if there is a change in the cumulative GPA or number of completed credit hours.

Classification of Students

Students are classified at the end of each semester based on the total number of credit hours earned in accordance with the following schedule:

First-Year:	fewer than 28 hours
Sophomore:	28-57 hours
Junior:	58-87 hours
Senior:	88 hours or more

Grading System

The following indicators, used on grade reports and transcripts, signify the quality of a student's academic performance.

Letter Grade	Student Performance	Grade Points/Credit
A	Superior	4
B	Above average	3
C	Average	2
D	Below average	1
F	Failure	0
AU	Audit	0
I	Passing but incomplete	0
IP	In progress	0
P	Passing grade (credit)	0
S	Satisfactory (noncredit)	0
X	Advanced standing credit granted for experience outside the University	0
T	Transfer credit	0
N	No grade submitted by instructor	0
W	Withdrawal from a course	0

Undergraduate Academic Regulations and Procedures

WF	Withdrawal from the University - Failing	0
XP	Course Equivalency Examination passed & advanced standing granted	0

Grade Reports

Final grades are issued at the end of each semester. Students can access their grades immediately after they are posted, via Student Online Services. Students who have specifically requested a hard-copy grade report and supplied an address to the Records Office will be mailed an unofficial copy of their transcript.

The University is prohibited from releasing grade information without the express written authorization of the student. Such authorization must be granted each semester because blanket authorizations are prohibited by law.

Grade Point Averages: GPA, CGPA

A semester grade point average (GPA) and cumulative grade point average (CGPA) are computed for each student after every semester. The GPA is calculated by dividing the number of grade points earned during the semester by the number of hours attempted in that period. The CGPA is determined by dividing the total number of grade points by the total number of hours attempted at the University. Grade points and hours attempted are accrued in courses graded A, B, C, D, F, and WF only.

Dropping a Course

Students may drop a course, with no notation of course enrollment on their tran-

scripts, during the drop period only. The drop period extends through the third week of spring and fall semesters and the second week of summer terms.

Auditing a Course (AU)

Because students audit a course solely to enhance their knowledge, academic credit is not granted toward degree requirements for audited courses. Students may change their registration from audit to credit through the first five class days of the semester or the first three days for summer terms. Change from credit to audit requires an instructor's signature until the last day of the withdrawal period: through the tenth week of the semester or the fourth week of the summer term. When a student auditing a course fails to maintain satisfactory attendance, as determined by the instructor, a grade of W will be assigned.

Withdrawing from a Course (W)

Students receive the grade W if they withdraw from a course by the end of the tenth week of spring and fall semesters and the fourth week of summer terms. If they withdraw from a course after this period, they receive an F. If students stop attending their classes and fail to withdraw from the University, an F is assigned for each course in which they were enrolled.

Students who withdraw from a flight course before their initial attempt at the final phase check receive a W.

Students may not drop or withdraw from a basic skills course without written permission from the chair of the department offering the course.

Students are not permitted to drop or withdraw from a course while a charge of academic dishonesty is pending.

Withdrawal from the University

Students who leave the University for any reason must conduct an exit interview with the academic advisor in their college and officially process a withdrawal clearance through the Records Office. When a student withdraws from the University after the end of the scheduled withdrawal period, the end of the tenth week of the semester, or the end of the fourth week of summer terms, a WF grade will be assigned for all courses in which the student is enrolled unless an exception is granted for medical reasons or other extenuating circumstances.

Incomplete Grades (I)

In exceptional cases, faculty may assign the temporary grade of incomplete (I) if a student is unable to complete the required work in a course because of medical emergency, death in the family, military duty, or other extenuating circumstances. If a student does not complete the course by the end of the fourth week of the subsequent semester, the incomplete (I) automatically converts to an F.

Incomplete Flight Courses (IP)

Because the length of time required to complete flight courses varies and may not coincide with the end of the academic semester, the temporary grade IP is assigned for flight courses in which students are still actively flying. The grade of IP will be maintained until such time as the student completes the course and receives a letter grade.

Flight students may receive an F for excessive unexcused no-shows.

Repeating a Course

With the exception of flight courses, which may be repeated only once, a student may repeat any University course. The grade for each attempt will appear on the student's permanent academic record. In determining the student's CGPA, the grade for subsequent attempts at a course replaces the previous grade a maximum of two times. Only the last grade counts toward course completion.

Course Equivalency Exams

Students who believe they possess sufficient knowledge and who have not previously failed that particular course may apply to take the course equivalency examination for a limited number of courses. Course equivalency examinations must be completed prior to the time the student reaches the last 30 credits for a bachelor degree.

A nonrefundable fee is charged for administering each equivalency exam. Because students may take a course equivalency exam only once for each course, those failing a course equivalency examination must enroll in and complete the course to receive credit. Students wishing to take course equivalency exams must submit their applications to the chair of the academic department offering the course.

Dean's List and Honor Roll

Students who have demonstrated academic excellence during a semester receive a letter and certificate with a notation placed on their academic transcript by the Records Office. To be eligible for semester honors, students must be enrolled full-time, have completed all coursework for the semester, maintained at least a 2.00 CGPA, and must

Undergraduate Academic Regulations and Procedures

not have received a D or F during the semester. In addition, students must have achieved a semester GPA of 3.50-4.00 for inclusion on the Dean's List or 3.20-3.49 for inclusion on the Honor Roll.

Academic Warning, Probation, Suspension, and Dismissal

Warning

A student whose cumulative grade point average (CGPA) is less than 2.00 for one semester will be placed on academic warning. The academic program of a student on warning may be restricted by the College dean or designee.

Probation

A student whose CGPA is less than 2.00 for two consecutive semesters will be placed on academic probation. Students on probation are classified as students not in good standing and may not serve as elected members of the Student Government Association, may not participate in intercollegiate athletics as members of a University team, may not serve on the editorial staff of a campus publication and may lose eligibility for financial aid programs. The academic programs of students on probation may be restricted. Students who are placed on academic probation will be allowed to complete any flight course in which they are currently enrolled. However, they will not be allowed to enroll in subsequent flight courses until they return to good academic standing. A student who has a semester GPA of less than 1.00 may be placed on academic probation or suspension in accordance with University academic policies.

Suspension

A student whose CGPA is less than 2.00 for three consecutive semesters, or a student on academic probation whose CGPA at the end of the subsequent period is below 2.00, will be suspended from the University unless the student maintains a semester GPA greater than 2.00. A student who has a semester GPA of less than 1.00 may be placed on academic probation or suspension.

Dismissal

A student suspended for academic reasons and subsequently readmitted will be on probationary status until the CGPA has been raised to 2.00. If the semester GPA falls below 2.00 during the probationary period, the student will be dismissed. Any previously suspended and readmitted student who has been restored to good standing and whose academic performance subsequently deteriorates to a level that would qualify for initial suspension will be dismissed.

Students desiring to appeal an academic dismissal must submit a petition within 30 calendar days of notification, to the Director of the Records Office. The Director will forward the petition to the student's College Dean. The student will provide documentation to the Dean and may appeal in person. The Dean will provide a decision, along with stipulated conditions for a dismissal reversal if appropriate. If the student is allowed to return, the dismissal statement will be removed from the student's transcript.

The Dean is the final authority in the dismissal process. Once confirmed, the Academic dismissal is final and the student will not be readmitted to the University.

Suspension and Dismissal for Cause

The University reserves the right to suspend or dismiss a student at any time and without further reason, if the student exhibits the following undesirable conduct:

1. Actions that pose a risk to the health, safety, or property of members of the University community, including, but not limited to, other students, faculty, staff, administrative officers, or the student himself/herself;
2. Conduct that disrupts the educational process of the University;
3. Any other just cause.

Readmission

A student who has been suspended from the University for any reason must apply for readmission to the campus and college from which they were suspended.

A student who has been academically suspended may apply for readmission after 12 calendar months following the suspension or after completing a minimum of 15 hours of academic credit with a CGPA of 2.50 or higher from an accredited institution. If the University readmits such students, they will be admitted with probationary status.

Areas of Concentration and Minor Courses of Study

Areas of concentration give students specialized preparation in a degree program. Minor courses of study are coherent academic programs designed to satisfy students' personal interests and to meet their professional needs. Students may consult with their

program chairs or advisor if assistance is needed in choosing areas of concentration or minors. Once a decision is reached, students who wish to declare an area of concentration or minor should contact the Records Office. Some minor courses of study are not open to students pursuing particular degree programs. A minor must be in a discipline outside the student's major field of study.

The student becomes subject to the requirements of the minor as stated in the catalog in effect at the time the minor is declared. The department chair responsible for a particular minor determines how students fulfill deficits in credits for a minor and certifies that students are qualified to receive the minor.

Areas of concentration and minor courses of study are posted on the student's academic transcript at the time the student graduates with a baccalaureate degree.

Change of Degree Program

Students may apply to change their degree programs if they meet academic qualifications and if the degree program is not at capacity. Students should contact their current department chair to initiate the application.

When a student elects to change degree programs, or minors within a degree program, the requirements of the catalog in effect at the time the request was approved apply. Students considering such changes should contact their academic advisor or department chair to determine how they will be affected.

Two Degrees of the Same Rank

A student may pursue more than one bachelor's degree concurrently and must

Undergraduate Academic Regulations and Procedures

declare which is to be considered the primary degree, for graduation purposes. For awarding of two bachelors degrees, students must complete all of the required courses for both degrees. The second degree must contain a minimum of 25% more credit hours than is required for the primary degree; at least two-thirds of the additional hours must be in upper division (300-400) courses; at least 60 credit hours must be completed in residence at the University

Continuous Enrollment

Students are considered to be continuously enrolled, regardless of the number of hours for which they register, unless they:

1. Enroll at another institution without advance written approval.
2. Fail to enroll in at least one course at Embry-Riddle in any two calendar year period.
3. Have been suspended or dismissed from the University.

Students failing to maintain continuous enrollment for any reason are required to reapply for admission under the catalog in effect at that time.

Catalog Applicability

The catalog in effect at the time of a student's first semester of study remains applicable as long as the student remains in the original degree program.

If a student does not maintain continuous enrollment at the University, they must apply for readmission. The provisions of the catalog in effect at the time of readmission then become applicable to the student.

Curricular requirements stated in the

applicable catalog will not be affected by subsequently published addenda to that catalog or by later catalogs unless the student elects to graduate under the provisions of a later catalog or addendum. Students electing to graduate under the provisions of a later catalog or addendum must meet all requirements (admission, transfer, graduation, and so on) contained in that catalog or addendum.

Attendance at Other Institutions

Once admitted to the University as degree candidates, students are expected to complete all work to be applied toward their degree with the University unless advance written authorization is granted.

Students in good academic standing must petition to receive credit for courses or training, including flight instruction, outside the University while maintaining enrollment at Embry-Riddle. Approval for flight instruction taken away from Embry-Riddle must be obtained, in writing, from the Flight Department.

To initiate this procedure, students must process a Petition to Take Courses at Another Institution. Students must provide adequate evidence that the petitioned courses are equivalent to Embry-Riddle courses or are acceptable as elective credit in their degree program. The Records Office evaluators will determine if the requested courses are equivalent and notify the student by returning the approved petition. After the courses are deemed equivalent, the petition is evaluated considering such factors as the reasons for petitioning and the availability of the courses in the University curriculum prior to approval. A course taken at another

Undergraduate Academic Regulations and Procedures

institution will not replace the grade of a previously completed Embry-Riddle course.

Students may not co-enroll at a local institution. Under certain circumstances, students may be allowed an exception to take courses at a local institution. If a student is nearing graduation and if schedule conflicts and/or course availability would unduly delay completion of degree requirements, the student may petition for a waiver from their College Dean or designee.

After initial matriculation, students may not earn more than 18 semester hours (or the equivalent) at another institution. The last 30 hours toward a bachelor's degree must be completed in residence at Embry-Riddle.

Graduation Requirements

Students must complete the general graduation requirements as prescribed by the University, as well as all degree requirements specified in the degree being pursued. The following summary of graduation requirements is provided for all students:

1. Students must initiate an application for graduation. The application must be received by the Records Office within the time limit established by that office.
2. Students must successfully complete all required courses for a particular degree listed in the applicable catalog.
3. Students must successfully complete the minimum number of credit hours required for the degree as listed in the applicable catalog.
4. Students pursuing a baccalaureate degree must complete the last 30 credit hours at the University.
5. Students pursuing a baccalaureate degree must complete a minimum of 40 credit hours in upper-division (300 and 400 level) courses. Credit transferred from other institutions will be accepted at the discretion of Embry-Riddle.
6. For degree completion, at least 25 percent of semester credit hours must be earned through Embry-Riddle instruction.
7. Students pursuing any undergraduate degree must earn a minimum cumulative grade point average (CGPA) of 2.00 for all work completed at the University. Candidates for the Bachelor of Science in Aerospace Engineering, Computer Engineering, Electrical Engineering, and Mechanical Engineering must also earn a minimum CGPA of 2.00 in all required core courses. Details are specified under the degree requirement headings of the Academic Programs section in this catalog.
8. Students will not be issued a diploma or transcript of their records until all debts or obligations owed to the University have been satisfied.
9. Students will not be issued a diploma while on disciplinary probation.
10. Students will not be permitted to participate in the formal graduation ceremony until all the degree requirements listed above have been satisfied or a waiver has been approved by the student's College Dean. Students anticipating a summer degree completion may participate in the spring ceremony if they meet established guidelines.
11. Under no circumstances will an official diploma be awarded, or the student's transcript annotated as complete, until

Undergraduate Academic Regulations and Procedures

all of the degree requirements indicated above have been satisfied and grades for all enrolled courses prior to degree completion have been posted to their transcript. Students enrolled in courses whose term ends after the graduation date (or beyond the incomplete period) will degree complete with the next scheduled graduation date.

12. Diplomas are mailed to the address provided by the student.

Graduation Honors

Graduation honors recognize students who have demonstrated excellent performance throughout their Embry-Riddle academic career. They are only awarded to students who complete baccalaureate degree programs. To be eligible, the student must have completed at least 45 credit hours in residence. The level of graduation honors will be based on the cumulative grade point average for all courses taken at Embry-Riddle. The honors level will appear on the student's academic transcript with the degree information.

Graduation honors (baccalaureate only) will be awarded in accordance with the following criteria:

Honors Level	CGPA
Summa Cum Laude	At least 3.90
Magna Cum Laude	At least 3.70 and less than 3.90
Cum Laude	At least 3.50 and less than 3.70

Transcript Requests

A signed request for an academic transcript, accompanied by a fee, must be submitted by the student to the Records Office. Transcripts will not be released to students who have

failed to meet their financial obligations to the University. Students may request the delivery of an electronic transcript via the Scrip-Safe Transcripts on Demand website: <https://iwantmytranscript.com>.

Privacy of Student Records

The University respects the rights and privacy of students in accordance with the Family Educational Rights and Privacy Act (FERPA). The University may disclose certain items of directory information without the consent of the student, unless the student submits a written non-disclosure request. Students are required to file requests for non-disclosure with the Records Office. Non-disclosure forms remain in place permanently, unless the office is notified otherwise.

Directory information consists of: student name; permanent or local mailing addresses and telephone numbers*; ERAU e-mail or box address; non-ERAU email addresses or account information*; date of birth*; major courses of study and areas of specialization; dates admitted, attended, and graduated; enrollment and class status; campus, school or college attended; degrees sought or earned and dates received or anticipated; awards, honors, and special programs or recognitions; most recent previous school attended; for student athletes and scholarship recipients the ERAU ID and photograph; factual disciplinary history, including results of pending disciplinary processes at time of withdrawal*; information from public sources.*

*These Directory information items may be released without student consent, but only for compelling reasons and only with advanced approval of the Registrar.

The University shall obtain written consent from students before disclosing any personally identifiable information from their

Undergraduate Academic Regulations and Procedures

education records with the exception of the directory information. The receipt of a written request to release an education record via FAX satisfies this requirement. Such written consent must:

1. Specify the records to be released.
2. Specify the purpose of the disclosure.
3. Identify the party or class of parties to whom disclosure may be made and their address.
4. Be signed and dated by the student or former student.

The law authorizes students and former students the right to inspect and review information contained in their education records. The student must submit a written request to the Records Office. The Records Office must make the records available for inspection and review within 45 days from the request. FERPA allows disclosure of educational records or components thereof under certain conditions. Students desiring additional information regarding FERPA may contact the Records Office.

Flight Course Related Information

All flight training at Embry-Riddle is done in late model, fully equipped aircraft. In addition, procedures trainers and flight-training devices give the student a safe, flexible, and cost-effective training environment. The flight-training program operates under all applicable FAA rules, regulations, and requirements. The student is responsible for adhering to those rules, regulations, and requirements, which are contained in the Embry-Riddle Flight Operations Manual and

local campus bulletins.

While flight training is an integral part of the Aeronautical Science program, it is also contained in other degree programs, either as an area of concentration, minor course of study, or as elective credit on a space-available basis. Students should investigate the applicability of certain courses to their program along with the necessary prerequisite/corequisite course requirements prior to making any commitment and investment.

Flight Course Scheduling

Students usually begin their initial flight course sometime during their first year in attendance. The exact start date depends on the academic preparation of the student, student desire, weather conditions, and aircraft and instructor availability. The length of time required to complete a course will also vary based on these same factors. All flight-training courses may begin and end at any time during the academic year and may not coincide with the beginning and ending dates of the published semester schedule. Therefore, students who begin a flight course late in the semester should be prepared for training in that course to continue into the next semester.

Flight courses require a minimum block of time and may include flying on weekends. Study, preparation, and some flight lessons may require time outside this block. Students, particularly beginning students, are cautioned not to overload their course schedules when taking a flight course.

Newly matriculated/enrolled flight students who possess the FAA Private Pilot Single Engine Airplane certificate, must register for AS 109 and FA 109. Similarly, students with the FAA Private Pilot Rotorcraft

Undergraduate Academic Regulations and Procedures

certificate (or higher) must register for AS 145 and FH 145. During the Add/Drop period at the beginning of the semester, they will be given the opportunity to take the final comprehensive examination for AS 109 or AS 145. If they pass with a grade of 70% or higher, they will be withdrawn from that class and permitted to enroll in the next higher class (AS 221 Instrument Airplane or AS 252 Instrument Helicopter, AS 372 Commercial Helicopter or AS 442 CFI/CFII Helicopter). Note: This course challenge can only be taken during the posted Add/Drop period posted by the Records Office for that semester. All new students who hold a Private Pilot certificate for Airplane Single Engine Land must enroll in FA 109 and all certified helicopter students must enroll in FH 145 for transition flight training.

See the Embry-Riddle Flight Operations Manual for additional information on flight line policies and procedures.

Credit for Flight Training at Other Institutions

All students desiring to complete off-campus flight training for credit after matriculation must be approved in writing in advance by the Flight Department. The credit will be awarded as advanced standing, and the procedures for requesting credit when training is completed will be specified in the written approval (Off Campus Authorization Form). The following general rules apply as specified under each heading. Please address any questions to the Flight Department.

B.S. in Aeronautical Science

The Aeronautical Science (AS) degree is accredited by the Aviation Accreditation Board International (AABI) and is governed by the following criteria. Aeronautical

Science students will be awarded credit for FAA certificates held prior to matriculation to Embry-Riddle and may be approved to complete one certificate or rating if flight training from an appropriately rated instructor was logged prior to matriculation. If FAA certificates are held, this training must have occurred after the attainment of the most recent certificate for which credit is granted. Except as provided above, after a student matriculates, all flight training must be completed at Embry-Riddle or approved at another AABI flight education accredited college or university. In all cases, students must satisfactorily complete at least one flight course on campus after advanced standing is awarded or AABI approved courses are transferred.

Flight Minors or Areas of Concentration

Individuals pursuing areas of concentration and minor courses of study that require a flight (FA or FH) course must satisfactorily complete at least one FA or FH course on campus after completion of the approved off-campus flight training. If students declare a change of program to the B.S. in Aeronautical Science degree, the advanced standing credit for flight training after matriculation may not transfer.

Open Elective Credit

Students who are not pursuing the B.S. in Aeronautical Science degree, Flight minor, or AOCs requiring FA courses, and who desire to complete off-campus flight training for credit after matriculation must receive approval by the Flight Department in writing and in advance of the anticipated training. If students declare a change of program to the B.S. in Aeronautical Science degree, the advanced standing credit for flight training after matriculation may not transfer.

Undergraduate Academic Regulations and Procedures

Transferring to a Flight minor or Area of Concentration would necessitate satisfactorily completing at least one FA course on campus after the awarding of transfer credit and advanced standing.

Awarding Advanced Standing

Upon completion of the approved flight training, all students must show their copy of the approved Off Campus Training Authorization Request Form, in addition to the appropriate documents of their training, to the Flight Department. Approved advanced standing credit will be applied to the student's transcript. See above restrictions regarding change of programs, AOC, and minor courses of study.

Aviation and Transportation Security Act

The Aviation and Transportation Security Act (ATSA) requires students registered for Flight (FA) courses to show acceptable documentation of U.S. citizenship OR complete background check requirements.

Students enrolled in an FA course must present ONE of the following to the Records Office prior to being allowed to start flight training:

1. A valid, unexpired U.S. passport
2. An original birth certificate with raised seal documenting birth in the U.S. or one of its territories
3. An original U.S. naturalization certificate with raised seal, Form N-550 or Form N-570
4. An original certification of birth abroad, Form FS-545 or Form DS-1350/FS 240 Consular Report of Birth

-OR-

An original certificate of U.S. citizenship, Form N-560 or Form N-561.

If using other than a valid passport, a valid driver license with a photo or a government-issued photo ID will also be required. Photocopies of the above are not acceptable, even certified copies. This process needs to be completed only one time for the entire curriculum at Embry-Riddle.

Those unable to complete the above requirements, including international and permanent resident alien students, will be able to register for FA courses but must comply with U.S. Department of Homeland Security (DHS) notification requirements. Before receiving any flight training, they must provide DHS, through the Transportation Security Administration (TSA) a set of fingerprints and an online application, including identification and a processing fee and be granted permission to initiate training. This information and fee, but not the fingerprints, must be sent prior to beginning each initial rating during flight training and will be coordinated through the Flight Department Records office. Please contact the International Students Office or the Flight Department for more information.

Once the student is registered and has received authorization from the TSA, the student may begin training. Some advanced flight courses may require a waiting period of up to 30 days. If Embry-Riddle receives any directive from the DHS or TSA, the student may be administratively withdrawn as appropriate to the DHS or TSA directive.

Mandatory Student Drug Testing

Success in the aviation industry requires a

Undergraduate Academic Regulations and Procedures

commitment to excel and the discipline to avoid unsafe practices. The use of illegal, synthetic or designer drugs constitutes an unsafe practice and is incompatible with an aviation environment. Therefore, the University reserves the right to immediately suspend or dismiss any student who uses or possesses illegal, synthetic or designer drugs. In the effort to maintain a work and educational environment that is safe for its employees and students, the University has established a mandatory student drug testing program.

Scope

The drug testing program applies to all students who engage in flight training at the University. The University tests for drugs, alcohol and any other substance which may compromise safety as follows:

1. Random testing of students engaged in flight training.
2. Required post-accident testing for students involved in an aircraft accident. Students are tested for drugs within 32 hours after an accident. An accident is defined as any occurrence associated with the operation of an aircraft that results in any person suffering death or serious injury, or where the aircraft receives substantial damage as determined by the National Transportation Safety Board. The accident can occur at any point between the time a person boards the aircraft with the intention of flight and the time all have disembarked.
3. Pre-employment testing will be required for any student who applies to work in a safety-sensitive student assistant position at the University.
4. The University, in conjunction with judicial proceedings, may also require drug testing. Students will follow the guidelines outlined in the Student Handbook.
5. In the event that drug testing is required, students who fail to comply with testing procedures, refuse to be tested, or test positive for illegal drugs are subject to the following actions:
 - a. Students who fail to comply with all University directives concerning the place of testing, the manner in which they are to arrive at the test site, and any other related matters are subject to disciplinary action up to and including dismissal from the University.
 - b. Students who refuse to be tested after being requested to do so by the University will be dismissed from the flight program and possibly the University.
 - c. Students whose test results show positive for the use of an illegal, synthetic, designer or non-prescribed drug, as verified by a medical review officer, will result in dismissal from the Flight program and possible dismissal from the University.

Testing

The cost of drug testing is the responsibility of the University. Embry-Riddle has contracted with a professional testing service as the certified laboratory for the collection and analysis of test specimens. This testing service will adhere to all requirements for chain of custody, test reporting, and specimen retention in accordance with proposed DOT and FAA regulations.

Undergraduate Academic Regulations and Procedures

Notification

Students applying to attend the residential campuses are notified of the drug testing requirement through various University publications. The drug testing policy is also explained in the flight operations manual.

Medical Marijuana

Arizona voters recently approved the Arizona Medical Marijuana Act (Proposition 203), which, under certain circumstances, authorizes the possession and use of marijuana for medical purposes by people with debilitating medical conditions who obtain a written certification from a physician. Notwithstanding the passage of Proposition 203, because of the University's obligations under federal law, marijuana, including medical marijuana, will continue to be banned on campus. Additionally, campus health care providers, in accordance with federal law as well as University policies and regulations, will not prescribe medical marijuana.

Student Education and Assistance

Embry-Riddle promotes substance abuse awareness by sponsoring educational programs and distributing literature. The University is committed to assisting students in the resolution of problems associated with substance abuse and encourages students to seek additional help through referrals from the University Health Services and Counseling Offices.

Student Grievance Procedure

It is the policy of Embry-Riddle to administer its educational programs in a fair, equitable, academically sound manner and in accordance with the appropriate regulations and criteria of its governing board, accredit-

ing associations, and federal and state laws and regulations. To this end, students are provided an opportunity to express any complaint, grievance, or dispute that, upon investigation, may be remedied.

Students are first encouraged to address their grievance, whether personal or academic, directly with the appropriate faculty/staff member with responsibility concerning the issue. This is considered an "informal" process and is meant to empower the student to confront the source of their concern, as well as minimize the length of time involved in achieving a resolution. If no agreement is reached, students may choose to put their grievance in writing directly to the next appropriate department head or director with responsibility for the area of concern. Students may seek assistance from the Dean of Students office to file and process a formal written grievance. Any student, at any time, may choose to file a formal written grievance with the Dean of Students office. The Dean of Students office will provide advice and guidance to students who present grievances or complaints, whether personal or academically related. Appeals concerning previously assigned grades are specifically addressed through the academic administrative chain, beginning with the course instructor (See Grade Appeal Process).

Formal Process

University committees/boards, which include student members, are available to process formal appeals when the informal mechanisms have been exhausted.

Academic Issues / Student Status

The Academic and Admissions Standards Committee is an appeal board designated to resolve any conflict with Academic

Undergraduate Academic Regulations and Procedures

Procedures or Policies. This committee makes recommendations to the Academic Deans. Additional information regarding the Academic and Admission Standards Committee, including how to initiate the process, may be obtained at the Records Office.

Grade Appeal Process

Students are first encouraged to informally address their issues of concern regarding grades with the course instructor. If a resolution cannot be reached, students may initiate the formal procedure by submitting a Final Course Grade Challenge form to the Chair of the department responsible for the course, outlining the reasons in detail. The student is encouraged to discuss the grade challenge with the department chair for a solution at this level. The student may obtain the Final Course Grade Challenge form and instructions from the Records Office or the Department Chair. This form must be submitted to the appropriate Department Chair no later than four weeks after the start of the subsequent semester (not including summer terms.)

Reference: Prescott Academic and Administrative Policies 2-3

Student Rights/Disciplinary Appeals

The Student Affairs Student Conduct Board may be convened to consider cases of alleged misconduct in which a student appeals the

charges of misconduct brought against him/her. These are cases in which a student wants to request a review of Sanction Levels IV - VII imposed by a department or University personnel, or cases in which a student feels persons or agencies at the University have violated his/her rights. The Student Affairs Student Conduct Board is composed of faculty, staff and students. Students may elect to adjudicate an appeal through a University Administrator rather than the Student Affairs Student Conduct Board. The supervisor of the University Student Conduct officer that made the original decision may serve as the appeal administrator. Applications for hearing or appeal are available through the Dean of Students Office.

If the student complaint cannot be resolved after exhausting the institution's grievance procedure, the student may file a complaint with the Arizona State Board for Private Postsecondary Education.

The student must contact the State Board for further details.

Arizona State Board for Private
Postsecondary Education

1400 W. Washington, Room 260

Phoenix, AZ 85007

GRADUATE ACADEMIC REGULATIONS AND PROCEDURES

Graduate Regulations and Procedures

All University graduate academic and non-academic procedures and regulations are subject to change. Therefore, all procedures and regulations in effect at a given time may not be reflected in the current catalog. When such changes do occur, notice may be announced in the form of an addendum or the change will simply be incorporated into the next catalog. Catalogs are effective on the date published unless otherwise stated.

Student Responsibilities

Students are responsible for being fully informed about all procedures and regulations governing their participation in Embry-Riddle's graduate programs. The necessary information may be found in the appropriate sections of this catalog, the Student Handbook, orientation and information packets published and distributed by the campus, and periodic announcements published by the University. A student who requires clarification of any policy or regulation should seek help from his/her academic advisor or the Records Office. University regulations will not be waived because a student is unaware of established standards and procedures.

Academic Advising

Academic advisors help students choose and schedule courses that meet their educational goals.

Academic advisors post a schedule of office hours, and students should feel free to

call on their advisors when assistance or discussion is needed.

Registration

Students are required to register for each semester and are encouraged to use web registration. Tuition deposits, registration, and fee payments must be completed according to published instructions. Students are not officially enrolled until they complete all phases of registration, including financial requirements.

Registration will be allowed through the first five class days for fall and spring and the first three class days of summer terms.

Schedule of Classes

A schedule of classes is prepared for each semester. The University reserves the right to make necessary and appropriate adjustments to the published schedule to include cancellation or rescheduling of any class.

Academic Integrity

Embry-Riddle is committed to maintaining and upholding intellectual integrity. The faculty, colleges, divisions, or campuses of the University may impose sanctions on students who commit the following academic integrity violations.

1. Cheating: The use of inappropriate sources of information on a test or being a party to obtaining or possessing an examination before the time the examination is scheduled.
2. Plagiarism: Presenting as one's own the ideas, words, or products of another.
3. Forgery and unauthorized alteration

Graduate Academic Regulations and Procedures

or misuse of one's own or another's academic records or transcripts.

4. Knowingly furnishing fake or misleading information to the University when seeking admission to the University or campus.
5. Forging, altering, falsifying, destroying, or unauthorized use of a University document, record, or identification. This includes using the logo, stationery, or business cards of the University or otherwise identifying oneself as an agent of the University for personal, non-University business.
6. Misuse of computing facilities and/or security violations, including attempted violations of computing facilities.
7. Conduct that disrupts the educational process of the University.

Sanctions may include a failing grade on the assignment, a failing grade for the course, or dismissal from the University.

Exclusion from Courses

A student making no real progress in a course or whose behavior is detracting from the course may be excluded from the course by the appropriate dean or designee with a grade of W or WF. Students have five calendar days following written notification of this exclusion in which to appeal. Until the final disposition of the appeal, the student is considered enrolled in the course.

Course Loads

While full-time status is six credits, students are expected to carry nine credit hours per semester. Courses above nine credit hours require permission from the appropriate department chair. If a student demonstrates exceptional academic performance, the

department chair or designee may approve a maximum one-course overload. A student's enrollment may be restricted when deemed in the best interest of the student.

Grading System

The following indicators used on grade reports and transcripts signify the quality of a student's academic performance.

Letter Grade	Student Performance	Grade Points Per Credit Hour
A	Excellent	4
B	Satisfactory	3
C	Passing	2
F	Failure	0
WF	Withdrawal from the University-Failing	0
W	Withdrawal from a course	0
AU	Audit	0
I	Incomplete (Passing)	0
IP	In Progress	0
N	No grade submitted by instructor (also used for 690C GRP continuation course)	0
P	Passing grade (applies to the grading of the Graduate Internship, GRP, or Thesis)	0
T	Credit accepted by transfer	0

Grade Reports

Final grades are issued at the end of each semester. Students can access their grades immediately after they are posted through Student On-Line Services. Students who have specifically requested a hard copy grade report and supplied an address to the

Graduate Academic Regulations and Procedures

Records Office will be mailed an unofficial copy of their transcript.

The University is prohibited from releasing grade information without the express written authorization of the student. Such authorization must be granted each semester because blanket authorizations are prohibited by law.

Unit of Credit

Semester credits are used throughout the University system. Transferred quarter hours will be converted to semester credit hours on the following basis: A quarter hour equals two-thirds of a semester hour.

Grade Point Averages: GPA, CGPA

A semester grade point average (GPA) and cumulative grade point average (CGPA) are computed for each student after every semester. The GPA is calculated by dividing the number of grade points earned during the semester by the number of hours attempted in that period. The CGPA is determined by dividing the total number of grade points by the total number of hours attempted at the University. Grade points and hours attempted are accrued in courses graded A, B, C, F, and WF only.

Thesis Registration and Grading

Registration

1. A student is expected to register for at least one hour of thesis credit from the time the student begins the thesis until it is completed. Academic credit will be granted only for the number of hours designated in the Graduate Catalog for the thesis for the degree being pursued.
2. Students who register for thesis credit during the summer sessions must register for the entire summer (also known as “summer C”).
3. An interruption in thesis registration requires written approval in advance from the department chair or designee and is permissible only for educationally sound reasons and only if the student is not making use of University facilities or personnel. Failure to obtain permission will result in a change from IP to F for all thesis credits.
4. The maximum number of credits a student may take at the 700 level is seven. Special permission of the Chief Academic Officer is required to register for additional credits.

Grading

1. A student enrolled for a thesis will receive a grade each term, as determined by the student’s thesis committee. If the student is making progress toward completion of the thesis, a grade of IP will be issued. If the student has not made progress, a grade of F will be issued and will result in a change from IP to F for all thesis credits.
2. Upon completion of the thesis a final grade of P or F will be awarded. That grade will replace the IP for all terms in which the student was enrolled for the thesis course.
3. A student who receives a thesis grade of F and wishes to repeat the course must register for the number of thesis hours required by the degree program plus any continuation credit taken, up to a maximum of 7 hours.

Graduate Academic Regulations and Procedures

Graduate Research Project (GRP) Registration and Grading

Registration

1. The initial registration for the GRP course is three semester/term credit hours (course designation 690). Thereafter, the student is expected to register for one hour of GRP each term/semester until the GRP is completed (course designation 690C). Both 690 and 690C will appear on a student's transcript, but academic credit is only granted for 690.
2. Students who register for GRP during the residential campus summer sessions must register for the entire summer (also known as "summer C").
3. An interruption in GRP registration requires written approval in advance from the department chair or designee and is permissible only for educationally sound reasons and only if the student is not making use of University facilities or personnel. Failure to obtain permission will result in a change from IP to F for 690 and from IP to N for 690C.
4. Students may register for one additional consecutive semester/term only, unless approval is given by the Dean and CAO.

Grading

1. A student enrolled for a GRP will receive a grade each term, as determined by the student's project review committee. If the student is making progress toward completion of the GRP, a grade of IP will be issued. If the student has not made progress, a grade of F will be issued and will result in a change from IP to F for 690 and from IP to N for 690C.

2. Upon completion of the GRP, a final grade of P or F will be awarded. That grade will replace the IP for 690. All grades of IP will change to N for 690C.
3. A student who receives a GRP grade of F and wishes to repeat the course must register to repeat 690.

Internship Grading

A final grade of P or F is awarded upon completion of a graduate internship.

Dropping a Course

Students may drop a course, with no notation of course enrollment on their transcripts, during the drop period only. The drop period extends through the third week of spring and fall semesters and the second week of summer terms.

Auditing a Course (AU)

Because students audit a course solely to enhance their knowledge, academic credit is not granted toward degree requirements for audited courses. Students may change their registration from audit to credit during the add period only: the first five class days of spring or fall semester and the first three class days of summer term. They may change from credit to audit until the last day of the withdrawal period: the end of the tenth week for fall and spring and the end of the fourth week of summer terms. When a student auditing a course fails to maintain satisfactory attendance, as determined by the instructor, a grade of W will be assigned.

Withdrawing from a Course (W)

Students receive a grade of W if they withdraw from a course before the end of the

tenth week of spring and fall semesters and the end of the fourth week of summer terms. If they withdraw from a course after this period, they receive a grade of F. If students stop attending their classes and fail to withdraw from the University, a grade of F is assigned for each course in which they were enrolled.

Students are not permitted to drop or withdraw from a course while a charge of academic dishonesty is pending.

Incomplete Grade (I)

In exceptional cases, faculty may assign the temporary grade of incomplete (I) if a student is unable to complete the required work in a course because of medical emergency, death in the family, military duty, or other extenuating circumstances. If a student does not complete the course in the specified period, the grade of I automatically converts to an F.

The period to convert an I in a graduate course extends through a time period determined by the instructor, but no later than the end of the first calendar month following the end of the semester in which the I grade was assigned. The Dean or CAO may waive/extend this period.

Repeating a Course

Students may petition the graduate coordinator of their degree program to repeat one course in which less than a grade of B was earned for the purpose of improving their grade point average. Both grades earned appear on the transcript, but only the replacement grade is included in the calculation of the grade point average. This applies to thesis credit as well. For purposes

of repeating a course, all credits for GRP or thesis will be considered as one course.

Undergraduate Enrollment in Graduate Courses

During their senior year, Embry-Riddle undergraduate students may take selected Embry-Riddle graduate courses, normally 500-level, for credit toward their undergraduate or graduate degree. Students must be within 10 hours of completion of the undergraduate degree, have the approval of the program coordinator of the appropriate graduate program, and have at least a 2.50 CGPA to qualify for enrollment in graduate courses while an undergraduate.

Academic Warning and Dismissal

Warning

Students whose cumulative grade point average (CGPA) falls below 3.00 are placed on Academic Warning. Students on Academic Warning must raise their cumulative grade point average to 3.00 in the next 12 hours of graduate work.

Dismissal

Students will be dismissed from their graduate program whenever any of the following conditions occur:

1. Students on conditional status who fail to satisfy the conditions of their admission;
2. A final grade of less than B is received in any three graduate courses.
3. A final grade of F has been received for any two graduate courses.
4. A final grade of F is received in any course worth 6 credit hours or more.

Graduate Academic Regulations and Procedures

5. The cumulative grade point average has not been raised to at least 3.00 within the first twelve graduate hours attempted after the semester/term in which the student is placed on academic warning.
6. Earn less than a 2.50 cumulative grade point average.

Students may appeal their first academic dismissal from the University by submitting a petition in writing detailing the existence of any exceptional mitigating circumstances to the Chief Academic Officer or designee within 30 days of the receipt of the dismissal notice. The CAO or designee will refer the petition to the appropriate appeals committee for recommendation. Upon recommendation of the appeals committee, the CAO or designee reviews the case and makes the final determination of the action to be taken. Such action will be taken in a timely manner not to exceed 30 days of the receipt of the petition. If confirmed, academic dismissal is entered on the student's permanent record and is final.

Students may only appeal a dismissal one time.

Dismissal for Cause

The University reserves the right to dismiss a student at any time and without further reason, if the student exhibits the following undesirable conduct:

1. Actions that pose a risk to the health, safety, or property of members of the University community, including, but not limited to, other students, faculty, staff, administrative officers, or the student himself/herself;
2. Conduct that disrupts the educational process of the University;

3. Any other just cause as determined by the University.

Transfer Between Graduate Degree Programs

A graduate student who wishes to transfer from one program to another must prepare a written petition before the transfer will be considered. Requests for transfer of credits from Embry-Riddle or other institutions and/or advanced standing credits should be included in this petition.

The department responsible for the new program, however, has the prerogative to accept or reject the student's request and to determine the courses applicable to the new program. Students should contact the appropriate graduate program coordinator.

When a student elects to transfer from one degree program to another, the catalog in effect when the transfer is approved is applicable.

Additional Graduate Degrees

A graduate student is allowed to apply up to 12 applicable credit hours from one graduate degree program to meet the requirements of another graduate degree program. In order to be awarded a second graduate degree, the student must satisfy all the requirements of the degree sought.

Catalog Applicability

The catalog in effect at the time of the student's initial matriculation remains applicable as long as the student remains in the original degree program. If a student does not maintain continuous enrollment at the University, the student must apply for readmission. The provisions of the catalog

in effect at the time of readmission then become applicable.

Students who change from one graduate degree program to another come under the provisions of the catalog in effect on the date the change of program petition was approved.

Curricular requirements stated in the applicable catalog will not be affected by subsequently published addenda or by later catalogs unless the student elects to change catalogs with the approval of their department chair.

Time Limitation for Degree Completion

The student has seven years from the date of admission to the master's degree program to complete the degree. An Embry-Riddle course older than seven years at the time of graduation may not be used in the program of study for a master's degree. (Prerequisite courses are exempt from this requirement.) Transfer courses older than seven years, earned at other universities, may be accepted at the discretion of the appropriate program chair. Students who do not maintain continuous enrollment (missing enrollment at the University for a period of two years) must file for readmission to the University, although seven years is measured from when the student was first admitted to the program.

Loss of Graduate Status and Readmission

Under certain circumstances (other than graduation), a graduate student may lose graduate status and will no longer be considered a student at Embry-Riddle. This can occur when:

- A student voluntarily withdraws from the University.
- A student is dismissed from the University and the dismissal becomes final.
- A student fails to meet the requirement for continuous enrollment. This occurs when a student does not enroll in at least one semester in a two-year period.
- A student does not complete the degree requirements of a graduate program within seven years of starting the graduate program.

Students who fail to maintain continuous enrollment for any reason are required to apply for readmission under the catalog in effect at that time.

Withdrawal from the University

Students who leave the University for any reason should conduct an exit interview with their Department Chair or designee and officially process a withdrawal clearance through the Records Office. When a student withdraws from the University after the end of the scheduled withdrawal period, a WF grade will be assigned for all courses in which the student is enrolled unless an exception is granted by the college dean or designee for medical reasons or other extenuating circumstances.

Graduation Requirements

The following summary of graduation requirements is provided for all students. An Embry-Riddle master's degree will be conferred upon the successful completion of the general requirements of the University and the specific requirements of the degree sought.

Graduate Academic Regulations and Procedures

1. All courses, theses, GRPs, and other academic requirements must be successfully completed as appropriate for the applicable catalog.
2. Students pursuing a master's degree must earn a minimum cumulative grade point average (CGPA) of 3.00 for all work completed at the University.
3. The student is not on Academic Warning.
4. All debts and obligations to the University are satisfied.
5. The student is not under University investigation for misconduct or other disciplinary matters.
6. A student must be enrolled in the semester in which he/she graduates.
7. An application for graduation must be initiated by the student and received in the time limit specified by the Records Office.
8. Participation in graduation exercises will not be permitted, a diploma will not be awarded, nor a transcript annotated as complete, until all of the degree requirements have been satisfied.

Graduation Honors

Graduation honors recognize students who have completed a graduate degree program and who have excelled academically throughout their graduate careers. To be eligible, graduate students must have completed their degree program with an Embry-Riddle cumulative grade point average of 4.00 based on grades received in all courses that apply to specific degree requirements. The student's diploma and transcript will be annotated WITH DISTINCTION.

Transcript Requests

A signed request for an academic transcript, accompanied by a fee, must be submitted by the student to the Records Office. Transcripts will not be released to students who have failed to meet their financial obligations to the University. Students may request the delivery of an electronic transcript via the Scrip-Safe Transcripts on Demand website: <https://iwantmytranscript.com>.

Student Education and Assistance

Embry-Riddle promotes substance abuse awareness by sponsoring educational programs and distributing literature. The University is additionally committed to assisting students in the resolution of problems associated with substance abuse and encourages students to seek additional help through referrals from University Health Services and Counseling offices.

Medical Marijuana

Arizona voters recently approved the Arizona Medical Marijuana Act (Proposition 203), which, under certain circumstances, authorizes the possession and use of marijuana for medical purposes by people with debilitating medical conditions who obtain a written certification from a physician. Notwithstanding the passage of Proposition 203, because of the university's obligations under federal law, marijuana, including medical marijuana, will continue to be banned on campus. Additionally, campus health care providers, in accordance with federal law as well as university policies and regulations, will not prescribe medical marijuana.

Privacy of Student Records

The University respects the rights and privacy of students in accordance with the Family Educational Rights and Privacy Act (FERPA). The University may disclose certain items of directory information without the consent of the student, unless the student submits a written non-disclosure request. Students are required to file requests for non-disclosure with the Records Office. Non-disclosure forms remain in place permanently, unless the office is notified otherwise.

Directory information consists of: student name; permanent or local mailing addresses and telephone numbers*; ERAU e-mail or box address; non-ERAU email addresses or account information*; date of birth*; major courses of study and areas of specialization; dates admitted, attended, and graduated; enrollment and class status; campus, school or college attended; degrees sought or earned and dates received or anticipated; awards, honors, and special programs or recognitions; most recent previous school attended; for student athletes and scholarship recipients the ERAU ID and photograph; factual disciplinary history, including results of pending disciplinary processes at time of withdrawal*; information from public sources.*

*These Directory information items may be released without student consent, but only for compelling reasons and only with advanced approval of the Registrar.

The University shall obtain written consent from students before disclosing any personally identifiable information from their education records with the exception of the directory information. The receipt of a written request to release an education record via FAX satisfies this requirement. Such written consent must:

1. Specify the records to be released.
2. Specify the purpose of the disclosure.
3. Identify the party or class of parties to whom disclosure may be made and their address.
4. Be signed and dated by the student or former student.

The law authorizes students and former students the right to inspect and review information contained in their education records. The student must submit a written request to the Records Office. The Records Office must make the records available for inspection and review within 45 days from the request. FERPA allows disclosure of educational records or components thereof under certain conditions. Students desiring additional information regarding FERPA may contact the Records Office.

Student Grievance Procedure

It is the policy of Embry-Riddle to administer its educational programs in a fair, equitable, academically sound manner and in accordance with the appropriate regulations and criteria of its governing board, accrediting associations, and federal and state laws and regulations. To this end, students are provided an opportunity to express any complaint, grievance, or dispute that upon investigation may be remedied.

Students are first encouraged to address their grievance, whether personal or academic, directly with the appropriate faculty/staff member with responsibility concerning the issue. This is considered an “informal” process and is meant to empower the student to confront the source of their concern, as well as minimize the length of time involved in achieving a resolution. If no

Graduate Academic Regulations and Procedures

agreement is reached, students may choose to put their grievance in writing directly to the next appropriate department head or director with responsibility for the area of concern. Students may seek assistance from the Dean of Students office to file and process a formal written grievance. Any student, at any time, may choose to file a formal written grievance with the Dean of Students office. The Dean of Students office will provide advice and guidance to students who present grievances or complaints, whether personal or academically related. Appeals concerning previously assigned grades are specifically addressed through the academic administrative chain, beginning with the course instructor (See Grade Appeal Process).

Formal Process

University committees/boards, which include student members, are available to process formal appeals when the informal mechanisms have been exhausted.

Academic Issues / Student Status

The Academic and Admissions Standards Committee is an appeal board designated to resolve any conflict with Academic Procedures or Policies. This committee makes recommendations to the Academic Deans. Additional information regarding the Academic and Admission Standards Committee, including how to initiate the process, may be obtained at the Records Office.

Grade Appeal Process

Students are first encouraged to informally address their issues of concern regarding grades with the course instructor. If a resolu-

tion cannot be reached, students may initiate the formal procedure by submitting a Final Course Grade Challenge form to the Chair of the department responsible for the course outlining the reasons in detail. The student is encouraged to discuss the grade challenge with the department chair for a solution at this level. The student may obtain the Final Course Grade Challenge form and instructions from the Records Office or the Department Chair.

Reference: Prescott Academic and Administrative Policies 2-3

Student Rights/Disciplinary Appeals

The Student Affairs Student Conduct Board may be convened to consider cases of alleged misconduct in which a student appeals the charges of misconduct brought against him/her. See Student Conduct in the Student Life section of this catalog for more information.

If the student complaint cannot be resolved after exhausting the institution's grievance procedure, the student may file a complaint with the Arizona State Board for Private Postsecondary Education.

The student must contact the State Board for further details.

FINANCIAL INFORMATION

Student Accounts

At the time of acceptance for admission, a University account is opened for each student. This account remains open until graduation. The primary use of this account is for University charges and payments. If an account shows credit balances, a student may request a refund in the form of a check or a transfer to an Eagle Card Account. A student may also complete an authorization and have these funds directly deposited to a checking account. Each student is encouraged to open and maintain an account at a local bank for personal matters.

Payment Procedures

Students may view all account activity online, including balance due, using ERNIE's Student Services tab to navigate to their Campus Solutions Student Service Center and clicking on 'View your Student Account'. Cash, Visa, MasterCard, Discover, American Express, and personal checks are acceptable forms of payment. Payments made by mail should be addressed to the campus Cashier's Office, 3700 Willow Creek Rd., Prescott AZ 86301, and timed to arrive prior to the 10 day payment deadline. Payments can also be made using the Student Center in Campus Solutions. Tuition charges incurred after the payment deadline are due immediately. Miscellaneous charges incurred subsequent to registration are due 30 days from the date of invoice or the last day of classes, whichever occurs first. All payments should include the student's name and identification number.

Payment Plans and Deferments

Payment plans are available each semester for all charges, excluding flight costs.

You may enroll in a payment plan for each semester that you are registered. Plans are available online, 30 days prior to the start of each semester and must be on file by the payment due date. An enrollment fee is added to your first payment.

Anticipated Financial Aid will place a deferment on your account for the amount awarded.

Any student whose tuition and fees are paid by a third party, (Foreign Embassy, U.S. Government, Trust Account, sponsor etc.) is considered a Sponsored student. Formal arrangements for sponsor payments should be made with the Cashier's office. Veteran's Education benefits are obtained by contacting the Veteran's Affairs Office.

Books and Supplies

Purchases are made directly from the University Bookstore. Cash, checks, Eagle Dollars, Visa, MasterCard, American Express, and Discover are accepted. Students whose anticipated financial aid is higher than the total amount for tuition and fees may request that these funds be transferred to their Eagle Card by the Cashier's Office for book purchases.

Delinquent Accounts

When a student's account is delinquent, registration for that term is subject to cancellation and registration for any subsequent semester will be denied. Delinquency will result in administrative withdrawal from the University. Administrative withdrawal will not relieve a student of the obligation to pay outstanding debts. A delinquent student account will result in suspension of all academic processing and information on

Financial Information

class performance, grades, and transcripts will be withheld.

Sums remaining unpaid may be charged interest at the maximum rate allowed by law. The student is also subject to the costs of collection, including collection agency fees (33-50%) and reasonable attorney's fees for making such collection. Delinquent accounts may be reported to one or all three major credit bureaus.

Embry-Riddle Aeronautical University is a not-for-profit institution of higher learning. As such, student receivable accounts are considered to be educational loans offered for the sole purpose of financing an education and are not dischargeable in bankruptcy proceedings.

Financial Responsibility for Tuition, Fees and Other University Charges:

- **Electronic Communication Policy:** Students registering for classes or obtaining other goods and services provided through Embry-Riddle Aeronautical University are advised that the Cashier's Office provides all financial account information using online secured portals via Blackboard. Account Statements and other categories of financial information are available for viewing 24/7 by logging into ERNIE and going to the Student Services Tab. We also send you important notices via your ERAU email account. It is your responsibility to review your ERAU account status and email account twice weekly and make payment by the published due date.
- You will need to contact the Cashier's Office in writing if you choose not to have your accounts receivable charges paid with your financial aid disbursement. However, this may delay your disbursement.

- If you are receiving a loan, you are obligated to repay the amount of your loan in accordance with the terms outlined in your Promissory Note.
- It is your responsibility to either pay or make arrangements to satisfy all University debts, which may exceed your financial aid, on or before the tuition payment deadline.
- Pre-term tuition bills are sent to registered students 30 days prior to the due date of each semester.

Residential Campus Tuition and Fees

Fall 2012 / Spring 2013 Tuition

Students registering for coursework during the spring or fall term totaling 12-16 credit hours are billed according to a "block tuition" rate. Registration for coursework equaling 1-11 credit hours is charged on a per-credit-hour basis. Students whose undergraduate course loads during fall or spring semesters are greater than 16 hours are charged the semester rate plus a per-credit-hour charge for those credit hours over 16.

A student with more than 27 completed ERAU credit hours and a cumulative GPA of 3.00 or higher may register (with advisor written approval) for up to 18 credit hours in a fall or spring semester, with no increase in tuition for hours over the block. Registration for credit hours over 18 will be charged at the per credit hour rate. Registration for the additional credit hours above 16 must be completed at the Office of Records and Registration. The completed credit hours and cumulative GPA will continue to be calculated until the semester start date. A preregistered student's tuition

may be recalculated if there is a change in the cumulative GPA or number of completed credit hours. Summer tuition rates are determined solely by the number of credit hours per term. Each summer term is billed separately.

Detailed tuition rates are described in the 2012/2013 financial insert at: <http://www.erau.edu/er/costs.html>

Mandatory Fees

The following fees are mandatory where applicable. Please see the financial insert or <http://www.erau.edu/er/costs.html>.

- Student Government Association fee
- Health service fee
- International student service fee
- Insurance
- Technology fee

User Fees

Other fees apply for services that are not considered mandatory. Please see the financial insert or <http://www.erau.edu/er/costs.html>.

Student internship fees (based on the cost of one credit hour in a student's degree program) are charged for the semester of internship.

Hourly Flight Rates

Rates vary by type of aircraft or simulator. Please see the financial insert applicable to your campus for specific rates.

Payment for Flight Instruction

The University uses a "Pay-As-You-Go" system for all flight instruction, and payment is expected at the completion of each training activity. Following each activity, the

instructor and student validate the charges calculated by Embry-Riddle's Education & Training Administration (ETA) system by entering their PIN numbers (electronic signature) into the system. Students then pay for the activity online using one of a variety of methods including Credit/Debit Cards, Eagle Card Flight Account, Eagle Dollars, or their Student Account (requires a positive Student Account balance). Students may not check-in for any subsequent activities until outstanding balances are paid.

In order to ensure continuity of training, it is important to have adequate funds to start and complete each course. If finances become an issue during a course, students should contact their Flight Training Manager immediately.

Payment for Helicopter Instruction

The University uses an outside contractor to provide helicopter flight training. Payment is made "Pay-As-You-Go." Eagle Card Flight Dollars are the only accepted form of payment. Students are required to deposit adequate funds in order to start training.

Refund Policy

During the fall and spring terms, only those students who officially withdraw from all classes through the Records Office are eligible for a percentage refund of the charges indicated below. The effective date of the withdrawal, as determined by the Records Office, governs the refund computations. There will be no tuition refund for reductions of hours after the last day of add/drop.

During summer terms, refunds are calculated on a per course basis and withdrawal from all classes is not necessary

Financial Information

to obtain a refund. The effective date of withdrawal, as determined by the Records Office, governs the refund computations.

Students who are suspended for disciplinary reasons will not be eligible for a full or percentage refund. Please reference the Withdrawal/Refund Schedule.

The following are refundable according to the Withdrawal/Refund Schedule:

- Tuition
- Student Government Association fees
- International student service fee
- Health service fee
- Technology fee
- Housing fees (on a pro-rated basis - cancellation fee may apply)
- Meal plans (on a pro-rated basis)

Cancellation and Refund Policy:

Three-Day Cancellation

An applicant who provides written notice of cancellation within three days (excluding Saturday, Sunday, and federal or state holidays) of signing an enrollment agreement is entitled to a refund of all monies paid. No later than 30 days of receiving the notice of cancellation, the University shall provide the 100% refund.

Other Cancellations

An applicant requesting cancellation more than three days after signing an enrollment agreement and making an initial payment, but prior to entering the University, is entitled to a refund of all monies paid.

University Withdrawal/Refund Schedule

Fall/Spring Semesters

Period I	Class days 1-5	100%
Period II	Class days 6-10	80%
Period III	Class days 11-15	60%
Period V	Class days 16-20	40%
Period V	Class days 21-25	20%
Period VI	Class days 26 and after	0%

Summer A/B terms

Period I	Class days 1-3	100%
Period II	Class days 4-6	80%
Period III	Class days 7-9	60%
Period IV	Class days 10-12	40%
Period V	Class days 13-15	20%
Period VI	Class days 16 and after	0%

Requests for refunds due to circumstances clearly beyond the student's control, such as illness or required military service, must be in writing and must be accompanied by appropriate documentation, such as a physician's statement or military orders.

A request for refund must be submitted within 60 days of the date that the student completed a change of registration. Refund petition requests will normally be processed within 10 business days. Personal appeals for denied requests must contain additional documentation not previously submitted.

Department of Education Withdrawal/Refunds Policy

Students receiving federal financial aid who withdraw will be subject to the refund policies specified by the U.S. Department of Education. Refunds of federal aid for students who officially withdraw on or before the 60% point of the enrollment period will be determined by calculating and comparing the amounts due under the federal refund schedule and the University refund schedule.

Housing Contracts

Students who have housing contracts must contact the Department of Student Life to release their obligation. Any refunds will be determined at that time.

Financial Assistance

Embry-Riddle participates in a number of federal, state, and University-administered programs that help students and their families meet educational costs.

Embry-Riddle believes the primary responsibility for financing education lies with the student and the student's family. Therefore, the student should apply for financial aid early, save money, look for ways to reduce costs, and become aware of specific program requirements by reading all financial aid publications. Financial aid awards are meant to supplement what the student and family can contribute toward costs and rarely cover all educational expenses. All financial assistance will be limited to the student's individual remaining need or Embry-Riddle's established cost of attendance.

A complete description of financial assis-

tance programs is available online at <http://prescott.erau.edu/financial-aid/available-programs/index.html> under the Financial Aid section. Students who expect to need help in meeting their financial obligations are encouraged to seek such assistance through one or more of the programs available for this purpose.

Eligibility Requirements

To be considered eligible to apply for most financial programs, students must:

1. Be U.S. citizens or eligible noncitizens
2. Be enrolled or accepted for enrollment as at least a half-time student in a degree program
3. Be making satisfactory progress toward a degree
4. Be registered with Selective Service if required to do so
5. Establish financial need
6. Not be in default on a federal loan or owe a repayment on a federal grant received at any institution

The Application Process

After applying for admission to the University, students may complete the federal application (FAFSA) at www.fafsa.ed.gov. Each year, students are required to reapply for financial aid. Students will receive a federal PIN from the Department of Education to renew their aid application. All students are encouraged to complete the FAFSA by Embry-Riddle's priority deadline of March 1.

Programs Available

The major categories of financial assistance

Financial Information

programs include grants, scholarships, loans, and student employment. Grants and scholarships do not have to be repaid, nor does the income earned through student employment. Loans from state and federal government sources or from private lenders must be repaid. Most of these programs are based on the student's financial need.

Grants

Federal (Undergraduate Only)

- Federal Pell Grant
- Federal Supplemental Educational Opportunity Grant

State (Undergraduate Only)

- Arizona residents are encouraged to visit the Arizona Commission for Postsecondary Education website for current information on Arizona State Grants: www.azhighered.gov

Loans

Federal

- Federal Direct Stafford Loan (Undergraduate and Graduate)
- Federal Direct Parent Loan for Undergraduate Students (PLUS)
- Federal Perkins Loan (Undergraduate only)
- Federal Direct GRAD PLUS (Graduate only)

Private

- Other private-sector educational loans

Employment

Federal

- Federal Work-Study Program

Embry-Riddle

- Embry-Riddle Student Employment
- Off-Campus Referral Program
- Resident Advisor Program

Scholarships

Embry-Riddle

A limited number of academic scholarships are awarded to entering freshmen and college transfers who possess outstanding academic credentials. An incoming student's completed application for admission to the University is the only application required for scholarship awarding consideration. For more information about scholarships, students should contact the campus Financial Aid Office.

Other Financial Assistance Programs

Reserve Officer Training Corps

The following campus-based organizations provide tuition scholarships to students who meet specific academic, medical, and physical requirements. In addition, Embry-Riddle offers financial assurances to new high school ROTC Scholarship winners. For more information on all requirements and benefits, refer to the Special Academic Programs and Opportunities section of the catalog.

- Air Force Reserve Officer Training Corps (ROTC)
- Army Reserve Officer Training Corps (ROTC)
- U.S. Marine Corps Platoon Leaders Class Program

Veterans Education Benefits

Most Embry-Riddle degree programs are approved by the U.S. Department of Veterans Affairs for enrollment of persons eligible to receive education benefits.

Students must be pursuing a degree in a specific program to be eligible to receive benefits. Admission procedures for veterans and other eligible persons are the same as those for other students.

Students are responsible for notifying the certifying official of any change in their enrollment or change in personal information affecting their eligibility. Students also must remain in compliance with University and Department of Veterans Affairs requirements. Students may receive education benefits only for courses that are required for their designated degree program.

For further information concerning approved programs and the application process, eligible persons should contact the Veterans Certifying Official. Students can also visit the U.S. Department of Veterans Affairs website at www.gibill.va.gov for more information.

Extended Payments

Students who use financial assistance to pay their University charges may have the payment date extended for the amount of their award if their funds are not ready to be disbursed by the date payment is due. This is called a payment extension. Any difference between the total charges and the amount of the extension granted must be paid according to the University's payment procedure.

To qualify for a payment extension, students must have applied for financial assistance and must have received final approval of their award.

Student Government Association Leadership Program

The Student Government Association (SGA) at each residential campus offers partial tuition waivers for elected officials of the organization. The amount of the waiver varies depending on the position held. The goal is to stimulate interest in holding elected office and to recognize the commitment student leaders make in such positions.

For information about the criteria students must meet to run in an SGA election, or for other information about the program, contact the Student Government Association office.

Athletic Grants

The University offers a limited number of Athletic Grants for qualified students. Awards are available for men's and women's golf, soccer, wrestling, and women's volleyball. The maximum value permitted by the NAIA is the actual cost of tuition, room, board, books, and fees. However, most grants are awarded as partial tuition waivers. To qualify, students must meet both University and NAIA eligibility requirements. The grants are highly competitive, and interested students should contact the campus Athletic Department for specific details.

Graduate Assistantships

Graduate assistantships are academic appointments that are normally reserved for qualified graduate students. A graduate teaching assistant helps in teaching undergraduate students in specified courses or laboratories under the general supervision of a faculty member. A graduate research assistant is involved in research activities

Financial Information

under the direction of a faculty member or a research associate. A graduate administrative assistant assists departments or faculty with curriculum development, special projects, and other duties as assigned. To be eligible for a graduate assistantship, a student must have full graduate status in a degree program, must have maintained a CGPA of 3.00 out of a possible 4.00 or above through the end of the semester (graduate or undergraduate) preceding the appointment, and must demonstrate adequate communication and technical skills.

The graduate program department has the responsibility to post the availability of its graduate assistantships.

Students should contact departments directly about the availability of assistantships.

Full graduate assistantships carry a stipend set by the University and a

tuition waiver for up to nine graduate credits per semester. Graduate assistants with such appointments are expected to devote 20 hours each week to effectively carry out their assignments. Under some circumstances, partial assistantships providing either tuition or a stipend may be granted. In such cases, expected time to be devoted is set by the assigning department. Graduate assistants are permitted to accept other University employment; however, University policies limit all students to a total of 25 hours of work per week, including the graduate assistantship. All graduate teaching, research, and administrative assistantships, both full and partial, require that the recipient be registered for at least three graduate credits at Embry-Riddle for any semester of their appointment. Summer registration is not required, but encouraged.

STUDENT LIFE AND SERVICES

Department of Student Life

The Department of Student Life (located in building 73, tel. 928-777-3744) is responsible for providing a safe and welcoming environment for all students. In addition to residential housing responsibilities, DSL provides various activities for all students including educational programs, entertainment and off campus trips, student clubs and organizations as well as managing operations for the J. R. Hunt Student Union. (Building 16, tel. 928-777-3781). DSL offers all students an opportunity for engagement, leadership, connection and personal development. DSL works with more than ninety (90) student clubs/organizations to provide resources and leadership opportunities for all.

Student Activities on Campus

Student Activities are administered through the Department of Student Life. The mission of the DSL, Student Activities Office is to provide students with the opportunity to experience co-curricular programs that support and complement the educational process and contribute to a well-rounded education. Student Life works with other departments on the campus to offer cultural, intellectual, recreational, and entertainment events for all Embry-Riddle students.

Student Activities provides support for recognized student clubs/organizations in addition to assisting students in starting new organizations. The Prescott Campus offers a wide variety of student organizations, including: sports clubs, special interest

Student Life and Services

groups, Fraternity and Sorority Life, honor societies, aviation clubs, military organizations, and religious clubs. Involvement in any student organization develops social responsibility, strong group dynamics, leadership, communication, management, budgeting, and decision-making skills. Students have the opportunity to learn about all of the organizations at the fall and spring Student Organizations Fairs.

The DSL, Student Activities, located in the Hunt Student Union, is the point of contact for Student Activities, leadership development, student organizations, Fraternity and Sorority Life, Carpe Noctem activities and events/activities held in the Student Union.

Carpe Noctem - Hunt Student Union
Bldg 16 (928) 777-6931

Latin for "Seize the Night", Carpe Noctem is a late-night activity series, sponsored by The Department of Student Life, Student Activities, that offers events occurring after 9 p.m. and which is open to all Embry-Riddle Students. Some of the events are free and some require a fee paid in Eagle Dollars to attend. Although every semester is different, the series includes activities such as: Midnight Laser Tag, Haunted House Visits, late night bonfires, and late night openings of the Hunt Student Union. Carpe Noctem activities are posted to the University Events calendar and are advertised through both email and flyers around campus. For questions or to suggest program ideas please contact the Coordinator of Student Activities in the Hunt Student Union.

Passport to ERAU Hunt Student Union
Bldg 16 (928)-777-6931

Sponsored by The Department of Student Life for traditionally-aged fresh-

man, Passport to ERAU is a program designed to aid with the transition to college life and to familiarize students with the resources available on campus, as well as to provide extracurricular learning experiences. The program only runs during the fall semester, and only those students who have matriculated into the university during the current semester are eligible to participate. Students receive their Passports during orientation and have the opportunity to attend specific events and complete tasks to earn "stamps" in their passports. Prior to Thanksgiving break, the passport is returned to the Department of Student Life and based on how many "stamps" were received, students can earn prizes.

Students Under Age 18

A student under the age of 18 is required to have a signature from a parent or guardian to participate in certain campus events such as field trips, recreational activities, and sporting events. Attempting to obtain a signature for each would be burdensome for both the student and the parent or guardian, possibly causing the student to miss activities normally associated with college life.

A waiver form may be signed one time by the parent or guardian and the student giving consent for the student to sign in place of the parent or guardian for all activities and events that require written consent. Waiver forms are available in the Dean of Students Office and will be mailed to each underage student prior to their scheduled arrival. The waiver expires the day the student reaches the age of 18.

Intramural and Recreational Sports

Intramural and Recreational Sports strive to create an atmosphere of competition and fun by offering a wide variety of activities ranging from team sports such as flashball (flag football variation), volleyball, basketball, dodgeball, soccer, and softball to individual competition in such sports as table tennis, racquetball, tennis, and disk golf. Other sports are also available on request.

The director assists individual students, chartered clubs and organizations with the use of sports facilities and equipment. Students are encouraged to use all on-campus sports-related facilities (outdoor swimming pool, tennis and basketball courts, playing fields, indoor racquetball, gymnasium, and fitness center). Hours of operation vary for each facility and are posted at the respective facility.

Whether students seek a highly competitive league to demonstrate their athletic skills or select a less competitive venue that encourages group participation for fun and to stay in shape and reduce the stress in their lives, they are sure to find what they are looking for in intramural recreational sports.

In addition to on-campus recreational activities, the Prescott area offers a virtually unlimited variety of outdoor recreational opportunities. Hiking, camping, fishing, sailing, and skiing are a few of the activities available in the surrounding area.

Intercollegiate Athletics

Embry-Riddle Intercollegiate Athletics brings exciting and highly competitive varsity sports to the Prescott Campus. All Embry-Riddle students are admitted to reg-

ular-season home events free of charge, and everyone is encouraged to get involved and support the Eagles. The Prescott Campus is a member of the California Pacific Conference within the National Association of Intercollegiate Athletics (NAIA) and successfully competes against opponents from all divisional levels of college athletics. The collegiate men's and women's soccer team have qualified for post season play once again in 2011. This is the fourth consecutive year the women have qualified and the third year in a row the men have qualified for post-season tournaments. The wrestling team continues to be a force in the collegiate rankings with 3 All-Americans in 2011. Our student-athletes continue to excel in the class room as well with 22 Academic All-Americans since 2010. In addition, The National Soccer Coaches Association of America recognized the ERAU-Prescott Men's and Women's Soccer teams for the Team Award for the Academic Year 2009-2010 outstanding team grade point averages: 3.64 Women's Soccer team and 3.31 Men's Soccer team.

The University sponsors six intercollegiate sport programs at the Prescott Campus: men's wrestling, women's and men's soccer, women's volleyball and men's and women's golf. Any student who meets both University and NAIA eligibility requirements is able to compete for a position on a varsity team. Athletic grants-in-aid, in varying amounts, are generally awarded to recruited varsity student-athletes, with walk-on players earning the right to compete for scholarship assistance, when available. For tryout information, contact the Intercollegiate Athletics Department, located in building 80, adjacent to the Eagle Gym.

Student Life and Services

For more information on Eagle Intercollegiate Athletics, including game schedules, rosters, results, and statistics, log on to <http://www.embryriddlesports.com>.

Student Government Association (SGA)

The Student Government Association Student Council (SGA) is elected each spring semester by the student body and is responsible for providing a communication link between the students and the faculty, staff, and administration. While representing the student body and serving as the voice of the students, the SGA also provides many services and is actively involved with student activities. SGA services to the students include, but are not limited to: free beverage service, free taxi rides to students when they are in unsafe situations through the Safe Ride program, a student directory, discount cards for local businesses, legal assistance, lockers, free faxing in the Copy Center and free printing in the Student Union. SGA members are actively involved in many of the committees on campus and the president of the SGA serves as a student delegate to the Embry-Riddle Board of Trustees. For questions, comments, or concerns, contact the SGA. Our office is located in the Student Union, e-mail is prsga@erau.edu or call (928) 777-3784.

First Year Programs

Dedicated to helping students achieve their academic goals, the First Year Programs team consists of highly qualified academic advisors, student assistants, peer mentors, and tutors who work together with faculty and staff campus-wide to assist students in their transition to University life.

Each college has faculty advisors and an

embedded academic advisor. The embedded Academic Advisors conduct new student registration, and both the faculty advisors and embedded Academic Advisors facilitate academic planning and scheduling, assist students in overcoming academic hurdles, and help students comply with academic requirements. Additionally, all advisors serve as role models and mentors, working to build strong relationships with students, and assist students with educational, career, and life decisions.

A Career Services program manager is available in each college to assist students in searching for intern or cooperative education opportunities and in finding a position in industry upon graduation.

Each of the colleges provides a first-semester class designed to transition first-time students into the University and their chosen degree program. In addition, academic assistance (tutoring) is available for all students who wish to participate.

Christine and Steven F. Udvar-Hazy Library and Learning Center

The mission of the Hazy Library and Learning Center is to promote academic success and enrich the learning experience for ERAU students, faculty and staff on the Prescott, Arizona campus.

The library opened as a campus landmark building in spring 2008. This strikingly designed, 21st century facility of 35,700 square feet incorporates emerging technologies and expanded knowledge access throughout the building for both individual use and collaborative student projects. Students use a variety of research and study accommodations including the presentation room and collaboration rooms, which

are equipped with multimedia presentation equipment, group study rooms, the research instruction room, and the Worthington reading room. The Computer Commons provides 40 computer work stations with several providing specialized engineering design and math software programs. Wireless connectivity is available throughout the building. Soft seating and open tables with mountain vistas create comfortable environments in which to study. The Multimedia Technology Center provides digital imaging and presentation development software and high-end computers for student projects and assignments requiring audio and video content. Laptop computers are available at the Media Technology Center for students to checkout for use in the library.

The library's Web site (<http://library.pr.erau.edu>) serves as a gateway to the library catalog, scholarly databases, and thousands of electronic journals and books. The collection is comprised of books, DVDs, technical reports, and current periodical subscriptions and newspapers. The Library also participates in local, state, and national network consortia that allow students access to unlimited information. Professional librarians and expert staff promote academic success by assisting students in locating and evaluating a wide range of information resources. The library research instruction program provides an introduction to research methodologies and to the resources available in an academic discipline, including specialized subject databases.

The Hazy facility is also home to the Department of Educational Technology, which encompasses the Center for Teaching and Learning Excellence (CTLE) and the Instructional Design Center (IDC). The CTLE facilitates the advancement of the

educational experience through support, leadership and promotion of innovative learner-centered instructional strategies and emerging educational theories, research, and learning technologies. The IDC provides assistance in the design, development, and assessment of engaging online and hybrid courses.

The Undergraduate Research Institute, also located in the Hazy building, connects students with faculty mentors and co-curricular learning opportunities and provides education and support for research activities in all academic disciplines – especially faculty-student collaborations.

The Hazy Library and Learning Center, Building 43, is open seven days a week, for a total of 102 hours throughout the Fall and Spring semesters, with extended hours during final examinations. For more information, visit <http://library.pr.erau.edu> or phone 928-777-3811 for library hours, or 928-777-3761 for research assistance.

Aviation Safety and Security Archives

The Aviation Safety and Security Archives, located in RASC2 (Building 22), is a repository of research materials donated by leaders in the aviation safety industry. The archives' holdings include accident investigation files, records of safety organizations, photographs, books, reports, and subject reference files. ASASA's web site, <http://archives.pr.erau.edu> provides information about the collections as well as access to selected items online through the Digital Library.

Information Technology Services

Information Technology strives to provide

Student Life and Services

students with stable, secure, highly available, always-on systems via the Web. The Embry-Riddle Web portal, known as ERNIE (Embry-Riddle Network for Information Exchange), can be found at <http://ernie.erau.edu>. ERNIE accounts are provided to all students. ERNIE gives students one-stop-shopping for class and University information as well as details on campus events. This is where you will find the Campus Solutions Student Services Center for access to various services, such as enrollment, unofficial transcripts, class grades, class schedules, and account balances. Information Technology also provides the following services:

- Computerized labs and classrooms
- Email accounts
- Network storage space for class assignments
- Assistance in connecting to the Residential Network (ResNet) for on-campus housing
- Wireless Internet access in many buildings and Residence Halls
- Access to a variety of academic software titles.

Student Employment

The Student Employment Office provides assistance to students seeking part-time on-campus employment and guidance to finding part-time or full-time off-campus employment in the Prescott and Quad-city areas. On-campus employment is available to all students regardless of financial need. Working on or off campus gives students an income, self-confidence, valuable employment and credit references, and a sense of accomplishment. They acquire useful skills

in time management, financial planning, and professional decorum.

Students are the life blood of Embry-Riddle and student workers are a vital part of the day-to-day operations of the campus. Student workers interact closely with other students, faculty, and staff. Because students work and serve each other at Embry-Riddle, a sense of community is created. Whether undergraduate or graduate students, the campus and community is fortunate to have dedicated Embry-Riddle students as part of their work force, and Embry-Riddle students benefit greatly from being a valued part of the work force.

Embry-Riddle adheres to the principle of equal employment opportunities for all students.

The Student Employment office is located in Human Resources in Building 42, the Visitor's Center.

Career Services

Career Services encourages students to contact them early in their education to explore career options and to develop a successful internship, full-time professional position, or graduate school search strategy.

We are dedicated to bringing together potential employers and talented professionals to meet their co-op/internship education and full-time needs. Career Services provides our students and alumni with the best job search tools and techniques available in order for them to excel in today's highly competitive job market. This includes providing valuable expertise and resources in the areas of one-on-one career advisement; resume writing and critique services; job search and application links and techniques; interview tips and practice interviews; and The EagleHire Network, a

web-based resume referral system, to view postings of regular full-time positions and internship opportunities, which also allows employers to search for candidates.

Industry/Career Expos are held in the fall, where companies visit the Prescott campus to recruit students for full-time, cooperative education, and internship opportunities and to provide information on the industry. Virtual Hiring Events are held in spring, which provide a special showcase of employers' opportunities. On-campus company visits, interviews and informational presentations are also scheduled year-round.

Safety and Security

The Department of Safety and Security at Embry-Riddle is comprised of a highly dedicated and professional staff. Our staff strives to provide the members of our campus community with a safe and orderly environment that preserves the well-being of the campus community, the University's physical assets, and supports the educational mission of the University. The Safety department is available 24 hours a day, seven days a week. We provide campus patrol, communications/dispatch, safe walk, parking and traffic services, Life Safety system and event management, and crime prevention to the campus community and particularly for our students. These services cover both the main campus and the University's flight line. The department also maintains a close liaison with local law enforcement agencies to aid in our goal of providing the safest possible learning environment. The Campus Safety and Security department is located in Building 14. Phone: (928) 777-3739

To review all Safety Department Policies see the Safety and Security page of the cam-

pus website at <http://www.erau.edu/pr/safety/index.html>

To see the Secure Environment Document, Missing Student Protocol and Active Shooter on Campus video go to: https://ernie.erau.edu/portal/page/portal/safety_services

Veteran's Affairs

The Coordinator for Veteran's Affairs provides assistance for student veterans by assisting with advising, obtaining VA benefits and credit for military training, and serving as an advocate for veteran issues throughout the campus community. The Coordinator, along with veteran student employees, has office hours in the Student Veterans Office, Building 18B. The Coordinator also serves as a liaison within the local community, coordinating support from such agencies as Veteran's Upward Bound and the Mobile Vet Center.

The Student Veteran's Organization (SVO) is a recognized club of registered veteran students. The SVO provides activities and programs to support the college experience of all veteran students. The SVO operates out of the Veteran's Office in 18B and can be reached by telephone at (928) 777-6733 or fax at (928) 777-6660.

The University provides counseling and mentoring services for our veteran students. In addition, educational programs to support veteran students in adapting to college life, tutoring to support academic excellence and social activities to build collegiality with staff, faculty, and other students are offered through the Veteran's Coordinator and the Student Veteran's Organization.

Specific information for veterans as it relates to Veteran's Administration benefits, the Post 9/11 GI Bill, Montgomery G.I. Bill,

Student Life and Services

Yellow Ribbon Program and University financial responsibilities are available in the Financial Aid Office, in Building 41.

Wellness Center

Maintaining good health promotes a productive University experience. The Wellness Center staff is committed to promoting student wellness through direct care, education, and assistance with lifestyle modification.

Services include physician/nurse assessment, prescriptive care, chiropractic care, massage therapy, referrals, wellness education, women's health care, medical grounding of flight students, and assistance with aerospace medical concerns. Disability Support Services, personal Counseling and Chapel services are also coordinated through the Wellness Center.

Students must satisfy the mandatory immunization requirement prior to enrollment. The Medical Report form supplied by University Admissions indicates the immunizations that students must document in order to register for courses and live in University-managed housing.

Prospective flight students should be aware that certain sensory impairments, medical, neurobiological, and psychological conditions, and prescriptive medications may delay or preclude medical certification by the FAA. These issues should be discussed with an aviation medical examiner (AME) to ensure participation in flight instruction. Students may also contact the Wellness Center clinical staff for information on eligibility for medical certification.

The Wellness Center is located in Haas Commons.

Medical Marijuana

Arizona voters approved the Arizona Medical Marijuana Act (Proposition 203), which, under certain circumstances, authorizes the possession and use of marijuana for medical purposes by people with debilitating medical conditions who obtain a written certification from a physician. Notwithstanding the passage of Proposition 203, because of the University's obligations under federal law, marijuana, including medical marijuana, will continue to be banned on campus. Additionally, campus health care providers, in accordance with federal law as well as University policies and regulations, will not prescribe medical marijuana.

Under Federal legislation entitled The Drug Free Workplace Act of 1988, and The Drug Free Schools and Communities Act of 1989, "no institution of higher education shall be eligible to receive funds or any other form of financial assistance under any federal program, including participation in any federally funded or guaranteed student loan program, unless it has adopted and has implemented a program to prevent the use of illicit drugs and abuse of alcohol by students and employees." Federal law entitled The Controlled Substances Act, prohibits the use, manufacture, distribution, dispensing, or possession of marijuana; it also classifies marijuana as a controlled substance and makes no exception for medical use. Proposition 203 does not change the fact that marijuana remains illegal under federal law; the University will therefore continue to enforce its current policies prohibiting the unlawful manufacture, distribution, dispensation, possession or use of a controlled substance, including medical marijuana, on its property or as part of any of its activities.

In summary, despite popular miscon-

ception, Proposition 203 only made possession and use of medical marijuana legal under Arizona law. It did not generally legalize marijuana possession and use. Marijuana remains a controlled substance under federal law and possession and use of marijuana remains illegal under federal law, regardless of whether a person has a prescription or is otherwise complying with Proposition 203. In order to remain eligible to receive federal grant funding and participate in federally funded student financial aid, the University must require that students, faculty, and staff do not unlawfully possess or use marijuana on campus or as part of any of its activities. As a result, the possession or use of marijuana on campus, even in accordance with the exceptions granted by Proposition 203, is a violation of federal law and the University's current policies and regulations. Employees and students who violate these policies will continue to be subject to disciplinary action.

Health Insurance Requirement for Students

All students must have health insurance and provide proof of coverage on an annual basis and insurance coverage must be continuous throughout enrollment at Embry-Riddle. The university recommends that students and/or their parents who are currently insured contact their plan administrator to ascertain benefits and limitations while enrolled.

All students will be automatically enrolled in the university's student health insurance plan with the premium assessed to their student account. Students with comparable private insurance may waive out of this plan and have the charge removed from their account. Prior to completing

the waiver request, we encourage students and/or their parents to review the university's basic student plan and major medical options at www.uhcsr.com. Failure to waive the insurance by the semester deadline will result in the non-refundable insurance fee remaining on your student account.

Embry-Riddle is not responsible for insurance waivers that are submitted after the deadlines. The waiver can be completed by logging into the ERNIE portal. Click on Campus Solutions, Main Menu, Campus Community, ERAU Health Services, Complete Health Insurance Data and Submit.

International students with an F1 or J1 visa must demonstrate proof of coverage that meets the State Department's requirements for international students. The International Student Representative will review each International Students policy and place the waiver code on their account if the policy meets the requirements.

Disability Support Services

The University is committed to ensuring access and providing reasonable accommodation for qualified students with documented disabilities. Services for Individuals with Disabilities are made available in accordance with Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act of 1990.

Disability Support Services (DSS) is staffed by the DSS coordinator who works with students, faculty, and other departments to meet the accommodation needs for students with documented disabilities.

Students' needs are addressed on an individual basis with regard to their specific disabilities, academic and career goals, learning styles, and objectives for personal

Student Life and Services

development. Campus-specific services may include assistance with planning academic schedules, registration assistance and advance registration, academic intervention programs, time management training, study skills assistance, arrangements for peer tutoring, testing modifications, advocacy, and facilitation of physical access. The University does not provide diagnostic testing but will make referrals for evaluation by area specialists. Costs associated with testing referrals are the responsibility of the individual student. Because certain academic programs are FAA-certified, those programs are subject to regulation by that agency. Therefore, regulatory limitations may delay or preclude participation or licensure in those programs by persons with certain disabilities. Prospective students with a documented disability who are considering a program of study are encouraged to contact the Disability Support Services Coordinator in the Wellness Center at least six weeks prior to arriving on campus in order for us to better assist you.

Contact (928) 777-6653 for DSS eligibility requirements and information.

Counseling Services

The college experience is often complex, offering students tremendous intellectual and personal opportunities, difficult challenges and demands. Many students seek counseling as a means to learn, grow, and enhance their personal and professional skills. College students are faced with many transitions such as moving away from home and ending and beginning relationships.

Individual counseling provides an opportunity for students to meet with a counselor to discuss and explore important aspects of their college experience.

Counseling sessions may include adjustment to college life, relationship problems, stress, and more serious personal concerns. Counseling is available without cost to students. Content and records of sessions are confidential.

The Counseling Services office is located in the Wellness Center in Haas Commons.

Campus Ministry

The University recognizes that students may feel challenged by the many questions, experiences, and world views encountered during their college experience. We also recognize that because students are faced with a consuming social life and the subtle influence of peers, it is important to encourage and promote spiritual development. Special opportunities for deepening faith such as meetings and programs sponsored by student religious clubs and pastoral counseling are offered during the regular academic year.

The Fred and Fay Haas Memorial Interfaith Chapel is the center where students, faculty, and staff can go to for their spiritual needs - be it meditation, quiet time and reflection, or for activities offered by religious clubs and churches. It is also a place where special events are scheduled during the religious calendar.

Contact (928) 777-6653 for Chapel inquiries and information.

Residence Life Program

Located in Haas Commons, the Department of Student Life provides campus housing for students. Embry-Riddle believes that the on-campus living experience is an integral and positive part of a well-rounded University education. Interaction with other students in

the campus community living environment is a major contributor to student success. National research shows that students who live on campus earn better grades, tend to be more involved in campus activities, and are more likely to graduate than students who live off campus. The campus housing system offers programs and services that support the academic mission of the University and promote student success. All residence halls are staffed by specially trained personnel who are committed to helping students and promoting a positive community environment.

Residential Facilities

Residence halls on the Prescott Campus are furnished and air-conditioned. Housing fees include all utilities, Internet (plug-in and wireless), and cable TV access. Although computer labs are conveniently located in academic buildings, students should provide their own personal computers for use in residential housing.

All residence halls have vending facilities and easy access to laundry facilities and campus dining areas. First-year students are assigned to areas specifically for first year students.

Upper-class students can live in a variety of campus residences, including suites and apartments, on a space-available basis. Accommodations for disabled students are available. Requests for these spaces should be made to the Disability Support Services located within the Wellness Center.

Housing Application Policies

Housing information is sent to students who have been accepted to the University. All housing applications and deposits are made on line by accessing the Student Tab

within ERNIE. Contracts must be submitted on line to the Department of Student Life, with a \$200 deposit no later than June 15 (December 15 for spring semester) for a guaranteed space in Embry-Riddle managed housing, not necessarily a specific location or room type. Embry-Riddle guarantees all students who are required to live on campus a space. Students who are not required to reside on campus will be housed on a first come, first serve basis, space permitting. Temporary assignments may be created in order to fulfill the all requests for housing.

New Students

Students released from their housing contract will be charged an \$800 administrative fee. Please refer to the housing contract for terms and conditions.

Current Students

Current students released from their housing contract after April 30 will be charged an \$800 administrative fee.

Housing Options

First-Year Freshman Housing

All first-year students under the age of 21 without permanent residency in Yavapai County, and with less than 28 earned credit hours, are required to live in University-managed housing for their first full academic year to include fall and spring. Any student required to reside in University-managed housing is required to have a 7 day access or 5 day access meal plan.

Mingus Mountain Complex (Halls 1-5):

- 3-bedroom apartment with a kitchenette shared by 6 people

Student Life and Services

Upper Class and Non-Traditional Student Housing

Mingus Mountain Complex (Hall 5):

- 3-bedroom apartment with a kitchenette shared by 6 people

Village Complex (Halls 6-10):

- 2-bedroom suite shared by 4 people
- 2-bedroom apartment shared by 4 people

Thumb Butte Complex (M100-M400):

- 1-bedroom suite shared by 2 people with a private bath

Dining Services

A variety of nutritious and satisfying dining services and meal plan options are offered. Dining facilities are conveniently located to residence halls and offer a wide range of food selections, from full hot meals to fast food and snacks. Students can also enjoy weekly specials and events such as cook-outs, buffets, and celebrations. Dining service hours are designed to meet the needs of students, with meals available throughout the day. Accommodations can be made for students with special dietary needs or medical conditions. Dining service personnel are available to consult with students on an individual basis. Requests for special services should be made to the director of Dining Services.

Meal Plans

Meal plan costs are listed on the Housing Contract and may be obtained by calling the Department of Student Life at (928) 777-3744.

All first-year students who are required to

live on campus must purchase the seven-day all-access or five-day Soaring Eagle all-access meal plan for each of their consecutive fall and spring semesters. The seven-day plan includes \$100 in Dining Dollars, while the Soaring Eagle plan includes \$200. Dining Dollars can be used to purchase individual items at any campus dining location. Other plan options are available for students not required to live in University-managed housing, with information available from the Department of Student Life.

Meal Plan Options for non-required students

- All You Can Eat (during the hours of cafeteria operation)
- 7-day All Access with \$100 in Dining Dollars
- 5-day Soaring Eagle All Access with \$200 in Dining Dollars
- 5-day All Access with \$50 in Dining Dollars

Block Plans for non-required students (number of meals for the semester)

- 175 Block Plan
- 125 Block Plan
- 75 Block Plan
- 50 Block Plan

Eagle Card

The Eagle Card is the official Embry-Riddle Aeronautical University identification card and should be readily available at all times to present to University officials who may request identity verification. The Eagle Card is the property of ERAU, which reserves the right to revoke use of the Eagle Card on any

of its accounts at any time. Only the individual to whom it is issued may use the Eagle Card. Other uses include:

- **Activity Card:** Your Eagle Card allows you access to student activities, events, games, voting, and other services provided by Embry-Riddle.
- **Access Card:** If you reside in on-campus University Housing, your Eagle Card will give you access to the residence halls. Also, certain labs and buildings require the use of an Eagle Card for entry.
- **Library:** You must present your Eagle Card each time you check out library materials.
- **Debit Card:** Your Eagle Card offers two debit accounts that are managed by the University. The Eagle Dollar account can be used at any University point of sale, including vending, copy, and laundry machines. The Flight account can only be accessed through ETA or at UHI.
- **Meal Plans:** These are accessed via your Eagle Card. (See the Dining Services section for more information on meal plans.)

Deposits

The Eagle Dollars and Flight Account minimum deposit is \$1.00. Deposits to either account can be made at the Cashier Office or via the Web at <https://erau.blackboard.com>. The University reserves the right to suspend any account if a negative balance goes unpaid for more than 30 days, or if a student account is delinquent.

Transactions

The cardholder must present their Eagle Card at the time of purchase. All sales transactions charged to an account through the

use of the Eagle Card are final at the point and time of sale. The cardholder is responsible for observing the amount charged during the transaction and monitoring balances. A cardholder can check their account balances online at <https://erau.blackboard.com>.

Statements

The cardholder may request a detailed statement of the Eagle Card transaction history and/or activity at the Eagle Card Office.

Account Closing and Refund

Your funds in an Eagle Card account are not transferable and there are no cash withdrawals permitted from the account(s). The funds will stay there semester-to-semester, year-to-year, and will not be refunded unless the cardholder withdraws, graduates, or is dismissed from the University, with proof required. Flight Account refunds can be requested upon flight course completion or withdrawal from the flight program. A request for a refund must be submitted to the Cashier's Office.

Lost or Stolen Card

The cardholder is required to immediately contact the Eagle Card Center in Building 13 during normal business hours (8 a.m. to 4 p.m.), the Safety Office after business hours, or via the Web at <https://erau.blackboard.com>, if an Eagle Card is lost or stolen. The cardholder is responsible for all transactions charged to their accounts prior to proper notification to the Eagle Card Center, the Safety Office, or via the Web. Once the card has been reported as lost or stolen, all accounts and privileges accessed with use of the Eagle Card will be deactivated.

Student Life and Services

Replacement of Lost/Stolen or Replacement Cards

A replacement fee of \$10.00 will be charged for lost cards. The fee will be waived if a card was reported as stolen and a report number was issued by Campus Safety. Temporary cards are available free of charge for up to seven days. A replacement fee of \$5.00 will be charged for damaged cards if the cardholder turns in the non-functioning card to the Eagle Card Office.

Error Resolution

If you feel there has been an error on your account, please notify the Eagle Card Office within 60 days from the date of the transaction in question. In order to resolve the problem we will require the following:

- Name and student ID number
- Description of the error or transaction in question
- Dollar amount of the transaction in question
- A clear explanation of why you believe there is an error.

Disclosure of Accounting Information to Third Parties

The University will disclose information to third parties about the account holder's account(s) or the transfer made only: (1) in order to comply with court orders or other applicable laws, or (2) if the account holder gives written or verbal permission, or (3) if the student's account receivables is in the third party's name. All policies and procedures are subject to change.

Mail

All new and continuing, registered students

are assigned a campus mailbox and are required to check it daily. All personal mail, UPS, Federal Express, deliveries, etc., should be addressed as follows:

If box number is known:

Student Name
Embry-Riddle Box # _____
3700 Willow Creek Road
Prescott, AZ 86301-3720

If box number is unknown:

Student Name
Embry-Riddle - New Student
3700 Willow Creek Road
Prescott, AZ 86301-3720

Center for International Programs and Services (CIPS)

The Center for International Programs and Services (CIPS) at Prescott, houses International Admissions, Study Abroad and the International Student Services. CIPS is the central point of contact for issues concerning international education at Embry-Riddle such as information regarding study abroad and exchange programs, as well as cultural programming. An international student orientation is held each semester to familiarize students with University and immigration policies as well as the education system in the United States. The office advises students on admission to the University and immigration regulations, in addition to financial and personal matters. CIPS also assists international students with processing forms and documentation of status required by foreign governments, sponsors, the U.S. government and the University.

CIPS staff members continually strive

to provide opportunities for all students to become involved on campus and in community programs that promote cross-cultural awareness with University faculty, staff, and students as well as the local community. Some activities include International Education Week, programs with local families to introduce students to the community, local speaking engagements, and trips to area attractions such as amusement parks, national parks, and cultural festivals.

To learn more about CIPS, contact (800) 888-6600 or (928) 777-3773 or visit our offices in Building 51.

Dean of Students Office

The Dean of Students Office offers services to assist students with difficulties they may encounter, including personal and family emergencies. The department oversees all non-academic student conduct and judicial issues as well as disciplinary records. Reporting to the Dean of Students are the Department of Student Life, (Residential Housing, Student Activities, Fraternity and Sorority Life, & Clubs and organizations), International Student Services, the Wellness Center (Health, Counseling, Campus Ministry, and Disability Support Services), / Safety Department and Veteran's Services.

The Dean of Students Office is located in building 18A.

Student Grievance Procedure

It is the policy of Embry-Riddle Aeronautical University to administer its educational programs in a fair, equitable, academically sound manner and in accordance with the appropriate regulations and criteria of its governing board, accrediting associations,

and federal and state laws and regulations. Students are provided an opportunity to express any complaint, grievance or dispute to be investigated for possible resolution.

The Dean of Students office will provide advice and guidance to students who present grievances or complaints, whether personal or academically related. Appeals concerning previously assigned grades are specifically addressed through the academic administrative chain, beginning with the course instructor (See Grade Appeal Process in Catalogue and Student Handbook). The Dean of Students office will provide general guidance on the Grade Appeal process and other academically related issues.

Students are first encouraged to address their grievance, whether personal or academic, directly with the appropriate faculty/staff member with responsibility concerning the issue. This is considered an "Informal" process and is meant to empower the student to confront the source of their concern, as well as minimize the length of time involved in achieving a resolution. If no agreement is reached, students may choose to put their grievance in writing directly to the next appropriate department head or director with responsibility for the area of concern. Students may seek assistance from the Dean of Students office to file and process a formal written grievance. Any student, at any time may choose to file a formal written grievance with the Dean of Students office.

Formal Process:

1. The Dean of Students or his/her designee will meet with the student to discuss options.
2. Students who wish to file a written

grievance or complaint will be requested to submit a report via electronic means, if possible. Students are encouraged to include details, specific information, and a complete description of the issue of contention.

3. The written complaint will be electronically filed in the Student Conduct Data Management System for record keeping purposes. A copy of the report will be forwarded with High Importance notation to the Department Chair, Director or College Dean as appropriate, along with a request for review and follow up.
4. Students will be encouraged to follow up with the Dean of Students office regarding the status of their grievance and/or to seek guidance regarding any phase of the process.
5. The Dean of Students office will keep a record of all correspondence regarding student grievance cases, up to and including resolution, for a minimum of three (3) years following final disposition.

In the event that a student wishes to file a grievance or complaint against another student, the ERAU Student Conduct Board and applicable judicial procedures may be applied (See Student Conduct Board Process – Student Handbook).

When it is appropriate, the Dean of Students office offers formal mediation services for dispute resolution. Mediation may take place in lieu of Student Conduct Board proceedings, but requires commitment on the part of both parties that the process and the outcome are formal and that both parties will accept the final decision.

Student Rights/Disciplinary Appeals

The Student Affairs Student Conduct Board may be convened to consider cases of alleged misconduct in which a student appeals the charges of misconduct brought against him/her. These are cases in which a student wants to request a review of Sanction Levels IV - VII imposed by a department or University personnel, or cases in which a student feels persons or agencies at the University have violated his/her rights. The Student Affairs Student Conduct Board is composed of faculty, staff and students. Students may elect to adjudicate an appeal through a University Administrator rather than the Student Affairs Student Conduct Board. The supervisor of the University Student Conduct officer that made the original decision may serve as the appeal administrator. Applications for hearing or appeal are available through the Dean of Students Office.

If the student complaint cannot be resolved after exhausting the institution's grievance procedure, the student may file a complaint with the Arizona State Board for Private Postsecondary Education. The student must contact the State Board for further details.

Arizona State Board for Private
Postsecondary Education

SPECIAL OPPORTUNITIES

English Language Program - ELS Language Centers

To help students fulfill the English proficiency requirement, Embry-Riddle in Prescott works as a cooperating school with ELS Language Centers, one of the premier providers of English language learning in the United States. If you meet all other admission criteria beside the TOEFL requirement, ERAU-Prescott can conditionally admit you while you study English with ELS Language Centers. Upon completion of Level 112 with ELS Language Centers, you can be fully admitted to begin your studies at ERAU-Prescott.

Please visit the ELS Language Centers website at www.els.edu for more information. For direct information about ERAU-Prescott's cooperating University arrangement with ELS Language Centers, and for a listing of the ELS Language Centers location nearest to our campus, please visit: <http://www.collegedirectory.els.edu>. For more information, contact International Admissions at the Prescott Campus at (928) 777-6600.

Embry-Riddle Honors Program

The Honors Program at Embry-Riddle is highly selective, offering students an enriched educational experience while also giving them opportunities to enhance campus and community life for others. Honors Program students enroll in several general education seminars focused on relevant, stimulating, interdisciplinary topics that encourage critical and creative thinking. Honors classes are small, the faculty is carefully selected, and the courses are student-centered and discussion-oriented. The

Honors experience in the major emphasizes close involvement with selected faculty, research opportunities, and individually tailored projects. The program also adds to campus life through its guest speaker series and through activities sponsored by its student organization. Graduates of the Honors Program are models of academic excellence and student leadership.

Some features of the Honors Program:

- Nine credit hours of Honors in general education; at least nine credit hours of Honors in the major. The Honors Program does not add credit hours to any major
- Honors faculty
- Guest speakers who spend time with students in Honors seminars
- Honors housing for freshman students
- Priority registration for classes
- Research opportunities
- Co-op and internship opportunities
- Summer study-abroad opportunities

Ronald E. McNair Scholars Program

Named in honor of the African-American mission specialist who died in the 1986 Challenger disaster, and funded by a U.S. Department of Education TRiO grant, this prestigious diversity program offers financial aid and academic and other support services to eligible upper-division students who are interested in pursuing graduate studies leading to a Ph.D. after leaving Embry-Riddle. To be eligible, a student must

Special Opportunities

represent a low-income, first generation, or underrepresented group such as certain ethnic minorities. In addition to some financial aid, the program provides academic mentoring, academic and career counseling, Graduate Record Examination (GRE) preparation, a 3 credit upper division course in research methodology and statistics, funded research opportunities, and cultural/social activities. Acceptance in the program is based on a special application process and is selective. Eligible transfer students are welcome to apply. For more information, students should contact the McNair Scholars Program office on campus.

International Programs

Embry-Riddle offers its students a wealth of opportunities to study abroad in more than 50 destinations spanning five continents worldwide. Summer Study Abroad programs, typically consisting of 6 credit hours taught over a five-week summer session, offer students the chance to learn language skills and the culture and history of the country they are studying in through Embry-Riddle classes taught overseas. A variety of semester-long and year-long exchange and study abroad programs are also available, including the opportunity to complete a dual degree (bachelor's and master's) with a European university.

Motivated students in good academic standing (participation requires a minimum GPA of 2.5 for summer programs and 3.0 for exchange and study abroad programs except under special circumstances) from the Prescott, Daytona Beach, and Worldwide campuses have the opportunity to take courses through our partner schools that will be directly applicable to their degree programs at Embry-Riddle while participat-

ing in numerous cultural activities abroad. Foreign language classes are often an essential part of ERAU programs, and students at all levels of language ability – from beginners to native speakers – are encouraged to take part. In fact, all Embry-Riddle summer Study Abroad programs are designed to accommodate students who have no prior foreign language experience. Embry-Riddle is affiliated with many universities offering specialized semester-long and year-long programs that are taught in English or other languages; appropriate language fluency will be required in non-English speaking programs. Qualified exchange program participants could also have the opportunity to be placed in paid internships with companies or research labs abroad. Students who qualify for financial aid are eligible to receive funding when enrolled in one of our international programs; there may also be additional scholarship and grant opportunities available to students who choose to study abroad.

Cooperative Education

Cooperative Education/Internship offers qualified students an opportunity to gain valuable experience, explore career options, develop contacts in the industry, and earn college credit. Requirements and benefits vary by degree program and by employer. Students should discuss their co-op/internship plans with their Career Services Director, and, when applicable, with the co-op/internship faculty advisor in their degree program. For undergraduates, one (1) upper-level open elective credit hour is awarded for every 100 clock hours of work completed, up to a maximum of six (6) credits in one semester. For graduate students, one (1) credit hour is awarded for each 200

clock hours of work completed, up to a maximum of three (3) credit hours for the semester. Additional information is available from Career Services and on the Career Services website (<http://prescott.erau.edu/csmpud-services/career/index.html>). A co-op/internship fee, based on the cost of one (1) credit hour in a student's degree program, is charged each semester.

Reserve Officer Training Corps

Reserve Officer Training Corps programs are subject to the control of the service branch that sponsors them and are operated according to the rules and regulations established by the service branch. These may be changed from time to time without notice or obligation.

Not all Reserve Officer Training Corps programs are available at all University campuses or locations. Students should contact the Admissions Office to determine program availability.

Air Force Reserve Officer Training Corps

The Air Force Reserve Officer Training Corps (Air Force ROTC) is a leadership and educational program designed to give men and women the opportunity to become Air Force officers while completing their college degrees. The Air Force ROTC program is focused on preparing cadets to become leaders in today's high-tech Air Force.

Air Force ROTC enrollment is not restricted to individuals who wish to commission as officers in the USAF. Students may elect to take Air Force ROTC courses for academic credit only, earning elective credits for all University degrees. Additionally, Prescott Campus students who complete all 16 hours of Air Force ROTC

coursework are eligible for a Defense Studies minor. For more information, refer to the Minor Courses section of the catalog.

Any qualified student may enroll in Air Force ROTC classes. Check with your local Air Force ROTC detachment for more information.

Four-Year Program

The first half of the four-year program is called the General Military Course, which is offered during a student's freshman and sophomore years. This program allows students to try out Air Force ROTC for up to two years without incurring any obligation (unless they are on an Air Force ROTC scholarship). As students attend class, they learn more about the Air Force and the historical development of airpower. The last two years are called the Professional Officer Course. These junior and senior level classes cover leadership skills, national security affairs, and preparation for active duty.

Three-Year Program

While Air Force ROTC is designed to be completed over four school years, it is possible for in-coming sophomores to enter the program with the intention of completing it in three. Under this program, a student will take both the freshman and sophomore classes in the first year and then continue with the junior and senior years on the same track as his or her 4-year counterparts. Not until the start of the junior year does a student incur an obligation to join the Air Force, unless the student accepts an Air Force scholarship sooner. Candidates for the three-year program must be approved in advance by the detachment commander.

Finances

Textbooks for all Air Force ROTC courses

Special Opportunities

are free. Students who have contracted with Air Force ROTC receive a tax-free subsistence allowance during the academic year of \$300-\$500 per month, depending on their academic year.

Air Force ROTC Scholarships

Air Force ROTC offers scholarships for qualified students on a competitive basis, covering a student's college education for two, three, or four years. Each scholarship pays up to full tuition, laboratory fees, incidental fees, an annual book allowance of \$900, and a tax-free subsistence allowance of \$300-\$500 per month (see Financial Information). High school students interested in a scholarship should apply as soon as possible in the six-month application period (mid-May to December 1 of their senior year). Application forms for the scholarship are available online at <http://www.afrotc.com>.

In-college scholarship opportunities are also available for students already enrolled in the Air Force ROTC program. Freshmen can earn three-year scholarships, while sophomores can earn two-year scholarships. College transferees may also be eligible for these scholarships.

All scholarship applicants must meet the following minimum requirements:

- Be a U.S. citizen
- Must commission prior to age 30 (up to 35 with waiver)
- Meet military and physical standards
- Pass the Air Force Officer Qualifying Test
- Have a minimum cumulative GPA of 2.50

In addition to the Air Force's scholarship aid, Embry-Riddle also offers University funded financial incentives to new high

school Air Force ROTC Tuition Scholarship winners. University incentives are offered at the discretion of the campus Financial Aid Office, not Air Force ROTC. University incentives include any University funded scholarships, grants, and awards. University funded incentives, in combination with funding from Air Force ROTC and other sources, cannot exceed the cost of education. Air Force ROTC Tuition Scholarship winners should contact the Financial Aid Office for more information regarding financial incentives funded by the University. For more information, contact:

<http://www.erau.edu/pr/rotc/afrotc>

Army Reserve Officer Training Corps

Army Reserve Officer Training Corps (ROTC) is open to both men and women, freshmen through seniors, and may lead to a commission as an officer in the U.S. Army. Army ROTC enhances a student's education by providing unique leadership and management training, along with practical experiences. The curriculum is designed to be challenging, educational, and flexible enough to allow students to meet scholastic and personal goals. Classes and training include leadership development, leadership problem-solving, tactics, physical training, map reading, land navigation, rappelling, rifle marksmanship, patrolling, drill and ceremony, military history, ethics, and military law. Students can earn 18 hours of academic

credit for completing four years of Army ROTC. Those who do so may be eligible for a Defense Studies minor. The ROTC courses may also be applied toward open elective requirements in degree programs. All uniforms, military textbooks, and equipment are issued to contract-eligible Basic Military Science freshman/sophomore cadets at no charge.

Army Reserve Officer Training

The Army Reserve Officer Training Corps program gives students an opportunity to acquire the skills and knowledge necessary for commissioning as a second lieutenant in the U.S. Army. The program offers a two, three, and four-year option. The two-year option allows students with at least two academic years remaining in college to meet all requirements for commissioning by attending basic camp or using past military experience for credit.

Basic Military Science

The Basic Military Science courses are offered during the freshman and sophomore years. These courses cover military organization, equipment, weapons, map reading, land navigation, use of compass, rank structure, threat, communications, leadership, and physical training. Each course consists of classroom instruction and a mandatory lab. Students are required to have a doctor's statement allowing participation in college-level physical education classes. Freshman and sophomore students may enroll in Basic Military Science classes with no obligation to the Army.

Advanced Military Science

The Advanced Military Science courses are taken during the junior and senior years.

These courses specialize in small unit tactics, preparation and conduct of military training, military justice system, staff procedures, decision making and leadership, managerial concepts, problem analysis, military writing, the ethics of the professional soldier, and physical training. The courses consist of classroom instruction and a mandatory lab. This phase requires attendance at a five-week National Leadership Development Assessment Course (LDAC) held at Joint Base Lewis McChord, Wash., during the summer after the junior year.

Leaders Training Course

A summer training program is offered for students without previous ROTC or military training who will be academic juniors. A five-week course at Fort Knox, Ky., during the summer after the sophomore year qualifies a student for entry into the Advanced Course, thus allowing completion of all requirements for commissioning in two years. Students attending the summer camp at Fort Knox receive approximately \$800. Students receive six hours of credit for the basic military science course upon completion of the Leadership Training Course.

Benefits

All contracted military science students receive a monthly stipend of \$300-\$500 per month.

Four-year, three-year, and two-year scholarships are available to those who qualify. The higher the student's GPA, physical fitness and SAT/ACT scores, the better their chance of being selected as a scholarship recipient.

Special Opportunities

All applicants must meet the following requirements:

- Be a U.S. citizen
- Be under 31 years of age prior to commissioning
- Meet required medical and physical standards
- Have a minimum cumulative academic GPA of 2.50
- Have a minimum SAT score of 920 or an ACT composite score of 19

Scholarship benefits include:

- Full tuition per year
- A subsistence allowance of \$300-\$500 per month
- A \$600 book allowance per semester
- In addition to the Army's scholarship aid, Embry-Riddle also offers University funded financial incentives to new high school Army ROTC Tuition Scholarship winners. Army Green to Gold Scholarship winners may be eligible for these incentives as well. University incentives are offered at the discretion of the campus Financial Aid Office, not Army ROTC. University funding includes any University funded scholarships, grants, and awards. University funding, in combination with funding from Army ROTC and other sources, cannot exceed the cost of education. Army ROTC Tuition Scholarship winners should contact the Financial Aid Office for more information regarding financial incentives funded by the University.

Admission to the Basic Course

Admission requirements are:

- Enrollment in a baccalaureate or master's degree program
- Must be at least 17 years of age at time of entry
- U.S. citizen
- Must maintain full-time student status each term

Admission to the Advanced Course

Admission requirements are:

- Successful completion of the Basic Course Leader's Training Camp or its equivalent
- Successful completion of the Army physical examination
- Selection by the Professor of Military Science
- Agree, whether scholarship or non-scholarship, to be contracted to complete the Advanced Course requirements and serve on active duty, reserve, or National Guard duty as a commissioned officer
- Maintain at least a 2.00 overall academic CGPA and a 3.00 ROTC CGPA
- Must maintain full-time student status each term

Army Green to Gold

If you are currently on active duty and will have two years of active duty before school starts and are accepted by Embry-Riddle as either a freshman, sophomore, or junior, you can compete for a Green to Gold four, three, or two-year scholarship.

You must have a GT score of 110 or

higher and a cumulative grade point average of 2.50 on a 4.00 grading system to be eligible for the three or two-year scholarship. A GT score is not required for individuals applying for a four-year scholarship. Four-year applicants must have a cumulative grade point average of 2.00 on a 4.00 grading scale. All applicants must meet other eligibility requirements. An SAT score totaling 920 or an ACT composite score of 19 is required for three and four-year Green to Gold scholarships.

For further information contact:

Embry-Riddle Army ROTC
Bldg. 17
3700 Willow Creek Road
Prescott, AZ 86301-3720
(928) 777-3870
fax: (928) 777-3772
<http://prescott.erau.edu/army-rotc>

Physical Training

All contracted cadets are required to attend physical training three days per week as part of the course grade. Physical training is normally conducted on Monday, Wednesday, and Friday from 6-7 a.m.

Marine Corps Programs

For freshmen, sophomores, and juniors, the Marine Corps offers the Platoon Leaders Course (PLC). Freshmen and sophomores attend two six week summer training sessions over two years and juniors attend one ten week training session. Both the six week and the ten week sessions are located at Quantico, Va. During the training sessions, candidates can earn from \$2,885 to

\$4,810, depending on which training session is attended. In addition, eligible candidates may apply for two financial assistance programs, the Marine Corps Financial Assistance Program (MCFAP) and the Marine Corps College Tuition Assistance Program (MCTAP). Call or visit the Web site (<http://officer.marines.com/>) to receive more information.

To be eligible for the program, the student must be a U.S. citizen (either native-born or naturalized), between the ages of 18-28 (exceptions are considered), full-time enrollment in a minimum of 12 academic credits per semester, minimum GPA of 2.0, and must be working toward an accredited/recognized baccalaureate degree.

The PLC Program offers two entry-level paths that lead to commissioning as a second lieutenant in the U.S. Marine Corps. The first is the Guaranteed Aviation Program. Applicants must have a qualifying ACT, SAT, or ASVAB score and must take the Aviation Selection Test Battery (ASTB). Those who have at least the minimum score of 4/6 on the ASTB; pass an aviation medical examination (performed at a Navy medical facility); pass a Marine Corps Physical Fitness Test (PFT); and are accepted into the program by Headquarters Marine Corps, will be eligible to receive a contract guarantee. The second program is the Ground Officer Program. This program encompasses over 20 military occupational specialties not directly related to piloting aircraft.

Openings are available for men and women with any major. Contact the Officer Selection Officer at (480) 894-0439 OR (602) 432-1204 (CELL).

ACADEMIC PROGRAMS

UNDERGRADUATE PROGRAMS

Embry-Riddle offers students opportunities to pursue academic programs in a wide variety of aviation and aerospace fields. Each degree program includes general education and academic specialization, the two components complementing each other. Detailed information about specific degree programs is listed by College and information on Minor courses of study follows in the subsequent section.

The following undergraduate degree programs are currently offered at the Prescott Campus.

College of Arts and Sciences

B.S. in Aviation Business Administration
B.S. in Aviation Environmental Science
B.S. in Global Security and Intelligence Studies
B.S. in Interdisciplinary Studies
B.S. in Space Physics
Still Exploring

College of Aviation

B.S. in Aeronautical Science
B.S. in Aeronautics
B.S. in Air Traffic Management
B.S. in Applied Meteorology
B.S. in Safety Science
Still Exploring

College of Engineering

B.S. in Aerospace Engineering
B.S. in Computer Engineering
B.S. in Electrical Engineering
B.S. in Mechanical Engineering
Still Exploring

Basic Skills Requirement

Embry-Riddle recognizes the importance of communication and quantitative skills in all areas of aerospace. Successful pilots, engineers, physicists, field agents, airport managers, aviation maintenance technicians, and other aviation professionals must possess these skills to perform their jobs effectively. Embry-Riddle, therefore, requires all students, including transfer students, to demonstrate proficiency in writing, reading, and mathematics before they are permitted to complete registration during their first term at the University. Proficiency may be demonstrated by earning qualifying scores on SAT/ACT tests or by transferring credit for college-level English and mathematics courses.

If they cannot demonstrate proficiency in basic communication skills, students must enroll in COM 020, Fundamentals of Communication, a reading, writing, and critical thinking skills course. If they cannot demonstrate proficiency in basic mathematics skills, students must enroll in a quantitative skills course (e.g. MA 006, MA 106) designed to help them prepare for mathematics courses required in the various degree programs.

Students whose primary language is not English are required to demonstrate advanced English proficiency by achieving a satisfactory score on an approved English proficiency test (e.g. TOEFL or IELTS). Students unable to demonstrate such proficiency must enroll in appropriate basic skills courses in their first term at the University.

General Education Introduction

Recognizing its general and special missions in education, Embry-Riddle embraces

Embry-Riddle reserves the right to terminate or modify program requirements and content, as well as the sequence of program offerings from term to term, for educational, financial, or other reasons that it determines are sufficient to warrant such action.

a general education program. This course of study ensures that students possess the attributes expected of all University graduates. Encouraging intellectual self-reliance and ability, the general education program enables students, regardless of their degree program, to understand the significance of acquiring a broad range of knowledge.

Throughout the general education program, students gain and enhance competence in written and oral communication. They practice reasoning and critical thinking skills and demonstrate computer proficiency. As students engage in this course of study, they familiarize themselves with and investigate ideas and methodologies from several disciplines including the arts and humanities, the social sciences, the natural sciences, and mathematics. The program also helps students recognize interrelationships among the disciplines.

Promoting the appreciation of varied perspectives, the general education program provides intellectual stimulation, ensuring that students are broadly educated. This course of study empowers students to make informed value judgments, to expand their knowledge and understanding of themselves, and to lead meaningful, responsible, and satisfying lives as individuals, professionals, and concerned members of their society and the world.

General Education Requirements

Embry-Riddle's general education program encourages effective learning and provides a coherent base for students to pursue their academic specializations. In specific support of the goals of general education, candidates for bachelor degrees must complete coursework or demonstrate competency in

the following areas. The faculty certify all coursework accepted for general education credit as advancing general education objectives. They additionally establish methods for students to demonstrate competency in these areas of study. **Because certain degree programs require particular courses in the general education program, refer to the degree requirements section of the catalog before selecting general education courses.**

Communication Theory and Skills

9 hours

In order to lead meaningful and responsible lives in complex societies, students produce, evaluate, articulate, and interpret information and meanings in oral and written communications.

Mathematics

6 hours

In order to develop quantitative reasoning skills and to use and understand the language of science and technology, students must demonstrate mathematical proficiency. Three hours may be satisfied by placement, examination, or course completion. The other three hours must be completed by taking a course that has college algebra as a prerequisite.

Computer Science/Information Technology

3 hours

In order to use computers and to understand and evaluate their significance in the solution of problems, students study the concepts, techniques, and tools of computing.

Physical and Life Sciences

6 hours

In order to appreciate current understand-

Academic Programs

ing of the natural world, students study the concepts and methods of the physical and life sciences, applying the techniques of scientific inquiry to problem-solving.

Humanities

3-6 hours lower-level

*3 hours 300-400 level

In order to participate in the complexity of human experiences that arise in a framework of historical and social contexts, students are exposed to the humanities. Areas of study may include cultural, aesthetic, philosophical, and spiritual dimensions of the human condition.

Social Sciences and Economics

3-6 hours lower-level

*3 hours 300-400 level

In order to understand interrelationships between the individual and society and connections between historical memory and the future, students examine the social sciences, including history, government, economics, psychology, or sociology.

* In order to experience advanced studies in either the Humanities or Social Sciences, students must choose at least one upper-level elective in the Humanities or Social Sciences.

University General Education Competencies

While taking General Education required courses, students develop a basic set of General Education skills (i.e., competencies, listed below) based on course learning outcomes. This skills set will be instrumental to student success in upper level courses within their degree program; in these courses students will practice application of this skill set, eventually demonstrating mastery before graduation. As a result, students will graduate with a set of General Education compe-

tencies that will provide the basis for success in life and on the job. The following skills are the competencies that all University students will develop, practice, and master in preparation for graduate school or the workplace.

Critical Thinking

The student will apply knowledge at the synthesis level to define and solve problems within professional and personal environments.

Quantitative Reasoning

The student will demonstrate the use of digitally-enabled technology (including concepts, techniques and tools of computing), mathematics proficiency and analysis techniques to interpret data for the purpose of drawing valid conclusions and solving associated problems.

Information Literacy

The student will conduct meaningful research, including gathering information from primary and secondary traditional or electronic sources and incorporating and documenting source material in his or her writing.

Communication

The student will communicate concepts in written, digital and verbal forms to present technical and non-technical information.

Scientific Literacy

The student will be able to analyze scientific evidence as it relates to the physical world and its interrelationship with human values and interests.

Cultural Literacy

The student will be able to analyze historical events, cultural artifacts, and philosophical concepts.

Still Exploring Engineering Freshman

Students exploring engineering who have not selected a specific degree program may, during their freshman year, enroll in the courses that are common to all the engineering disciplines. This enables an engineering student interested in engineering to explore the content of all the engineering programs over their freshman year prior to declaring a major at the beginning of their sophomore year. The courses apply toward any engineering degree. Still Exploring students should consult with the College of Engineering Academic Advisor, then select a degree program upon completion of the first year. After a degree program is chosen, a faculty advisor will be assigned to the student to discuss courses to take and future career goals. Pre-college preparation in math and physics is essential for success in engineering. If it is necessary to enroll in more basic math and physics courses to ensure that preparation, students should understand it may take them longer to complete the degree they choose.

The First-Year Engineering Program

The Freshman Engineering Program is a joint responsibility between the College of Engineering and all departments in the College. The purpose of this coordination is to ensure success of all engineering programs at the freshman level. In industry, engineers in a certain discipline have to work with engineers in other disciplines, so it is in the best interest of our engineering students that they interact with students in other engineer-

ing programs. This is accomplished via team projects and several common engineering courses.

The First-Year Program ensures that instructors involved in the program have the appropriate quality and experience to teach the freshman courses. The program maintains consistency in the continuous processes of outcomes assessment throughout all the College of Engineering curricula as required by the program's accrediting agencies.

The College of Engineering First-Year Advising Program focuses on advising and retaining all engineering freshmen.

GRADUATE PROGRAMS

The University currently offers the following graduate degree programs at the Prescott Campus.

College of Aviation

M.S. in Safety Science

Ph.D. in Aviation

Master of Science in Safety Science

The Master of Science in Safety Science (MSSS) degree program is designed to provide students with a practical course of study in occupational health and safety. The degree will produce safety professionals who are skilled in providing safety management expertise in a variety of industries. Graduates will be able to provide leadership and guidance in compliance issues involving EPA, OSHA, DOD, FAA, DOE, NTSB and state health, hygiene, and workplace standards, and will be prepared for service in numer-

Academic Programs

ous industries, including but not limited to the aviation/aerospace industry and the military. For detailed information about the MSSS degree program, including Graduate Assistantships, Graduate Internships, and Guidelines for Graduate Research Projects and Thesis, see the complete program listing in the College of Aviation section of this catalog.

Doctor of Philosophy (Ph.D.) in Aviation

The demand for aviation professionals with the skills to conduct research and solve problems continues to grow in response to the increasing complexity and evolution of the aviation field. The Ph.D. in Aviation program is designed to address that need by allowing students to pursue doctoral studies in aviation in a diverse, intellectually versatile and multi-disciplinary environment. It is the first Ph.D. in aviation in the U.S.

Courses are offered online for greater accessibility to the working professional. Participation in three six-day on-campus residency seminars is required during the program. This program format provides doctoral degree students an innovative way to achieve their personal, educational, and professional goals.

The Ph.D. in Aviation program is designed to enable students to achieve the following learning objectives: develop mastery of the central theories and concepts in the field of aviation, including foundations, safety management, economics, and regulatory procedures; pose and solve theory-based and research-based problems designed to advance applications in the field of aviation; extend

the aviation body of knowledge by conceiving, planning, producing, and communicating original research; develop and demonstrate expertise in instructional processes; and demonstrate leadership, collaboration, and communication necessary for scholarly work in aviation.

Courses are offered during three 15-week terms per year. The program requires completion of four aviation core courses, a four-course sequence in statistics and research methodology, and four specialization or cognate courses. A qualifying exam tests student's mastery of core and cognate subject matter and is conducted at the end of the course work.

Completion and defense of a dissertation is the final phase of the program. The dissertation is a formal academic paper that constitutes the culmination of the doctoral program.

The purpose of the dissertation is to prepare students to be professionals in a discipline, to develop the skills necessary to engage in independent research, and to advance the body of knowledge in aviation. The program requires completion of 90 credit hours of course work, residency seminars, and dissertation courses, including 30 credit hours from the student's master's degree.

Specific information about the program, including admission and course requirements, can be found in the Embry-Riddle Aeronautical University Doctoral Programs Catalog, and at the program website: <http://aviationphd.erau.edu>.

College of Arts and Sciences

Dr. Archie Dickey, Dean

Welcome. Our programs and curricula encompass the humanities, communication, strategic languages, the physical and life sciences, the social and psychological sciences, mathematics, economics, business, management, security and intelligence studies, and military science. In essence, our wide variety of offerings signifies that our College puts the universe in university. Through our academics we offer mental, physical, and spiritual enrichment so that our students can succeed in all areas of life from the professional to the personal. We are totally committed to helping our students develop as scholars, professionals, and citizens.

Cherished pursuits of the College are developing leaders; inculcating moral and ethical integrity; helping to resolve local, regional, national, international, and global issues; and supporting both the uniqueness of the individual and the integration of the individual into the larger community.

General Education. The College offers courses in mathematics, the physical and life sciences, the social and psychological sciences, information technology, humanities, communication, economics, business, management, and security and intelligence studies. These courses provide essential knowledge supporting all University degree programs. They also provide an intellectual and emotional grounding necessary for 21st century success on the student's terms. Finally, they shape the priceless competencies of speech, writing, close reading, quantita-

tive analysis, qualitative analysis, aesthetic apperception, critical thinking, moral and ethical judgment and behavior, and leadership. Our General Education courses provide our students a strong foundation for success, not only in their degree programs but in their careers after graduation.

Degree Programs. The College offers five degree programs: Aviation Business Administration, Aviation Environmental Science, Global Security and Intelligence Studies, Interdisciplinary Studies and Space Physics.

U.S. Army and U.S. Air Force ROTC. ROTC activities are administratively situated in the College to ensure the highest quality educational experience for all ROTC cadets. Please refer to the Special Academic Programs and Opportunities section of the catalog for more information.

Federal TRIO Programs. The Upward Bound program provides educational services and programs for college-bound students from disadvantaged backgrounds as described in the Higher Education Act of 1965, Title IV, Part A, Subpart 2. The prestigious Ronald E. McNair Scholars Program offers financial aid, academic, and other professional support to eligible underserved (low income/first generation) or under-represented (minorities and women in certain degree programs), upper-division students who desire to pursue graduate studies after graduation from Embry-Riddle. Please refer to the Financial Assistance section of the catalog for more information.

Academic Programs at the Prescott Campus

National Aeronautics and Space Administration (NASA) Education Resource Center. Our math and science faculty are engaged in developing and implementing novel education and training opportunities for students and teachers from kindergarten through high school. This engagement is possible through the support of and in coordination with NASA and is unique with its innovative outcome assessment techniques founding program quality.

International Education. All students have the option of receiving a portion of their undergraduate education at selected universities in Europe, Asia, Latin America, Africa, and the Middle East. Other international education experiences include co-ops and internships. The College matches the needs of each student with prospective academic institutions and venues.

Professional Consultation. Faculty work on grants, contracts, and consultancies with federal, state, and local governments. These faculty members also set world standards in partnership with corporations and other business and industrial entities. Finally, they shape public opinion through extensive mass media communication. Of special note are the College's Global Security and Intelligence Studies (GSIS) faculty, who continue to break new ground in aviation security, homeland security and defense, antiterrorist and counterterrorist policy, and international risk and threat assessment with its faculty-student intelligence product, The Eagle Eye, and new Eagle Operations Center. As well, the Aviation Business Administration (ABA) program

is renowned for its faculty-led student teams providing ad hoc consulting for airports and other transportation sites and for its consulting with the Transportation Research Board and the Arizona Aerospace and Defense Commission.

Scholarly Accomplishment. All faculty are engaged in creating knowledge that benefits not only their scholarly discipline but also the world at large. Knowledge may be basic or applied and covers all the arts and sciences. Students often work closely with faculty on grants, contracts, and other scholarship pursuits. Of special note are our Space Physics faculty and students who epitomize learning through scholarship and research, for example, one area of specialization involves the laser interferometer gravitational wave observatory. Another source of excellence is the FAA-sponsored research undertaken by our Aviation Environmental Science faculty into critical areas of inquiry such as bird-strike investigations, while our ABA faculty have literally "written the book" on airport management and aviation labor relations. Yet another growing area of excellence is in the empirical validation of novel service learning activities.

Conclusion. At the Prescott Campus, the College of Arts and Sciences works closely with the Colleges of Aviation and Engineering. The result is a seamless and unsurpassed educational experience that places the student on the road to professional, social, and personal success.

Aviation Business Administration

Bachelor of Science

The Aviation Business Administration degree program, offered by the Department of Business, reflects the ever-changing and demanding environment of business, government, and the aviation industry. The curriculum is designed to provide graduates with the knowledge and skills essential to their successful entry into business and society. Emphasis is placed on effective communications, quantitative skills, global awareness, social responsibility, information technology, critical thinking skills, teamwork, business functional skills, aviation/aerospace industry familiarity, and a commitment to lifelong learning.

This degree program offers a unique educational experience for the business-focused student. It is the appropriate foundation for entry into career opportunities in business, aviation management, finance, or flight operations. Course requirements include computer applications, group/individual projects and presentations, and a blend of theory and applications to best prepare students for a variety of positions in the workplace. Colloquia, forums, visiting speakers, interesting field trip experiences, and interdisciplinary opportunities/activities serve to enrich the curriculum.

Diverse elective courses allow students to broaden their general education interests or pursue specific interests in many specialized areas, including international commerce, economics/finance, aviation/aerospace, security and intelligence, the environment, aviation safety, and culture and language. A variety of unique “minors” (minor programs of study) are available for interested students wishing to supplement their formal academic preparation with specialized coursework in more than 20 additional areas of study.

Active business/aviation related clubs on campus include *Phi Beta Lambda* (a business-focused organization providing students an opportunity to travel to state and national leadership conferences for participation in competitive events) and the *American Association of Airport Executives* (an aviation management-focused association, with prior travel to Chicago, Las Vegas, Toronto, Seattle, San Francisco and Hong Kong).

Our students are encouraged to think beyond traditional academic boundaries and seek workplace and cultural experiences that will enrich and enlighten them on the evolving workplace and the global business environment. Unique internships and cooperative educational experiences are available and encouraged, with staff assigned to assist students in position identification and placement. Numerous summer-abroad experiences are available for students wishing to increase their international perspectives. Previous summer-abroad academic programs have been offered in Paris, London, Italy, Poland, China, Germany, Ecuador, Chile, and Mexico.

A Business Industry Advisory Board provides guidance on the needs of business, government, and the aviation industry. Department-sponsored tutoring and labs are available.

Dedicated faculty advisors assist ABA students in evaluating the many opportunities available to them in this program. Some courses may require prerequisite subject knowledge or particular class standing. Course descriptions, included in this catalog, should be reviewed prior to registering for classes, to ensure proper placement.

Academic Programs at the Prescott Campus

Degree Requirements

The Bachelor of Science degree in Aviation Business Administration (ABA) requires successful completion of a minimum of 120 credit hours, and is normally completed in eight semesters. Designed for students interested in obtaining a strong business foundation with emphasis on specific aviation applications, the student may select an Area of Concentration in Management, Finance, Flight Operations-Fixed Wing, Flight Operations - Helicopter, and Airport Management.

Students should declare their Area of Concentration at the beginning of their sophomore year. Students who want to specialize in more than one Area of Concentration may cross-utilize up to 6 credit hours toward the second area of concentration. Students who participate in the Cooperative Education program may substitute up to 6 credit hours, if approved, toward the specified courses required in their Area of Concentration.

Students enrolled in the Air Force or Army ROTC program may substitute AF or MSL courses for the open elective courses.

Select Aviation Business Administration program offerings at the Prescott Campus are accredited by the Aviation Accreditation Board International (AABI). The Embry-Riddle Aeronautical University – Prescott Bachelor of Science degree program in Aviation Business Administration is a member of the Association of Collegiate Business Schools and Programs (ACBSP) and is in candidacy for accreditation. In order to be awarded an ABA degree, a student is required to complete a minimum of 80% of the business core and area of concentration in residence or transfer those credits from institutions approved by the Department Chair.

Aviation Environmental Science

Bachelor of Science

The Bachelor of Science degree in Aviation Environmental Science (AES) is designed to develop leaders and global citizens for the 21st century by providing students with a multidisciplinary education including both theoretical and applied knowledge in the field of aviation environmental science. This degree gives students precisely the knowledge and technical skills needed to tackle the environmental and safety problems found in the aviation and aerospace industry.

Our graduates will be uniquely prepared to understand and function effectively in the complex and varied world of aviation environmental science. Our graduates will be able to secure positions in the fields of environmental consulting, aviation regulation, and consultation to industry and government, such as environmental protection specialist for FAA, EPA, and federal and state air quality specialist, and airports and municipalities' environmental specialist.

Degree Requirements

The AES program consists of several components: general education, AES core, designated electives, and a co-op experience. The general education element provides the fundamentals in math, social sciences, computers, and communication. The AES core is designed to give the student basic science knowledge and demonstrate the ways in which business, economics, geography, and policy studies integrate with environmental aspects of their future careers. AES students are also required to complete a co-op experience prior

to graduation. This experience will link their AES academic work with their professional future. The Bachelor of Science in Aviation Environmental Science (AES) requires successful completion of a minimum of 120 credit hours.

Global Security and Intelligence Studies

Bachelor of Science

The Bachelor of Science degree in Global Security and Intelligence Studies (GSIS) is designed to develop future security and intelligence professionals with a broad understanding of global interrelationships in politics, law, government, economics, social change, science and technology, military developments, psychological dimensions of military and terrorist threats, cyber-security, environmental security issues, and human cultures. The program will explore the implications of these multiple factors to the security of nation-states and the future of human society in a global context.

The program provides the student with the interdisciplinary skills to analyze the interactions between all these elements and to communicate their ideas effectively in both written and oral contexts. Above all, GSIS students will be able to exhibit innovative problem-solving and critical-thinking skills in issues such as terrorism and asymmetrical warfare, transportation (especially aviation and aerospace) security, threats to corporate personnel and facilities, threats to computer and telecommunications infrastructure, trafficking networks in illicit services and substances, proscribed weapons technologies such as weapons of mass destruction, international crime, population migrations, natural disasters, pandemics, and homeland security.

Global Security and Intelligence Studies students will be very competitive in obtaining positions and performing (1) with federal government intelligence, security, law

enforcement and emergency management agencies (2) with the Department of Defense and the armed services (3) with security, competitive intelligence and information protection departments in the private sector especially those involved in aviation and transportation security (4) with state, county and local homeland security, law enforcement and emergency management organizations, (5) as students in graduate schools focusing on intelligence and national security, international relations, regional studies, (6) as students in law schools (7) as staffers for political leaders and legislative representatives specializing in national intelligence and security issues.

Degree Requirements

The GSIS program consists of seven interrelated components: general education, a GSIS core, area of concentration, electives, foreign languages, senior project, and an optional co-op or study-abroad experience.

The general education requirement provides the fundamentals in the sciences, mathematics, the social sciences and liberal arts, oral and written communication, and computer operations and applications.

The science requirement deepens the student's knowledge and understanding of science and technology, key areas for the security/intelligence student.

Together, the GSIS core is a multidisciplinary array of courses that brings a number of fields to the study of security and intelli-

Academic Programs at the Prescott Campus

gence, including geography, forensic science, the law, economics, psychology, government and foreign policy, and the history of intelligence.

The GSIS core and the designated electives are designed to demonstrate the ways in which societies and cultures, economies, systems of thought, military developments, and environmental concerns are shaping the international system.

In the senior year, the GSIS major will select one of three areas of concentration: Pre-Law and Government, Intelligence, or Criminal Justice and Security. Each area of concentration contains at least five courses, allowing the student to gain a deeper understanding in a more specialized field. A fourth option for the area of concentration is to choose a total of five courses from both Intelligence and Security, two from one and three from the other. This would be counted as an area of concentration in Intelligence and Security.

GSIS students are required to complete a senior project prior to graduation. The options include a senior thesis (SIS 475), a senior internship including a research paper (SIS 470), or a semester-long capstone course including a simulated intelligence and security scenario using the GSIS operations center (SIS 415). The senior internship is designed to provide the students with practical experience and increase their employment opportunities. The capstone scenario will enable the student to demonstrate his or her knowledge and understanding gained in the GSIS Program in a simulated crisis situation in a real-world environment. The thesis will encompass significant research into a topic relevant to security and intelligence studies and provide original recommendations and conclusions.

The GSIS program encourages students to gain international experience through travel

or study abroad. It promotes a strong grounding in history, a capacity for critical thinking, good writing and communication skills, and, in the selection of designated and open electives, a knowledge and appreciation of the arts and humanities.

Because knowledge of a second language, or indeed multiple languages, is an essential skill for the intelligence and security professional today, GSIS students must meet a foreign language requirement.

The Bachelor of Science in Global Security and Intelligence Studies (GSIS) requires successful completion of a minimum of 122 credit hours.

Three Degree Tracks

The GSIS degree program provides the student with three curricular tracks: the Standard track, the Security Operations Management track and the Chinese track.

Students who take the Standard track are required to demonstrate oral and reading competency in a language other than English, or by taking 12 credits of college-level foreign language courses in one language.

The Security Operations and Management track is geared towards those interested in a career in security and protection; either in private industry or with a governmental security and intelligence agency. Course requirements for this track include 12 hours of foreign language, general education courses, GSIS core classes and 33 credits in specialty courses.

Students who take the Chinese track will take the same subject area courses and the same number of credits as those in the Standard or Security Operations Management tracks. The overall difference is that, in the Chinese track, students will take 45 credits in courses that will be entirely in Chinese or have a significant Chinese component with

Academic Programs at the Prescott Campus

supplementary reading and writing assignments in English, rather than the 12 credits in a foreign language required by the other two tracks. The Chinese track is not open to native speakers of Chinese. The 45 credits include the 12 required foreign language credits for the Standard track, the 9 credits in the Chinese Minor, and 24 additional credits which will be offered by teaching content courses in Mandarin Chinese with supplementary reading and writing assignments in English. Study abroad in the summer of the sophomore year is required for Chinese track students.

Suggested Program of Study

Students in the Chinese Track must meet with their advisor each semester to discuss their study plan and are required to complete a study abroad session the summer after their sophomore year

Academic Programs at the Prescott Campus

General GSIS Program Notes

* Non Chinese track GSIS students may meet the foreign language requirement in several ways:

- Complete 12 credit hours of one foreign language at ERAU
- Transfer 12 credit hours of one foreign language from another accredited institution of higher education.
- Transfer less than 12 credit hours of one foreign language from another accredited institution of higher education and complete the remaining credit hours in the same language at ERAU with the language instructor's approval.
- Take an approved national foreign language examination such as those offered by Brigham Young Foreign Language Achievement Testing Service (FLATS) Examination ,DOD Defense Language Proficiency Tests or AP Advanced Placement Tests and apply for Advanced Standing.
- Take a Course Equivalency Examination receive credit for one or all of the equivalent language courses with the language instructor's and the appropriate department chairperson's approval.

Students should contact Dr. Leeann Chen, the GSIS Program Language Coordinator, with any questions they may have.

**Senior Cooperative Internship must be with a federal security or law enforcement organization and must be approved by the GSIS Program Chair.

Interdisciplinary Studies

Bachelor of Science

Program Plan of Study and Requirements

The Interdisciplinary Studies program consists of core requirements and three minors. The core requirements in this program help our students to become worldly thinkers who understand that information and skills gleaned from one area of life can be applied to other areas. The program's core requirements respond directly to calls by American corporate leaders for graduates who understand both technology and human beings. To that end, students choose from courses in the humanities, geography, international studies, philosophy and ethics, foreign languages, and psychology. The core prepares students to connect their three minor fields of study meaningfully and usefully. The student chooses a senior capstone experience which most often is the election of a co-op experience.

By combining three minors, students design their own degree programs. Such combinations as security, psychology, safety studies, computer science, or psychology offer combinations of fields that the aerospace industry will find valuable. A minor in Asian Studies, coupled with the enhanced general education options, provide an international focus to the degree. Minors in the business areas gives students practical knowledge that combine well with the more technical areas, while a minor in Helicopter Flight remains a popular aviation-related choice. The element of choice in the program gives students experience in planning their own futures. The

program seeks to produce students with an entrepreneurial spirit who will cross boundaries, make creative connections, and become leaders in aviation, aerospace, and related industries.

Students meet regularly with the interdisciplinary studies program chair or faculty advisors to develop and revise their individual plan for degree completion. This plan involves evaluating their career objectives and selecting three appropriate minors.

Students should be aware that several courses in each academic year may have prerequisites and/or corequisites. Check the course descriptions at the back of this catalog before registering for classes to ensure appropriate sequencing.

Degree Requirements

The Bachelor of Science degree in Interdisciplinary Studies requires successful completion of a minimum of 120 credit hours, including a minimum of 40 credit hours of upper-division courses (300-400 level).

Space Physics

Bachelor of Science

The Bachelor of Science in Space Physics is an applied physics program designed to prepare students for graduate studies in physics and astrophysics, as well as for work in space-related, and aerospace-related industries. Physics is the study of the forces of nature, space and time at the most fundamental level, and provides the foundation on which all physical sciences rest. Students will study the structure of the universe on all scales from the smallest (elementary particles) to the largest (cosmology) and will gain hands-on experience with research-quality equipment and modern sensing techniques.

In their senior year, students satisfying course and GPA requirements have the option of completing a senior thesis project in an area of interest that overlaps with the research interests of a supervising faculty member. Current faculty interests include: astrophysics, particle physics and cosmology, gravitational waves, general relativity, and exotic propulsion.

Admission Requirements

To enter this program, students must have completed four years of high school science and mathematics, demonstrating a high level of competency. Successful candidates for this program will be prepared to enter Calculus I, Physics I, and General Chemistry and must have a good command of written English.

Degree Requirements

The Bachelor of Science in Space Physics is a 120 credit hour program that can be completed in eight semesters. The list of courses below comprises the complete requirements for the degree of Bachelor of Science in Space Physics. The list is organized as a “vertical outline” according to the year in which the courses would normally be taken. While it is not a requirement that the courses be taken during the year shown, students should be aware that several courses in each academic year may have prerequisites and/or corequisites. Therefore, it is recommended that students keep their schedule as close as possible to the one shown below. Before registering for a course, check the course descriptions at the back of this catalog to ensure that all prerequisites and/or corequisites are met. Note that prerequisites for a course are only considered met if the student obtained a grade of “C” or better in the prerequisite courses.

TOTAL DEGREE CREDITS

120

* Embry-Riddle courses in the general education categories of Communication, Humanities, and Social Sciences may be chosen from those listed below, assuming prerequisites are met. Courses from other institutions are acceptable if they fall into these broad categories and are at the appropriate level.

**Open elective or in excess of degree requirement.

*** In their senior year, eligible students will choose a thesis project in association with a supervising faculty member. Students who are not eligible to take PS 490 and PS 491 will instead take 6 credits of technical electives selected from the list below. Eligibility for taking PS 490 is described in the prerequisites for the course in the course description section of the catalog.

Communications Electives

COM 122, COM 219, COM 221, COM 222, COM 225, or any COM 3XX or COM 4XX course.

Lower-Level Social Sciences Electives

EC 200, EC 210, EC 211
Any Lower-Level SS, RS, or SIS course.

Lower-Level Humanities Electives

Any HU 140 series.

Upper-Level Humanities Electives

Any Upper-Level HU course.

Upper-Level Social Sciences Electives

Any Upper-Level SS course.

Technical Electives

- PS 322 Classical Mechanics II
- PS 331 Electricity and Magnetism II
- PS 375 Planetary Science
- PS 408 Astrophysics II
- PS 412 Particle Physics and Cosmology I
- PS 413 Particle Physics and Cosmology II
- PS 420 Remote Sensing
- PS 422 Space Propulsion
- PS 451 Quantum Mechanics II
- PS 299/399/499 Special Topics in Physics
- MA 412 Probability and Statistics
- MA 443 Complex Variables
- MA 299/399/499 Special Topics in Mathematics

Any other upper-division technical course with approval of the Physics Department Chair.

College of Aviation

Dr. Gary Northam, Dean

The College of Aviation is composed of the departments of Aeronautical Science, Meteorology, Safety Science, and the Flight Department, which serves as the flight laboratory component for the Aeronautical Science degree.

The College offers undergraduate degree programs in Aeronautical Science, Applied Meteorology, Aeronautics, Air Traffic Management, Safety Science and a Masters Degree in Safety Science.

The Aeronautical Science Program, combines flight training with academic preparation in the technical and managerial aspects of aviation. This approach to aviation education provides students an added value over traditional flight training programs by focusing on the skills and knowledge required in today's industry. Foundational skills in mathematics, physics, communications, and aeronautics, including FAA certification as a multi-engine instrument-rated commercial pilot, make up the core of the Aeronautical Science degree. Professional-level aeronautical science and flight courses prepare the graduate for a career as a professional civil or military pilot. The program also provides a foundation for further development in aircraft safety and meteorology.

The Prescott Campus also offers a B.S. in Aeronautics, in which the curriculum is designed to build on the aviation knowledge and skills students bring with them to campus.

The B.S. in Applied Meteorology prepares students for careers in meteorology, including weather forecasting, research,

the military, and aviation, including dispatching. The program is housed in a well-equipped, modern facility. The program meets all the requirements for undergraduate study in meteorology recommended by the American Meteorological Society, the National Weather Service, and the U.S. Air Force. Graduates also meet U.S. Office of Personnel Management Qualification Standards for the position of meteorologist. The department offers state-of-the-art rooftop weather-observing equipment and a computer-equipped Weather Center.

The B.S. in Safety Science provides the student with skills and knowledge for a career in Aviation Safety or Occupational Safety and Health. The program delivers an effective foundation in safety that prepares the student for any industrial setting and allows each student to select an Aviation Safety or Occupational Safety and Health area of concentration (AOC). For the graduate student, the Master of Science in Safety Science is offered. This degree program provides the graduate with experiences to enhance the practice of safety in the aviation and general industrial environments. The program prepares graduates for several professional job settings, such as director of safety in industry and government, operational and maintenance safety personnel, aviation or industrial safety personnel, flight safety personnel, and aircraft accident investigation.

Students enrolled in the Flight program fly a mix of aircraft, many with advanced avionics, and several state-of-

Academic Programs at the Prescott Campus

the-art Flight Training devices. Embry-Riddle has positioned the College of Aviation to serve its students with distinction while investigating and developing new education and programs for pilots, meteorologists, and safety and security professionals.

Air Traffic Control – Collegiate Training Initiative (AT-CTI): The Federal Aviation Administration (FAA) approved AT-CTI program at the Prescott campus includes the following degree programs: BS in Aeronautical Science, BS in Aeronautics and BS in Applied Meteorology. By current FAA mandate, only students enrolled in one of these degree programs is eligible for inclusion in the AT-CTI program. Students who declare and enroll in one of these three majors may request enrollment in the Air Traffic Control minor area of concentration and may then become eligible for the AT-CTI program by satisfactorily completing the required courses.

The current recommended path to becoming an air traffic control specialist with the FAA is to earn the Bachelor of

Science degree in Aeronautics combined with the Air Traffic Control minor. This degree/minor combination provides the aviation background and the professional skills needed for eligibility to become an FAA air traffic controller.

For the student who desires to attend the FAA AT-CTI training but desires to broaden their knowledge and earn a BS degree in meteorology, they can select the Applied Meteorology degree program with the ATC minor.

For those students wanting to earn flight (pilot) certificates, they may select the Aeronautical Science degree program and combine that major with the ATC minor.

Note: The University cannot guarantee selection or employment as an air traffic controller for students completing the AT-CTI program because selection of FAA air traffic controllers for admittance to the FAA Air Traffic Control Academy and a follow-on assignment as an air traffic controller is done strictly at the discretion of the FAA and based upon their staffing needs.

Aeronautical Science (Professional Pilot)

Bachelor of Science

The Aeronautical Science degree program blends flight training with rigorous academic study in a unique manner that provides a strong foundation for a career as a leader in the aviation industry, including airlines, corporate and commercial aviation, or the military. This approach to aviation education gives the student an added value over traditional flight training programs by focusing on the skills and knowledge required by today's industry. The curriculum provides skills in mathematics, physics, communications, and aeronautics, including FAA certification as a multi-engine instrument-rated pilot. The last two years of matriculation include extensive professional-level Aeronautical Science and flight courses that prepare the graduate for a career as a professional pilot, including airline flight crew operations in multi-crewmember jet transport aircraft. Critical-thinking and problem-solving skills are developed via computer simulations in aircraft performance, navigation, and aircraft systems operation. Effective resource management, human factors, and safety awareness are constantly emphasized throughout the curriculum.

The BS in Aeronautical Science degree requires the student to complete MA 111 and MA 112. For students without the mathematics proficiency needed to begin MA 111, they will be enrolled in MA 106 for their initial mathematics course.

Aeronautical Science degree requires the completion of a capstone course. This course

is to be taken as a last semester senior year degree requirement for graduation.

Degree Requirements

The Bachelor of Science degree in Aeronautical Science may be attained in eight semesters. To earn the degree, successful completion of a minimum of 120 credit hours is required. The purpose of the Aeronautical Science degree program is to prepare the graduate for a productive career as a professional pilot and responsible citizenship in support of aviation and aerospace industries. Upon completion of the curriculum, the student will possess an FAA Commercial Pilot Certificate with single, multi-engine and instrument ratings. Optional advanced flight training includes upset recovery training, certification as a flight instructor and instrument flight instructor, and training as a flight crewmember in a jet transport aircraft.

Students pursuing the Aeronautical Science degree will select one of four specializations after matriculation. Students entering under this catalog may select from the Airline Pilot, Commercial Pilot, Helicopter Pilot, or Military Pilot specializations. Please see the section concerning the restrictions imposed by the Aviation Transportation and Security Act. All students must complete the general education courses, Aeronautical Science core courses, and the courses required to complete one specialization to earn the Aeronautical Science degree.

Suggested Program of Study

Airline Pilot Specialty

The Airline Pilot Specialty is designed for students whose goal is to fly for a scheduled airline. The academic and flight courses are designed to provide exposure to procedures and operations consistent with those found at air carriers. The upper-level AS courses are very technical and provide the foundation for the capstone flight courses that are designed to be consistent with current airline transport pilot requirements.

Commercial Pilot Specialty

The Commercial Pilot Specialty is designed for pilots with career interests requiring a more flexible degree program. The Aeronautical Science core course integrity is maintained, while allowing greater opportunity for the selection of courses to meet the needs of corporate and other segments of the aviation industry not specifically addressed by the Airline Pilot or Military Pilot specialties. One minor must be completed to meet

the degree requirements of this specialization.

Helicopter Pilot Specialty

The Helicopter Pilot Specialty program has been developed to provide the aeronautical knowledge necessary for a student to acquire the necessary skills needed to operate in the field of helicopter aviation. The initial academic and flight courses are designed to provide the basic foundation in aerodynamics, regulations, weather, and flight planning. The upper-level Aeronautical Science courses offer managerial and critical thinking techniques needed for advanced helicopter operations. All helicopter flight activities must be completed with the approved University provider.

Aeronautical Science Notes

* Embry-Riddle courses in the general education categories of Communication Theory and Skills, Computer Science, Humanities, Social Sciences, and Management may be chosen from those listed below, assuming prerequisite requirements are met. Courses from other institutions are acceptable if they fall into these broad categories and are at the level specified in the Aeronautical Science vertical outline.

Communication Theory and Skills

COM 122, 219, and 221 or 222

Computer Science

IT 109 or CS 118

Humanities

LOWER-LEVEL:

HU 140, 141, 142, 143, 144, 145, 146

UPPER-LEVEL:

HU 300-400 level

Social Sciences

LOWER-LEVEL:

PSY 101, EC 210 or EC 211, SS 110, 120, 130, 204,210 (Military Pilot Specialty must take PSY 101 and SS 110, 120, or 130.)

UPPER-LEVEL:

SS 300-400 level or PSY 350

**UNIV 101 meets open elective or credit in excess of degree requirement

*** Flight education is a continuous process that normally begins sometime during the student's first year of attendance and will progress until culminating in a multi-engine commercial certificate with an instrument rating. The curriculum is designed to allow students to meet core objectives in a reasonable amount of time.

Various factors influence student progress. These factors include student academic preparation, student availability, student determination and dedication, the availability of aircraft and instructor pilots, and the cooperation of the weather. Consequently, some students will finish before others. After completing the core curriculum, students may take an additional semester or more to acquire additional advanced certificates and ratings, including those for single-engine commercial, certified flight instructor airplane and instrument, and/or they may enroll in the Airline Flight Crew Simulation course.

Academic Programs at the Prescott Campus

After matriculating, all remaining FA courses required for the Aeronautical Science degree must be completed at Embry-Riddle or at another AABI-accredited college/university. Students who have begun training on an FAA certificate course prior to enrolling at Embry-Riddle may obtain written permission to complete that ONE course outside Embry-Riddle.

Courses for all other FAA certificates required for the Aeronautical Science degree must be completed at Embry-Riddle or at another AABI-accredited college or university.

All students enrolled in the Aeronautical Science degree program must complete at least one flight course successfully at Embry-Riddle. All Embry-Riddle students must obtain written permission in advance for any flight training outside Embry-Riddle.

See the Flight Department chair to obtain an Off Campus Flight Authorization Request form. All details regarding course and credit requirements and the approval process will be provided upon application. Students who have acquired FAA pilot certificates prior to enrolling at Embry-Riddle will receive credit for the appropriate courses and will be placed in the next sequential course in the degree program. See the Flight Department chair concerning exact credit.

Enrollment in flight courses requires proof of U.S. citizenship or a Department of Justice background check for international students. Please see the Aviation Transportation and Security Act under the Admissions section of this catalog.

Aircraft Dispatcher Certification Program

For the student interested in airline flight operations management, Embry-Riddle offers a program to prepare the student for Aircraft Dispatcher certification testing. Upon suc-

cessful completion of the required curriculum and the FAA Dispatcher Written Examination, the student will be eligible to take the FAA Dispatcher Practical Test with instructor authorization.

Certificated aircraft dispatchers are employed by airlines to manage the ground-based tasks vital to successful airline operations. Dispatchers share responsibility with the captain for preflight planning and preparation of the dispatch release, monitoring the progress of the flight, issuing safety-of-flight information to the crew, and canceling or re-dispatching the flight.

To carry out these tasks properly, dispatchers must be knowledgeable in aircraft performance capabilities, meteorology, operating regulations, air traffic control, and instrument flight procedures. They must also exhibit strong aeronautical decision-making skills incorporating the priorities of safety, passenger comfort, and economic considerations.

Certification Requirements

The Aircraft Dispatcher Certification program is available at the Prescott Campus. Dispatcher preparation is based on the successful completion of the following courses and the applicable prerequisites.

Course	Title	Credits
AS 221	Instrument Pilot Operations	3
AS 310	Aircraft Performance	3
AS 350	Domestic and International Navigation . . .	3
AS 410	Airline Dispatch Operations*	3
AT 200	Air Traffic Management I	3
WX 201	Survey of Meteorology	3
WX 301	Aviation Weather	3
Total Credits		21

* AS 410 serves as the capstone course for the Aircraft Dispatcher program.

Embry-Riddle occasionally changes a course number designator or nomenclature without materially affecting course content. In these cases, the program evaluator will substitute the equivalent course for those above.

Academic Programs at the Prescott Campus

For those students who possess a Private or Commercial Pilot Certificate with Instrument Rating, this training and experience may be used as equivalent for AS 221, AT 200, or both, and constitutes a minimum of 70 hours of experience.

This program is offered within the academic programs at ERAU and not as separate training. Qualification for FAA testing normally requires a minimum of six semesters of instruction. To complete the Aircraft Dispatcher Certification program, the student must earn a “C” grade or higher in all required courses. For more information, contact the Dispatch Program Manager in the Aeronautical Science Department.

Pilot Advancement Certification Program

For those individuals already possessing a bachelor’s degree who are interested in furthering their flight training beyond the Private Pilot level, Embry-Riddle offers a certificate program designed to deliver advanced levels of flight certification. The courses associated with this program are tailored to meet individual needs that build upon previously garnered flight experiences (e.g., military, FBO, etc.). This certificate program does not require enrollment as a full-time degree seeking student. The students enrolled in this program attend aeronautical science academic courses and train in the same flight courses as our regular four year degree students. At the successful completion of this program, the student attains, as a minimum, an FAA Commercial Pilot Certificate with an Airplane Single-Engine and/or Multi-Engine Land rating(s). Further pilot advancement training is available based on individual student needs. Advanced flight training and/or FAA certification includes upset training, hypoxia training, spatial disorientation training, flight

instructor certificate, instrument flight instructor certificate, multi-engine flight instructor certificate, and training as a flight crewmember in a jet transport aircraft.

The training acquired in this program will advance the student’s knowledge and ability to serve as a professional pilot.

Enrollment in flight courses requires proof of U.S. citizenship or a Department of Justice background check for international students. Please see the Aviation Transportation and Security Act under the Admissions section of this catalog.

Certification Requirements

The Pilot Advancement Certificate results in certification as a commercial pilot with multi-engine and instrument ratings. Graduation from the program is based on the successful completion of the following Aeronautical Science ground and flight course sequence:

Course	Title	Credits
AS 109	Flight Transition Ground Course	2
AS 221	Instrument Pilot Operations	3
AS 321	Commercial Pilot Operations	3
FA 109	Intermediate Flight Transition and Procedural Familiarization	1
FA 221	Instrument Single Flight	1
FA 321	Commercial Single Flight	1
FA 323	Commercial Multi Add On	1
Total Credits		12

Students wanting to enter the Pilot Advancement Certificate Program that do not have a private pilot certificate must enroll as a regular degree seeking student in AS 119 and FA 119.

Note: 12 credit hours are the minimum number of hours required for certification completion.

Advanced Flight Training Track

This supplemental track is designed for students with appreciable flight training and/or flight experience to afford them with opportunities to advance as a professional pilot. Completion of the Professional Pilot Flight Track or equivalent experience is required to enter the Advanced Flight Training Track.

Airline Transport Pilot Certification Program

For those individuals already possessing a bachelor’s degree and a Commercial Pilot Certificate with an Airplane Multi-engine Land rating, Embry-Riddle offers a certificate program designed to deliver advanced levels of flight certification. The courses associated with this program are tailored to meet individual needs that build upon previously garnered flight experiences (e.g. military, FBO, etc.). This certificate program does not require enrollment as a full-time degree seeking student. At the successful completion of this program, the student attains an FAA Airline Transport Pilot Certificate with an Airplane Multi-engine Land rating. Further pilot advancement training is available based on individual student needs. Optional advanced flight training and/or FAA certification includes upset training, flight instructor certificate, instrument flight instructor certificate, multi-engine flight instructor certificate, and training as a flight crewmember in a jet transport aircraft.

The training acquired in this program will advance the student’s knowledge and ability to serve as a professional pilot.

Certification Requirements

Graduation from the program is based on the successful completion of the following course:

Course	Title	Credits
FA 418	Airline Transport Pilot Proficiency	1
Total Credits		1

Note: 1 credit hour is the minimum number of hours required for certification completion.

Optional Advanced Flight Training

Course	Title	Credits
FA 370	Advanced Multi-Engine Instrument Flight	1
AS 421	Flight Instructor Ground Course	4
FA 421	Flight Instructor Rating	1
FA 215	Upset Training	1
FA 460	Multi-Engine Flight Instructor Rating	2
FA 199-499	Special Topics in Flight	0-2
AS 199-399	Special Topics in Aeronautical Science 1-3	1-3

Academic Programs at the Prescott Campus

Aeronautics

Bachelor of Science

The Aeronautics degree is designed specifically for students who work, have worked, or desire to work in aviation-related careers. For students with existing aviation-related knowledge and skills, this degree acknowledges a student's valuable acquired experience through the award of advanced standing prior-learning credit. The curriculum then builds on those skills and knowledge. The program also provides an opportunity for students new to aviation to acquire aviation-specific knowledge through aviation-related coursework. This combination of a student's aviation learning, aviation courses, courses in business, computer science, economics, humanities, communications, social sciences, mathematics, and physical sciences, along with professional development elective courses and a minor course of study, will prepare graduates for a career in an aviation-related field.

Degree Requirements

The Bachelor of Science degree in Aeronautics requires successful completion of a minimum of 120 credit hours (typically 8 semesters). A minimum of 40 credit hours must be upper-level. Students are required to complete MA 111 and MA 112. Those without the mathematics proficiency needed to begin MA 111, will be enrolled in MA 106 for their initial mathematics course.

Aviation Area of Concentration

The Aviation Area of Concentration is the degree component where students can select courses from various aviation-related fields. In addition, the AOC portion of the degree is where credit for prior aviation learning is

applied. Thirty-six credit hours are needed to satisfy the requirements of this portion of the Aeronautics degree. All or part of the credit needed for this degree requirement may be awarded based on prior aviation training or experience. To complete the AOC, in addition to any prior learning credit, students may select from courses in Aeronautical Science, Flight, Air Traffic Management, Safety (aviation-related), or Applied Meteorology (aviation-related).

Evidence of Prior Aviation Learning

Applicants who qualify for admission to and matriculate in the degree program may be eligible for credit for prior learning.

Applicants must be able to prove competence in an aviation occupation with authentic documentary evidence. Training and experience in closely related occupations can be combined.

Just as official transcripts are required to transfer credit from one university to another, original or authenticated documentation of prior learning from professional training and experience must be presented to qualify for Aviation Area of Concentration credit. Documentary evidence must be from objective third-party sources and clearly describe the applicant's professional training, duties, and achievements in detail. Advanced standing credit will be awarded in accordance with the applicable Embry-Riddle Curriculum Manual.

Duplicate Credit

Many Embry-Riddle courses are designed to teach the same skills and knowledge that

Academic Programs at the Prescott Campus

Aeronautics students have acquired through experience and training. Students who complete courses in the same aviation specialty for which they were granted Aviation Area of Concentration credit would be duplicating coverage of the same subject matter. Credit for completion of such courses will not be applied to degree requirements.

Credit for prior learning granted in the Aeronautics degree program is not transferable to any other Embry-Riddle degree program.

Minor

Students must select and complete one minor field of study. Total credits within the minor will vary depending on which minor is chosen. Students typically select a minor that will enhance their aviation career. Courses required for the minor field of study may be used to fill Area of Concentration, Professional Development, or Open Elective degree requirements. See Minor Courses of Study in this catalog.

Bachelor of Science in Aeronautics

The curriculum to be followed by each student will vary depending on any AOC prior learning or transfer credits granted.

Aviation Area of Concentration (36)

Students must complete 36 credits of advanced standing and/or non-duplicating credit from AEL/AMT/AS/AT/FA/FH/SF/SP/WX courses.

General Education (37)

COM	Communication Theory and Skills*	9

Open Electives - Complete 14 credits.

TOTAL DEGREE CREDITS	120
----------------------	-----

*Embry-Riddle courses in the general education categories of Communication Theory and Skills, Humanities, and Social Sciences may be chosen from those listed below, assuming prerequisite requirements are met. Courses from other institutions are acceptable if they fall into these broad categories and are at the level specified in the Aeronautics vertical outline. Other courses may also be used with permission of the undergraduate program coordinator.

Communication Theory and Skills
COM 122, 219, 221 or 222

Humanities
HU 140 to HU 146

Social Sciences
LOWER-LEVEL:
100-200 level
UPPER-LEVEL:
300-400 level, PSY 350

Dependent on the amount of upper-level Aviation Area of Concentration credit applied, some of the open or Communications/Humanities/Social Sciences electives in the B.S. degree may have to be 300-400 level courses to satisfy the graduation requirement of 40 credits of upper-level courses.

Cooperative Education credits may be used as open electives; however, assignments may not be in the student's occupational specialty.

Students need to ascertain Mathematics and Physical Sciences pre/corequisites that are required for other courses. For example, PS 113/4 and MA 112 are required for many upper-division AS and WX courses.

Academic Programs at the Prescott Campus

Air Traffic Management

Bachelor of Science

The Air Traffic Management (ATM) program is a degree designed for students whose goal is to become an air traffic controller or seek employment in a related industry. In addition to ATM courses, the curriculum provides skills in mathematics, physics, communications, safety, meteorology and aeronautics. The academic courses are designed to provide exposure to procedures and operations consistent with those found in Federal Aviation Administration (FAA) air traffic control facilities.

Degree Requirements

The Bachelor of Science degree in Air Traffic Management requires successful completion of a minimum of 120 semester hours, normally completed in eight semesters. A minimum of 40 semester hours must be upper-level. Students are required to complete MA 111 and MA 112. Those without the mathematics proficiency needed to begin MA 111, will be enrolled in MA 106 for their initial mathematics course.

Minor

Students must select and complete one minor field of study, as approved by the Aeronautical Science Department. Total credits within the minor will vary depending on which minor is chosen. Students typically select a minor that will enhance their aviation career. See Minor Courses of Study in this catalog.

Suggested Program of Study

Students should be aware that several courses in each academic year might have prerequisites and/or corequisites. Please check the course descriptions in this catalog before registering for classes to ensure requisite sequencing.

* Embry-Riddle courses in the general education categories of Communication Theory and Skills, Computer Science, Humanities, Social Sciences, Mathematics, and Physical Science may be chosen from those listed below, assuming prerequisite requirements are met. Courses from other institutions are acceptable if they fall into these broad categories and are at the level specified in the Air Traffic Management vertical outline.

Communication Theory and Skills:

COM: 122, 219, 221 or 222

Humanities or Social Sciences:

Lower-Level: Any 100-200 level
Upper-Level: Any 300-400 level

Physical Science:

PS: 101, 102, 113, 114, 105, 107, 140

Mathematics

MA: 140, 142, 145, 241

*UNIV 101 meets open elective or credit in excess of degree requirement

** Open Elective credits required will be calculated, based upon selection of the minor, to complete the minimum of 120 credits requirement for the degree. A student MUST ALSO complete a minimum of 40 credit hours of upper-level courses. Open elective courses can count toward this total.

Students enrolled in the Army, or Air Force ROTC programs may substitute MSL or AF courses for open elective courses.

Air traffic controllers are required to possess a current FAA 2nd Class or higher medical certificate to receive and exercise the privileges of their FAA Air Traffic Controller certificates. Students should verify their eligibility status for this level medical certificate with an FAA designated medical examiner prior to enrolling in this degree program. The medical certificate is not required for ATM courses or degree enrollment.

Prospective air traffic controllers must be able to complete their university education and have entered the FAA Air Traffic Control Academy prior to reaching their 31st birthday.

FAA air traffic controllers must be U.S. citizens.

Academic Programs at the Prescott Campus

Applied Meteorology

Bachelor of Science

The Bachelor of Science degree in Applied Meteorology provides a practical understanding of the physics and dynamics of the atmosphere and prepares the graduate for a range of meteorologist positions in government or industry. Students use a state-of-the-art Weather Center and computer-equipped classrooms to understand and forecast complex atmospheric phenomena ranging from severe thunderstorms and tornadoes, to cyclones, fronts, and jet streams, to global climate and how it is changing. Emphasis is placed on applying theory to operational weather forecasting and decision making for weather-sensitive industries, including possible hands-on experience as a meteorology intern. The program prepares graduating students for careers as meteorologists with the government, military, television, or the private sector, as dispatchers or for graduate studies toward a career in research or academia. All areas of concentration meet all the requirements for undergraduate study in meteorology recommended by the American Meteorological Society, the National Weather Service, and the U.S. Air Force. All graduates also meet U.S. Office of Personnel Management Qualification Standards for the position of meteorologist.

Degree Requirements

The Bachelor of Science degree in Applied Meteorology requires successful completion of a minimum of 120 credit hours and can be attained in eight semesters, as outlined below. Students must complete both general education courses and Applied Meteorology courses in order to graduate with a Bachelor of

Science in Applied Meteorology. All students entering the Applied Meteorology program should have completed four years of high school science and mathematics. Proficiency in trigonometry and pre-calculus is essential to enter this program. Students should be prepared to enter Calculus I in their first semester.

Students should be aware that several courses in each academic year may have pre- or corequisites. Check the course descriptions at the back of this catalog before registering for classes to ensure that these requirements are met. In particular, many courses have math prerequisites or corequisites. Students should plan to begin the required math-calculus sequence as soon as they are eligible. Notice that students completing the Research AOC will be eligible to declare a Minor in Mathematics. Others may add MA 441 or a similar upper-level math class to become eligible for the math minor.

In addition, most meteorology (WX) courses are offered only **once a year**. These are indicated in the schedules below. Failure to adhere to the separate Fall and Spring plans will result in graduation being delayed by one year.

There are four areas of concentration. The Research Area of Concentration is for non-flying, non-military students. The Meteorology with Flying area of concentration is for non-military students who wish to complete 14 credit hours of airplane (or helicopter) flying and ground schools while earning the Applied Meteorology degree. The Military Meteorologist area of concentration is for the ROTC student. The Meteorology for Aviation

Academic Programs at the Prescott Campus

Operations Area of Concentration will train students for jobs as flight dispatchers. This area of concentration requires several additional classes, most of which can be fulfilled using open elective slots. The area of concentration must be declared at the time of enrollment or during the first semester.

The courses necessary to earn the degree are listed below.

Note: Many meteorology courses are only offered once per academic year.

Safety Science

Bachelor of Science

The Bachelor of Science degree in Safety Science provides the student with skills and knowledge for a career in Aviation Safety or Occupational Safety and Health and is normally completed in eight semesters. The program delivers an effective foundation in safety that prepares the student for any industrial setting and allows each student to select an Aviation Safety or Occupational Safety and Health area of concentration (AOC).

In the Aviation Safety AOC, for those students who are planning to enter the aviation accident investigation industry, it is highly recommended that the student obtain his/her private pilot's license. ERAU offers flight training for these students (flight fees apply). Those students taking flight training in preparation for their private pilot's license will take AS 119, Private Pilot Operations (the ground school course in conjunction with flight training). Students not getting their pilot's license will take AS 120, Principles of Aeronautical Science.

The Department of Safety Science is located in the Robertson Aviation Safety Center where classrooms, laboratories, and faculty offices are convenient for daily interaction with other students and faculty. The Department of Safety Science provides a unique opportunity on the Prescott campus for students to interact with graduate students since it is the only department offering a Master's degree.

The Bachelor of Science degree in Safety Science is designed to provide the student the following expertise:

- Familiarity with the fundamentals of the

ancillary disciplines that are essential to the practice of safety: aviation safety, occupational safety, industrial hygiene, ergonomics/human factors, and quantitative methods

- Ability to understand research processes, techniques and procedures and to draw appropriate conclusions from the analysis of both quantitative and qualitative data
- Knowledge of the basic approaches to accident investigation
- Understanding of the breadth of application of the discipline of safety science, including ground and occupational safety as well as product safety, aviation safety, flight safety, and air crash investigation
- Use appropriate tools for the analysis of safety data to draw inferences about cause, effect, and prevention

Degree Requirements

The successful completion of the Bachelor of Science in Safety Science requires a minimum of 120-121 credit hours, depending upon the Area of Concentration (AOC) chosen. Students will complete a general education core of 25 credit hours and a math and science core of 26 credit hours. Each Safety Science major will complete a safety core of 27 credit hours. The student can choose either Aviation Safety or Occupational Safety and Health as an AOC. Each of these areas of concentration will require 24-31 credit hours. One minor must be completed to meet the degree requirements.

*Univ 101 meets open elective or credit in excess of degree requirement.

Accelerated Program in Safety Science

Bachelor of Science/Master of Science

This is a five-year program that allows very well-qualified students to complete both a Bachelor of Science and a Master of Science in Safety Science. The five-year program offers upper-level undergraduates in the major the chance to begin their graduate work while completing their bachelor's degree program. This program is available only at the Prescott Campus through the Department of Safety Science.

In the Aviation Safety AOC, for those students who are planning to enter the aviation accident investigation industry, it is highly recommended that the student obtain his/her private pilot's license. ERAU offers flight training for these students (flight fees apply). Those students taking flight training in preparation for their private pilot's license will take AS 119, Private Pilot Operations (the ground school course in conjunction with flight training). Students not getting their pilot's license will take AS 120, Principles of Aeronautical Science.

The objective of this five-year program is to produce safety professionals with the following skill set:

- Familiarity with the fundamentals of the ancillary disciplines that are essential to the practice of safety: aviation safety, occupational safety, industrial hygiene, ergonomics/human factors, and quantitative methods
- Ability to understand research processes, techniques and procedures and to draw appropriate conclusions from the analysis of both quantitative and qualitative data
- Knowledge of the basic approaches to

accident investigation

- An understanding of the breadth of application of the discipline of safety science, including ground and occupational safety as well as product safety, aviation safety, flight safety, and air crash investigation
- Ability to use appropriate tools for the analysis of safety data to draw inferences about cause, effect, and prevention.

Degree Requirements

Students enrolled in this program must meet the following requirements:

- Maintain a cumulative GPA of 3.0 throughout the academic program
- Maintain a cumulative GPA of 3.0 for all graduate courses
- Complete a total of 150 credits hours, including an Area of Concentration (AOC). There will be 120 credit hours required for the completion of the BSSS and 30 additional credit hours of graduate requirements for completion of the MSSS. A minor is required for the Occupational Safety and Health Area of Concentration (AOC)

Application Process

Applications may be submitted to the Chair of the Department of Safety Science for the five-year BS/MS in Safety Science program after the completion of a minimum of 45 credits with a CGPA of 3.00. A well-defined process will be used to determine whether a student is

Academic Programs at the Prescott Campus

fully qualified for admission into the program. Criteria for making this judgment will include academic record, work experience, professional activities, publications, recommendations, written statements, and interviews, as appropriate. Applications will be reviewed and the student notified of their acceptance into the program after successful completion of 60 credit hours with a CGPA of 3.00.

Master of Science in Safety Science

Introduction

The Master of Science in Safety Science (MSSS) degree program is designed to provide students with a practical course of study in occupational health and safety and aviation safety. The degree program produces safety professionals who are skilled in providing safety management expertise in a variety of industries. Graduates will be able to provide leadership and guidance in compliance issues involving EPA, OSHA, DOD, FAA, DOE, NTSB and state health, hygiene, and workplace standards, and will be prepared for service in numerous industries, including but not limited to the aviation/aerospace industry and the military.

The MSSS degree prepares graduates for professional safety positions in a variety of industrial settings including aviation. Students will qualify for jobs such as aircraft accident investigator, aviation or general safety management, operations safety, and safety design. The degree offers the opportunity for students to explore both the theoretical and pragmatic discipline that occupational health and safety has become. Particularly in light of extensive interest by the private sector and by government entities, this degree offers occupational health and safety professionals the advanced education and credentials necessary to succeed in the practice of safety.

The MSSS is a 36 credit hour program of study composed of a General Core (15 credit hours), a Research Core (9 to 12 credit hours), and electives (9 to 12 credit hours). Elective coursework must be selected from the elective list on the following page. All elective courses may not be offered every year. **Check with an**

advisor for a schedule of course offerings.

Preference will be given to applicants with an undergraduate background in college-level mathematics (including algebra and trigonometry), the physical and natural sciences, computer applications, behavioral science, and statistics. Students who lack prerequisite knowledge in chemistry will be required to take deficiency coursework. The prerequisite knowledge for any graduate course must be satisfied before enrollment in the course is permitted.

Graduate Assistantships

Graduate assistantships are academic appointments that are normally reserved for qualified graduate students. Graduate assistants may be involved in research activities under the direction of a faculty member or may assist with administrative duties. To be eligible for a graduate assistantship, a student must have full graduate status in a degree program, must have maintained a CGPA of 3.00 out of a possible 4.00 or above through the end of the semester (graduate or undergraduate) preceding the appointment, and must demonstrate adequate communication and technical skills.

Each department has the responsibility to post the availability of its graduate assistantships. Students interested in applying should submit an application form and a 500-word essay directly to the department. Incoming students should contact departments directly about the availability of assistantships.

Full graduate assistantships carry a stipend set by the University and a tuition waiver. Graduate assistants with such appointments are expected to devote up to 20 hours each week to effectively carry out their assignments. Under some circumstances, partial assistantships providing either tuition or a stipend may be granted. Expected time to be devoted is set by the assigning department. Graduate assistants are permitted to accept other University employment; however, University policies limit all students to a total of 25 hours of work per week, including the graduate assistantship. All graduate research and administrative assistantships, both full and partial, require that the recipient be registered for at least three graduate credits at Embry-Riddle for any semester of their appointment. Summer registration is not required, but encouraged.

Graduate Internships

Graduate internships are temporary professional or industrial work opportunities available to graduate students. There are two types of internships: resident and nonresident. Resident internships are professional work activities supported by a partnership between the University and industry and conducted on campus under the supervision of a faculty/staff sponsor. Nonresident internships are professional work activities conducted off campus at the supporting organization facility. Full-time employees of the offering organization are not eligible for an internship appointment and cannot receive elective credit for their professional work service.

Graduate students who have full graduate status, are in good standing, with a minimum of six completed graduate credit hours, and who earn a cumulative GPA of 3.00 on a 4.00 basis, are eligible to apply for graduate intern-

ships. Students must demonstrate adequate communication and technical skills.

Students selected for an internship must register for the approved number of credit hours in the departmental internship course and pay all fees. Graduate academic credit is awarded at a rate of one credit hour for every 200 clock hours of work completed, up to a maximum of three credit hours in one semester. Three internship credit hours may be applied as an elective toward degree requirements. Students are advised to consult with their Safety Science graduate program coordinator for approval to use internship credits toward their degree program.

Guidelines for Graduate Research Projects and Theses

Introduction

The graduate program in the Department of Safety Science offers the degree of Master of Science in Safety Science (MSSS), which is a 36 credit-hour program. In addition to course work, this degree requires the completion of a research project, either a three-hour Graduate Research Project (GRP, with 33 hours of course work) or a six-hour Master's Thesis (with 30 hours of course work). Those students who are planning to do a GRP should have registered for a total of three hours of MSF 690 before graduation. Those planning to do a thesis should register for six hours of MSF 700 before graduation. The detailed information in this section is intended to assist graduate students in the completion of this research requirement.

The Difference between a GRP and a Thesis

The difference between a GRP and a thesis is primarily a question of scope, but there are other distinguishing features.

If the student has any aspirations to later pursue a doctorate, a thesis should be considered, since this is good preparation for writing a dissertation. A thesis is a project that requires the collection and analysis of data in an original fashion. This work should be suitable for submission to a peer-reviewed journal for publication.

In contrast, a GRP does not necessarily involve original work in the form of collection and analysis of data. If it does, it will be on a scale smaller than a thesis. A GRP may also consist of the results of an internship, such as the design of a safety program for a specific industry or a report developed from a hazard analysis. Both of these examples are appropriate GRP topics, but are not appropriate for a thesis.

Steps in the Completion of the Research Requirement

1. **IDEA:** Generate ideas for research in consultation with the graduate faculty. This will allow the student to arrive at an idea that is consistent with the curriculum of the MSSS program and is of genuine interest to the student.
2. **COMMITTEE SELECTION:** Choose a committee of three people. This committee must consist of two members of the MSSS graduate faculty, one of whom must chair the committee. The third member may be anyone from the faculty or from outside the University who can contribute to the project (MSSS students are not eligible). For instance, if you are writing a safety program plan in consultation with an outside corporate entity, the third member could be a representative from that entity.

Academic Programs at the Prescott Campus

3. **PROPOSAL:** Write a proposal and have this proposal approved by all members of the committee. The proposal need not be more than a few pages (3-5). The proposal must consist of: an introduction, a clear problem statement (probably an hypothesis, but not necessarily), an outline of the methods to be used, and a preliminary list of sources. The format for the proposal should conform to the APA Guide. Note that a faculty member may remove him or herself from the committee at this (or any) stage of the process. If this happens, the student must then choose an alternate member. A copy of the proposal signed by the entire committee should be placed on file with the Graduate Admissions Coordinator.
4. **HUMAN SUBJECTS:** For all projects that require the use of human subjects, the student must submit an approval form through the University's Institutional Review Board (IRB). Forms for this process are available through the Sponsored Programs Pre-Award Office at Daytona Beach. It should be noted that almost all research conducted in the Department of Safety Science will require the submission of these forms. If there is any question, the student should consult his or her committee.
5. **RESEARCH:** The research should be conducted in close consultation with the committee. If the committee is not consulted on a regular basis through this process, the chance of approval of the final product diminishes.
6. **DOCUMENT PREPARATION:** Writing the GRP or thesis should not be started until the student's committee has given approval. The process of writing should begin no later than the beginning of the semester of anticipated graduation and no later. As the committee approves each section, the student may move on to the next section so that it may be approved by the committee. Even if the student begins submitting sections at the beginning of the semester of graduation, this will not guarantee that the committee will approve the final document by the end of the semester. The student should begin this process as early as possible. Despite when the student begins this process, the committee cannot guarantee that the process will be finished, so students should make plans accordingly. The student will be allowed to finish when and only when the committee has been satisfied and the committee has approved and signed the "approval" sheet after the GRP presentation. Also note that summers are allocated for the purpose of completing research.
7. **FINAL DEFENSE:** Once the final document is prepared and approved in its final form by the committee, the oral defense will be scheduled. The student is responsible for arriving at a mutually agreeable time with the committee, and issuing invitations to the graduate faculty, the administration of the College of Aviation, the deans of the Colleges of Arts and Sciences and Engineering, and the entire graduate student body. Again, note that this is the student's responsibility. Be aware that this is a time-consuming process and allow sufficient time. The final defense of the GRP or thesis will require a formal presentation using PowerPoint or other presentation software; this presentation will be limited to 30 minutes, with another 15 minutes allowed for questions from the committee and the audience. After the defense, the student's committee will advise the student whether

he or she has passed and what revisions are necessary. At this point the committee will decide whether to sign the signatory page.

8. **COMPLETION:** Finally, the student must complete all necessary paperwork for graduation (assuming that all coursework has been completed as well). For the GRP, a copy must be provided to the department. For the thesis, bound copies must be provided for the library and the Graduate Admissions Coordinator. Copies of either the GRP or thesis may be provided to other recipient(s) as deemed appropriate by the student.
9. **ENROLLMENT:** Once a student has enrolled for 3 hours of GRP (MSF 690) or 6 hours of thesis (MSF 700) credit, the student must continuously enroll for 1 credit of GRP or Thesis. This policy is outlined in detail in the Graduate Research Project Grading and the Thesis Grading sections of the University catalog.

Deadlines for GRP and Thesis Preparation

Each semester the department establishes and posts the deadlines for committee organization, proposal submission, completion of the first three chapters of the GRP/thesis, the defense confirmation, delivery of the GRP/thesis to the committee, and the final defense.

College of Engineering

Dr. Ronald A. Madler, Dean

The College of Engineering offers four complementary programs, all focused on the aerospace industry. Aerospace, Computer, Electrical and Mechanical engineers often are the primary team members in the design, analysis, or refurbishment of aircraft, spacecraft, missiles, rockets, and the ground-based systems that support their operations. The strength of the college is built on this combination of disciplines focused on aerospace platforms.

Aerospace Engineering concentrates its efforts on aircraft and spacecraft systems including structures, aerodynamics, flight mechanics, performance and control.

Computer Engineering focuses on the design and development associated with computer hardware, including chips and circuits, and with the analysis, design, and development of mission-critical software systems employed in these devices.

Electrical Engineering focuses on electrical systems, controls, and communications.

Mechanical Engineering focuses on propulsion, robotics and energy with an emphasis on jet aircraft engines, autonomous vehicles such as Unmanned Aerial Vehicles (UAVs) and Planetary Rovers and renewable energy sources such as solar and wind.

The philosophy of our college is to give students a broad background, enabling them to pursue careers in many technical areas, but we choose to use aerospace as our vehicle to demonstrate the exciting, creative, and technical aspects of these

engineering disciplines.

With this in mind, our mission is to provide undergraduate education founded on a rigorous, applied treatment of engineering fundamentals coupled with modern engineering tools.

We are dedicated to providing excellence in aviation and space education, based in aerospace, computer, electrical, and mechanical engineering, demonstrated through quality teaching, scholarly activity, facilities, and curriculum. Our engineering programs are recognized for their strong emphasis and rigor in engineering science and design founded on hands-on laboratory-based education. The college's vision is to contribute well-prepared professionals for early success in the industry or in graduate school. Our faculty is dedicated to educating engineers for the 21st century.

The College of Engineering embraces the philosophies of the Accreditation Board of Engineering and Technology (ABET). We have established objectives for our alumni to prepare them for a productive and rewarding career.

Along with these objectives we have established outcomes we expect from our students as they progress through graduation. Those outcomes are listed below:

1. Our graduating students will have experienced a core of humanities, social sciences, and communications and demonstrate the use of this core to enhance the technical content of their engineering curriculum.

Academic Programs at the Prescott Campus

2. Graduating seniors will be competent in fundamental math and basic science subjects.
 3. All graduating engineering students will be competent in a subgroup of core engineering fundamentals appropriate to their discipline.
 4. Engineering students graduating from our programs will demonstrate proficiency in core topics in their program listed below:
 - a. **Aerospace Engineering (Aeronautics Option)**
Aerodynamics, Thermal Sciences, Structures, Flight Mechanics, Propulsion, Electronics, Aerospace Materials, Astronautics, and Aircraft Design
 - b. **Aerospace Engineering (Astronautics Option)**
Astrodynamics, Attitude Dynamics and Control, Structures, Rocket Propulsion, Thermal Sciences, Aeronautics, Space Systems, Space Environment Effects, Aerospace Materials, and Spacecraft Design
 - c. **Electrical Engineering**
Analog/Digital Circuits, Electronic Devices, Controls, Electromagnetics, Power Conversion, Telecommunications, Hardware and Software Systems, and Design
 - d. **Computer Engineering**
Electrical Circuits, Electronics, Controls, Logic Circuits, Computer Architecture, Computer Operating Systems, Algorithms and Data Structures, and Design
 - e. **Mechanical Engineering**
Thermal Sciences, Mechanisms, Robotics, Air Breathing Propulsion, Energy, Electronics, Machine Design, Aerospace Materials, Controls, Vibrations, and Design
 5. Graduating students will have had the opportunity to specialize and demonstrate competence in a subdiscipline in their chosen field, to provide depth in a subject area or prepare them for graduate education.
 6. All engineering students will be proficient in engineering design.
 7. All engineering students will demonstrate design competence through a major design (capstone) experience focused on designing a project, device, system, or process incorporating engineering standards and realistic constraints.
 8. All engineering students will be proficient in modern laboratory techniques and state-of-the-art computer technology.
- The Aerospace Engineering, Electrical Engineering, Computer Engineering and Mechanical Engineering programs are accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.
- It is the goal of the College of Engineering that normal incoming freshmen be able to complete their baccalaureate studies in four years. Depending on preparation and the time committed to classes, students may be able to graduate more quickly than that or it may take them longer. The nominal four-year program assumes that students arrive here having mastered trigonometry, two years of algebra, and one year of high school physics.

Academic Programs at the Prescott Campus

Because communication skills are vital to all modern engineering disciplines, entering students should have a strong background in English composition.

The College of Engineering is proud of its programs. Industry praises the quality of our graduates, and graduate schools welcome our students. The following sections provide specific information on each degree

program. Details on the content and emphasis of the degree and the degree requirements are shown. Please remember that questions regarding the degree programs are always welcome. Please feel free to contact the Admissions office, the College of Engineering, or the individual departments directly.

Aerospace Engineering

Bachelor of Science

The Bachelor of Science in Aerospace Engineering provides a broad exposure to engineering fundamentals and prepares the graduating student for a wide range of engineering positions in industry or government. The program also is an excellent preparation for graduate school in a number of disciplines. The program's focus is primarily on the engineering of mission-oriented vehicles for atmospheric and space flight. In addition to the general education requirements, the student will study aerodynamics, structures, propulsion, space systems, controls, materials, instrumentation, electrical fundamentals, computer applications, orbital mechanics, and design. Students choose to integrate their knowledge in either an aircraft or spacecraft capstone design project. Design projects in a number of courses will develop and refine the students' ability to integrate their knowledge, communicate both verbally and in writing, and work in a team environment. A large number of hands-on experiences will expose the student to practical engineering to balance the theoretical analysis required to understand aircraft and spacecraft systems.

The overall objective of the Aerospace Engineering program at Prescott is to produce graduates who will be successful practitioners of aerospace engineering. The program objectives to measure our accomplishment of this goal are engineers who:

- Demonstrate achievements in their chosen profession
- Contribute to the development of the profession

- Engage in professional growth
- Contribute to the welfare of society through service

The Aerospace Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

Degree Requirements

The Bachelor of Science in Aerospace Engineering program requires successful completion of a minimum of 129 credit hours. The program may be completed in eight semesters assuming appropriate background and full-time enrollment. A minimum cumulative grade point average of 2.00 is needed for all required AE, EGR, EP, and ES courses, excluding technical electives. The courses necessary to earn this degree are listed below.

Students should be aware that many courses have prerequisites and/or corequisites. Check the course descriptions at the back of this catalog before registering for classes to ensure required sequencing. Students should note that a grade of C or better is required in MA 241, MA 242, and PS 150 for entry into ES courses and also PS 160 for entry into AE courses.

PS: 303, 321, 322, 350, 375, 420
SE: 300

^{††} Must be approved by the Aerospace Engineering Department before taking this course.

Three credit hours of technical elective credit must be taken from available upper-level College of Engineering courses not specifically listed in the student's degree requirements. The remaining three credit hours must be selected from the list above or an upper-level ROTC course may be substituted.

General Education Electives

* Embry-Riddle courses in the general education categories of Humanities, Mathematics, and Social Sciences may be chosen as specified below, assuming prerequisite requirements are met. Courses from other institutions are acceptable if they fall into these broad categories and are at the level specified above in the Aerospace Engineering vertical outline.

Humanities

LOWER-LEVEL:

Any HU/L course under 300 level.

UPPER-LEVEL:

HU 330 or HU 399/SS 399 - Study Abroad

Social Sciences

LOWER-LEVEL:

Any EC/SS/PSY/RS course under 300 level.

Mathematics

UPPER-LEVEL:

MA 412, MA 432, MA 441, or MA 443 or as approved by the chair of Aerospace Engineering.

Prior approval by the Aerospace Engineering Department chair is required for any substitutions for general education electives.

** UNIV 101 is taken in excess of degree requirements or meets open elective credit.

*** EE 223/224 may be substituted for EE 335/336.

Academic Programs at the Prescott Campus

Computer Engineering

Bachelor of Science

The Bachelor of Science in Computer Engineering provides the student with the opportunity to acquire a broad background in computing, programming languages, circuit theory, computer design, telecommunication systems, embedded control systems, real-time systems, and software engineering. The curriculum includes courses in general education, computer science, software engineering, electrical engineering, and the capstone sequence of senior design classes.

This added emphasis on real-time embedded control systems and hardware/software interfaces places the Computer Engineering program in a unique position to increase employment opportunities after graduation. In addition, the program includes significant project work that is designed to prepare students to work as part of a team on the development of complex systems including both software and hardware. It allows the student opportunities to build capabilities in teamwork, designing to requirements, and quality assurance techniques.

The overall objective of the Computer Engineering program at Prescott is to produce graduates who will be successful practitioners of computer engineering. The program objectives to measure our accomplishment of this goal are engineers who:

- Demonstrate achievements in their chosen profession
- Contribute to the development of the profession

- Engage in professional growth
- Contribute to the welfare of society through service

The Computer Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

Degree Requirements

The Bachelor of Science in Computer Engineering can be earned in eight semesters assuming appropriate background and full-time enrollment. Successful completion of a minimum of 127 credit hours is required.

Students should be aware that several courses in each academic year may have prerequisites and/or corequisites. Check the course descriptions at the back of this catalog before registering for classes to ensure requisite sequencing. The B.S. degree requires that students have a minimum cumulative grade point average of 2.00 in all CEC, EE, SE, CS, and EGR courses that fulfill any degree requirement. The Computer Engineering degree includes a space option in which EP 394, AE 427, and AE 445 substitute for a technical elective, CEC 420, and CEC 421.

* Embry-Riddle courses in the general education categories of Humanities and Social Sciences may be chosen from those listed below, assuming prerequisite requirements are met. Courses from other institutions are acceptable if they fall into these broad categories and are at the level specified above in the Computer Engineering vertical outline.

Humanities

LOWER -LEVEL:

Any course in the HU/L series under 300 level.

UPPER-LEVEL:

Any course in the HU/L series equal to or above 300 level.

Social Sciences

LOWER-LEVEL:

Any SS/EC/PSY/RS course under 300 level.

UPPER-LEVEL:

Any SS or EC course equal to or above 300 level, or PSY 350.

SIS and RS courses may be substituted for Humanities and Social Sciences at the appropriate levels.

** Technical electives include any AE, CE, CS, EE, ES, MA, or PS course above the 300 level or other courses approved by the CE department chair.

***UNIV 101 is taken in excess of degree requirements or meets open elective credit.

The Computer Engineering degree includes a space option in which AE 427 and AE 445 substitute for CEC 420 and CEC 421 and EP 394 is taken as one of the technical electives.

Academic Programs at the Prescott Campus

Electrical Engineering

Bachelor of Science

The Bachelor of Science in Electrical Engineering provides the student with the opportunity to acquire a broad background in circuit theory, communication systems, computers, control systems, electromagnetic fields, energy sources and systems, and electronic devices. The student also gains specialization in avionics appropriate for entry-level engineering positions in the aerospace industry. Emphasis on design places the Embry-Riddle Electrical Engineering student in a unique position to increase employment opportunities after graduation.

The overall objective of the Electrical Engineering program at Prescott is to produce graduates who will be successful practitioners of electrical engineering. The program objectives to measure our accomplishment of this goal are engineers who:

- Demonstrate achievements in their chosen profession
- Contribute to the development of the profession
- Engage in professional growth
- Contribute to the welfare of society through service

The Electrical Engineering program is accredited by the Engineering Accreditation Commission of ABET, <http://www.abet.org>.

Embry-Riddle courses in the general education categories of Humanities and Social Sciences may be chosen as directed below, assuming prerequisite requirements are met. Courses from other institutions are acceptable if they fall into these broad categories and are at the level specified above in the Electrical Engineering vertical outline.

Humanities

LOWER-LEVEL:

Any HU/L course under 300 level.

UPPER-LEVEL:

Any HU/L course equal to or above 300 level.

Social Sciences

LOWER-LEVEL:

Any SS/EC/PSY/RS course under 300 level.

UPPER-LEVEL:

Any SS or EC course equal to or above 300 level, PSY 350.

SIS and RS courses may be substituted for Humanities and Social Sciences courses at the appropriate level.

** Advanced/technical electives are selected from a list provided by the department chair.

***UNIV 101 is taken in excess of degree requirements.

Core ES selection is selected from ES 206, 299, 306, 307, 399, 409, 413, 499, or AE 412, EGR 200, or EP 394.

++ Specified elective is any AE, AF, CE, CS, EE, ES, MA, MSL, PS course above 300 level, or as approved by department chair and not otherwise taken for the EE degree. Only one three-credit specified elective may come from AF or MSL.

The Electrical Engineering degree includes a space option in which EP 394, AE 427, and AE 445 substitute for the ES elective, EE 420, and EE 421.

Academic Programs at the Prescott Campus

Mechanical Engineering

Bachelor of Science

Mechanical Engineering became a degree offering in Fall 2007. When designing this degree program our faculty wanted to ensure that we created a Mechanical Engineering degree that embraced Embry-Riddle's mission and recognized expertise in aerospace. Aerospace platforms, whether atmosphere or space based, require skills from a team of engineers that include Aerospace, Electrical, Computer, and, of course, Mechanical Engineering. Given this, our ME degree stays within that focus of the aerospace platform with the three primary options of robotics, propulsion and energy.

The freshman year in Mechanical Engineering is common to the Aerospace Engineering degree program. The second year in Mechanical Engineering builds fundamental skills in math and physics while introducing students to Engineering Mechanics and the Thermal Sciences. During the second semester of their sophomore year, Mechanical Engineering students in Embry-Riddle's program in Prescott will start taking courses aligned within the focus areas of robotics, propulsion or energy. The robotics option emphasizes the design and analysis of autonomous vehicles that include uninhabited aerial vehicles (UAVs), autonomous space vehicles, and planetary rovers. The propulsion option emphasizes the thermal sciences and design and analysis of turbomachinery. Jet aircraft engines are the primary area of depth but piston and rocket propulsion are also studied. The energy option emphasizes the design of renewable energy systems. During the senior year, students will gain additional depth in

their options and take capstone courses in designing an aerospace platform.

Aerospace platforms are designed in teams and with that we provide interdisciplinary opportunities centered around our ME students. Senior ME students have the opportunity to choose between five capstone sequences as a culminating event focused on teams, integration, and synthesis of four years of education. Mechanical engineers can choose capstones sequences that include:

- Robotics sequence centered on UAVs and rovers
- Astronautics sequence centered on spacecraft
- Aeronautics sequence centered on aircraft
- Propulsion sequence centered on jet aircraft engines.
- Energy sequence centered on alternative energy systems

The overall objective of the Mechanical Engineering program at Prescott is to produce graduates who will be successful practitioners of mechanical engineering. The program objectives to measure our accomplishment of this goal are engineers who:

- Demonstrate achievements in their chosen profession
- Contribute to the development of the profession
- Engage in professional growth
- Contribute to the welfare of society through service

Capstone Design Sequence, Preliminary and Detail Design

ME students have five possible sequences for their capstone sequence:

Astronautics

Students taking the Spacecraft capstone sequence are required to take:

Course	Title	Credits
AE 427	Spacecraft Preliminary Design	4
AE 445	Spacecraft Detail Design	4

Aeronautics

Students taking the Aircraft capstone sequence are required to take:

Course	Title	Credits
AE 420	Aircraft Preliminary Design	4
AE 421	Aircraft Detail Design	4

Energy

Students taking the Energy capstone sequence are required to take:

Course	Title	Credits
ME 435	Energy Engineering Preliminary Design	4
ME 440	Energy Engineering Detail Design	4

Academic Programs at the Prescott Campus

Propulsion

Students taking the Propulsion capstone sequence are required to take:

Course	Title	Credits
ME 429	Propulsion System Preliminary Design . . .	4
ME 431	Propulsion System Detail Design.	4

Robotics

Students taking the Robotics capstone sequence are required to take:

Course	Title	Credits
ME 407	Preliminary Design of Robotic Systems . .	4
ME 420	Detail Design of Robotic Systems with Laboratory	4

Technical Electives:

- AE: Upper-level, except 399^{††}, 499^{††}
- CEAE, CEME: With prior approval of the Mechanical Engineering Department
- CEC: Upper level, except 399^{††}, 499^{††}
- CS: 325, 335, 350, 420
- EE: Upper level , except 399^{††}, 499^{††}

- ME: Upper-level, except 399^{††}, 499^{††}
- PS: 303, 321, 322, 350, 375, 420
- SE: 300

†† Must be approved by the Aerospace Engineering Department before taking this course.

Three credit hours of technical elective credit must be taken from available upper-level College of Engineering courses not specifically listed in the student's degree requirements. The remaining two credit hours must be selected from the list above or an upper-level ROTC course may be substituted.

General Education Electives

* Embry-Riddle courses in the general education categories of Humanities and Social Sciences may be chosen as specified below, assuming prerequisite requirements are met. Courses from other institutions are acceptable if they fall into these broad categories and are at the level specified above in the Mechanical Engineering vertical outline.

Humanities

- LOWER-LEVEL:**
Any HU/L course under 300 level.
- UPPER-LEVEL:**
HU 330 or HU 399/SS 399 - Study Abroad

Social Sciences

- LOWER-LEVEL:**
Any EC/SS/PSY/RS course under 300 level.

Prior approval by the Mechanical Engineering Department chair is required for any substitutions for general education electives.

**UNIV 101 is taken in excess of degree requirements.

*** EE 223/224 may be substituted for EE 335/336.

MINOR COURSES OF STUDY

Minor courses of study are academic programs designed to satisfy a student's personal interests and to meet their professional needs. Students explore, in some depth, the offerings in a field of study. A minor provides the student with significant experience in a discipline organized around skills, methodology, and subject matter. To gain the greatest value from their academic experiences, students are encouraged to select minors that complement their degree program and/or other minors they are pursuing. Designed to include a minimum number of required courses, minors provide students, whenever possible, with flexibility in fulfilling program requirements.

- A minor must be in a discipline outside the student's major field of study.
- A minor consists of 15 semester hours of related courses, of which at least six hours must be completed in residence at Embry-Riddle. A minor must have at least six credits hours in the discipline from courses that are not specifically required in the student's degree program. It includes six hours of upper-division hours; at least three of these must be completed in residence.

- Students should declare their minors as soon as possible, before the beginning of the senior year, by submitting an Official Declaration form approved and signed by their academic advisor.
- Minor requirements are subject to the catalog in effect at the time it is officially declared.
- Students must earn a minimum GPA of 2.00 based on all courses in the minor.
- Courses cannot be shared between minors and no more than two substitutions are permitted in any one minor or in any combination of multiple minors. Substitutions must be approved by the department offering the minor.

In addition to the standard minors described in this catalog, students may earn an interdisciplinary minor by completing required courses approved by the Department Chair and the Dean of the college offering the minor. No substitutions are allowed in the interdisciplinary minor. A new form must be submitted with the appropriate signatures to make changes. Please see your academic advisor or the Records Office for more information.

The following standard minors are offered at the Prescott Campus.

- | | | |
|-------------------------------------|----------------------------------|-------------------------------------|
| • Aeronautical Studies | • Computer Science | • Humanities |
| • Aerospace Engineering | • Computer Security | • Mandarin Chinese |
| • Air Traffic Control | • Electrical Engineering | • Mathematics |
| • Applied Meteorology | • Engineering Science | • Mechanical Engineering |
| • Arabic and Middle Eastern Studies | • Environmental Studies | • Psychology |
| • Asian Studies | • Flight | • Security and Intelligence Studies |
| • Aviation Safety | • Helicopter Flight | • Technical Intelligence |
| • Business Administration | • Helicopter Operations & Safety | • Unmanned Aircraft Systems |

Minor in Aeronautical Studies

This minor gives students increased exposure to advanced aviation knowledge by taking a sequence of 18 hours of mostly upper-level Aeronautical Science courses. No more than nine of the 18 hours required for this minor can come from courses required for the student's degree. A minor in Aeronautical Studies can be earned by successfully completing six of the following:

Course	Title	Credits
AS 254	Aviation Legislation	3
AS 309	Aerodynamics	3
AS 310	Aircraft Performance	3
AS 311	Aircraft Engines - Turbine	3
AS 356	Aircraft Systems and Components	3
AS 357	Flight Physiology	3
AS 350	Domestic and International Navigation	3
AS 402	Airline Operations	3
AS 405	Aviation Law	3
AS 408	Flight Safety	3
AS 410	Airline Dispatch Operations	3
AS 411	Jet Transport Systems	3
AS 420	Flight Technique Analysis	3
Total Credits Required		18

Note: This minor is not open to students pursuing a degree in Aeronautical Science or Aeronautics programs.

Minor in Aerospace Engineering

This minor will provide knowledge in basic Aerospace Engineering. Students earn this minor by completing a total of 17 credit hours as follows:

Course	Title	Credits
AE 301	Aerodynamics I	3
AE 313	Space Mechanics	3
AE 318	Aerospace Structures I	3
	Specified Electives	8
Total Credits Required		17

Specified electives - please select from list below:

¹ AE 302	Aerodynamics II	3
¹ AE 314	Experimental Aerodynamics	1
¹ AE 315	Experimental Aerodynamics Lab	1
¹ AE 413	Aircraft Stability and Control	3
¹ ME 309	Airbreathing and Rocket Propulsion	3
² AE 325	Experimental Space Systems Engineering 1	1
² AE 326	Experimental Space Systems Engr. Lab.	1

² AE 414	Space Propulsion	3
² AE 426	Spacecraft Attitude Dynamics and Control	3
² EP 394	Space Systems Engineering	3
AE 416/417	Aerospace Structures and Instrumentation/Lab	2
AE 418	Aerospace Structures II	3
EGR 401	Advanced CATIA	1
ES 413	Engineering Fundamentals Review	1

¹These courses are recommended for students interested in Aeronautics.

²These courses are recommended for students interested in Astronautics.

Note: This minor is not open to students pursuing a degree in Aerospace Engineering.

Minor in Air Traffic Control

The Air Traffic Control (ATC) minor provides the fundamental traffic controller knowledge and technical competency through a mix of classroom instruction, computer-based instruction, and realistic ATC laboratory simulations.

Embry-Riddle has a formal partnership agreement with the FAA that designates the University as an FAA-approved air traffic control training school. This partnership ensures that the learning objectives and the standards of student achievement are relevant to the needs of the FAA.

The FAA has stipulated that only students enrolled in certain aviation degree programs are eligible for entry into the Air Traffic Control (ATC) Collegiate Training Initiative (CTI) program. Although students from any degree program may declare and earn a minor in ATC, eligibility for the CTI program is more restrictive.*

Students wishing to declare ATC as a minor must receive approval of the Chair of the Aeronautical Science department.

To earn a minor in Air Traffic Control, students must successfully complete the following:

Minor Courses of Study

Course	Title	Credits
AT 200	Air Traffic Management I	3
AT 305	Air Traffic Management III	3
AT 401	Air Traffic Management IV	3
AT 405	Air Traffic Management V	3
WX 201	Survey of Meteorology	3

AND

One of the following is required:

AS 119 Private Pilot Operations.4

-OR-

AS 120 Principles of Aeronautical Science.3

-OR-

FAA Private Pilot Certificate1

Total Credits Required 16-19

*Although AT 302 is not required for the ATC minor, those students who wish to be eligible for the CTI program must also take AT 302.

Note: This minor is not open to students pursuing a degree in Air Traffic Management

Minor in Applied Meteorology

The minor in Applied Meteorology introduces the student with an interest in weather to the intriguing world of meteorology. The minor requires nine hours of WX courses beyond the two required courses, WX 201 and WX 301, a total of 15 hours of WX courses. Six hours of these classes must be higher numbered classes than WX 301. Always check the catalog course descriptions for prerequisites.

Course	Title	Credits
WX 201	Survey of Meteorology.	3
WX 301	Aviation Weather	3
Recommended Electives for flight students:		
WX 261	Applied Climatology	3
WX 363	Thunderstorms	3
WX 364	Weather for Aircrews	3
WX 365	Satellite and Radar Weather Interpretation.	3
	Or any combination of WX courses.	9
Total Credits Required		<u>15</u>

Note: Non-aviation students may take WX 252 in lieu of WX 201 and WX 301 plus another 12 hours of Weather (WX) courses. Six hours of upper-level courses are required for a minor.

Note: This minor is not open to students pursuing a degree in Applied Meteorology

Minor in Arabic and Middle Eastern Studies

The Arabic and Middle Eastern Studies Minor introduces the student to the cultures, histories, and languages of Arab countries. A student can earn this minor by successfully completing at least 18 credit hours as follows:

Course	Title	Credits
LAR 101	Arabic I.	3
LAR 102	Arabic II	3
LAR 201	Arabic III	3
LAR 202	Arabic IV	3
RS 306	Studies in Middle Eastern History & Cultures	3
RS 307	Islam and Arabic Culture	3

-OR-

RS 399 Directed Studies3

Total Credits Required 18

With departmental approval, students may also earn this minor using transfer credits in Arabic language and area studies provided they fulfill all other minor requirements listed at the beginning of this section.

Minor in Asian Studies

The Asian Studies minor introduces a student to the cultures, histories, and languages of Asian countries, as well as cross-cultural comparisons between the U.S. and Asia. A student can earn the minor by successfully completing at least 15 related credit hours as follows:

Course	Title	Credits
LCH 101	Mandarin Chinese I	3
LCH 102	Mandarin Chinese II.	3
LCH 199	Special Topics in Lower-Level Chinese Language	3
-OR-		
LCH 201	Mandarin Chinese III	3
RS 300	Observing Asian Cultures*	3
RS 305	Asian Literature	3
Total Credits Required		<u>15</u>

*This course is only offered every other year.

With departmental approval, students may also earn this minor using transfer credits in Asian language, or Asian studies courses

Minor Courses of Study

or study abroad provided they take 6 upper level credits at ERAU and fulfill all other minor requirements listed at the beginning of this section.

Note: This minor is not open to students pursuing a degree in Global Securities and Intelligence Studies, Chinese Track.

Minor in Aviation Safety

Students may earn a minor in Aviation Safety by successfully completing the core along with 9 credit hours selected from the elective list below.

CORE:

Course	Title	Credits
SF	210* Introduction to Aerospace Safety	3
-OR-		
SF	201 Introduction to Health, Occupational, and Transportation Safety	3
SF	320 Human Factors in Aviation Safety	3

AND any three of the following electives:

Course	Title	Credits
SF	330 Aircraft Accident Investigation	3
SF	335 Mechanical and Structural Factors in Aviation Safety	3
SF	341 Safety and Security of Airport Ground Operations	3
SF	345 Safety Program Management	3
SF	350 Aircraft Crash and Emergency Management	3
SF	375 Propulsion Plant Investigation	3
SF	435 Aircraft Crash Survival Analysis and Design	3
SF	445 System Safety in Aviation	3
SF	399/499 Special Topics in Aviation Safety	3
Total Credits Required		15

Note: Students in the Aeronautical Science degree program pursuing the Safety minor who complete SF 210/320 and one other upper-level SF course will not be required to take AS 408. Students taking AS 408 are not required to take SF 210. Students selecting this option must still meet the minimum number of hours required for degree completion in their declared area of concentration.

Note: This minor is not open to students pursuing a degree in Safety Science with an Aviation Safety Area of Concentration.

Minor in Business Administration

Students may earn a minor in Business Administration by successfully completing

the following.

Course	Title	Credits
BA	201 Principles of Management	3
EC	210 Microeconomics	3
-OR-		
EC	211 Macroeconomics	3
BA	210 Financial Accounting	3
BA	311 Marketing	3
	Specified Electives	6
Total Credits Required		18

Specified Electives*

Course	Title	Credits
BA	308 Public Administration	3
BA	319 Managerial and Organizational Behavior	3
BA	320 Business Information Systems	3
BA	322 Airport Insurance	3
BA	324 Aviation Labor Relations	3
BA	332 Corporate Finance I	3
BA	333 Personal Financial Planning	3
BA	335 International Business	3
BA	342 International Finance	3
BA	408 Airport Management	3
BA	410 Management of Air Cargo	3
BA	418 Airport Administration and Finance	3
BA	421 Small Business Management	3
EC	225 Engineering Economics	3
Total Credits Required		18

*Other substitutions for Specified Electives may be approved by the Business Department Chair.

Note: This minor is not open to students pursuing a degree in Aviation Business Administration.

Minor Courses of Study

Minor in Computer Science

Students may earn a minor in Computer Science by successfully completing the following:

Course Title	Credits
CS 125 Computer Science I	4
CS 225 Computer Science II	4
SE 300 Software Engineering Practices	3
Upper Level CS/SE/CEC Electives*	6
Total Credits Required	17

* In addition to any 300-400 level CS/SE/CEC electives, students may take ES 405 or any computer-related course approved by the Mathematics and Computer Science Department.

Minor in Computer Security

The minor in Computer Security is intended to provide an introduction to the technologies, issues, and limitations of Computer Security in the context of both computer science and information security in general. The minor consists of the six courses shown below. Students with prior programming experience are encouraged to customize this minor by proposing other technical courses in place of all or part of the lower-division sequence of EGR 115 followed by CS 225.

Course Title	Credits
EGR 115 Introduction for Computing for Engineers	3
CS 225 Computer Science II	4
CS 303 Network Security	3
CS 305 Database Systems and Data Mining	3
CS 420 Operating Systems	3
CS 432 Information and Computer Security	3
Total Credits Required	19

Minor in Electrical Engineering

This minor will provide knowledge of analog or digital electronics and its application to the fields of aerospace and mechanical engineering.

Course Title	Credits
EE 223 Linear Circuit Analysis I	3
EE 224 Electrical Engineering Laboratory I	1
EE 309 Signal and Linear System Analysis	4

Select either the Digital or Analog option:

Digital Option

Course Title	Credits
CS 125 Computer Science I	4
CEC 320 Microprocessor Systems	3
CEC 322 Microprocessor Systems Laboratory	1

Analog Option

Course Title	Credits
EE 302 Electronic Devices and Circuits	3
EE 304 Electronic Circuits Laboratory	1
EE 4XX Elective and Laboratory	4
Total Credits Required	16

Note: This minor is not open to students pursuing a degree in Electrical Engineering.

Minor in Engineering Science

This minor will provide knowledge in basic fundamentals of Engineering. Students earn this minor by completing a total of 15 credit hours as follows:

Course Title	Credits
ES 201 Statics	
OR-	
ES 207 Fundamentals of Mechanics	3
-AND-	
Specified Electives 200 level or above	6
Specified Electives 300 level or above	6
Total Credits Required	15

Specified electives - please select from list below:

Course Title	Credits
ES 202 Solid Mechanics	3
ES 204 Dynamics	3
ES 206 Fluid Mechanics	3
ES 305 Thermodynamics	3
ES 306 Fiber Optics	3
ES 315 Space Environment and Effects	3
ES 320 Engineering Materials Science	2
ES 321 Engineering Materials Science Lab	1
ES 403 Heat Transfer	3
ES 312 Energy Transfer Fundamentals	
OR	

Minor Courses of Study

ES 412 Structural Dynamics.3

Note: This minor is not open to students pursuing a degree in Aerospace Engineering or Mechanical Engineering.

Minor in Environmental Studies

This course sequence is an interdisciplinary program designed to provide a fundamental knowledge of the natural environment and the dimensions of human impacts. It provides in-depth analysis of the relationship between the environment, culture, and law. Furthermore, it supplies knowledge about major environmental issues surrounding technology and technical careers. Not open to Aviation Environmental Science students.

Course	Title	Credits
PS 107	Elements of Biological Science	3
PS 101	Basic Chemistry	
-OR-		
PS 105	General Chemistry I	
-OR-		
PS 108	Contemporary Chemistry	
-OR-		
PS 140	Chemistry for Engineers	3/4
AES 142	Introduction to Environmental Science.	3
AES 304	Environmental Science	
-OR-		
AES 309	Principles of Ecology	3
SS 360	Environmental Law	
-OR-		
COM350	Environmental Communication.	3
Total Credits Required		15-16

Minor in Flight (Fixed Wing)

The Flight minor incorporates the courses required to obtain the FAA commercial pilot certificate with instrument and multi-engine ratings. In addition to the required flight courses, rigorous academic classes are included to provide professional pilot education in excess of the minimum FAA requirements for the associated FAA certificates. Included is instruction in CRM, team build-

ing, resource management, communication skills, and other topics associated with piloting multi-engine aircraft at the commercial level. Students must select one of two tracks

Course	Title	Credits
AS 119	Private Pilot Operations.	4
AS 221	Instrument Pilot Operations.	3
AS 321	Commercial Pilot Operations	3
-AND-		
FLIGHT TRACK*		
FA 119	Private Single Flight	1
FA 221	Instrument Single Flight	1
FA 321	Commercial Single Flight	1
FA 323	Commercial Multi Add On.	1
	Upper-Level AS Course.	3
-OR-		
FLIGHT EDUCATION TRACK*		
AS 421	Flight Instructor Ground Course	4
FA 119	Private Single Flight	1
FA 221	Instrument Single Flight	1
FA 321	Commercial Single Flight	1
FA 323	Commercial Multi Add On.	1
FA 421	Flight Instructor Rating	1
FA 460	Multi-Engine Flight Instructor Rating.	2
Total Credits Required		17/21

*See the Advanced Standing section in the University Academic Regulations and Procedures and the Aeronautical Science Notes under the Aeronautical Science degree sections of this catalog for information pertaining to these courses and the awarding of credit for previously earned FAA certificates.

Note: This minor is not open to students pursuing a degree in Aeronautical Science with an Airline Pilot, Commercial Pilot or Military Pilot specialty.

Minor in Helicopter Flight

This minor incorporates courses required to obtain the FAA private and commercial pilot certificates and either the helicopter instrument rating or the helicopter flight instructor certificate. Rigorous academic classes are included to provide professional pilot education. Included is instruction in resource management, high-altitude helicopter operations, and other topics associated with piloting helicopters at the commercial level. All helicopter

Minor Courses of Study

flight activities must be completed with the approved University provider.

Course	Title	Credits
AS	142 Private Helicopter Operations	3
AS	252 Instrument Helicopter Operations	3
AS	372 Commercial Helicopter Operations	3
FH	142 Helicopter Pilot Flight Private	1
FH	252 Helicopter Pilot Flight Instrument	1
FH	372 Helicopter Pilot Flight Commercial	1

-AND-

Any upper-level (300/400) AS, SF, or WX course . . . 3

-OR- both of the following:

AS	442 Flight Instructor Helicopter Operations . . 4
FH	442 Helicopter Pilot Flight Instructor 1

Total Credits Required 15/17

Note: This minor is not open to students pursuing a degree in Aeronautical Science with a Helicopter Pilot specialty.

Minor in Helicopter Operations and Safety

This minor was developed with and for the helicopter industry. Students will develop an understanding of aviation safety, maintenance, personnel management and training, and operations management programs in use by the government and civil aviation. Additionally, learning about advanced technology used in the industry is an integral part of this program. This minor is only open to students also pursuing a Helicopter Flight Minor. Students declaring this minor must be FAA licensed helicopter pilots. A minor in Helicopter Operations and Safety can be earned by successfully completing all of the following:

Course	Title	Credits
SF	210 Introduction to Aerospace Safety	3
SF	345 Safety Program Management	3
AS	378 Environmental Helicopter Operations . . . 3	
AS	388 Helicopter Flight Planning	3
AS	428 FMS/Autopilots for Helicopters	3
AS	438 Advanced Helicopter Operations	3
Total Credits Required		<u>18</u>

Minor in Humanities

Students may earn a minor in Humanities by successfully completing 18 hours. Within those 18 hours, students must select two courses from the HU 140-146 series for a subtotal of six credits.

Additionally, students must complete one or more courses selected from each of the lists below for a subtotal of 12 credits.

NARRATIVE

Course	Title	Credits
HU	300 World Literature	3
HU	305 Modern Literature	3
HU	310 American Literature	3
HU	325 Exploring Film	3

SPECULATIVE

Course	Title	Credits
HU	330 Values and Ethics	3
HU	335 Technology and Modern Civilization	3
HU	341 World Philosophy	3

RELIGION AND FINE ARTS

Course	Title	Credits
HU	320 Aesthetics of Visual and Musical Arts . . . 3	
HU	345 Comparative Religions	3
HU	355 Creative Writing	3
Total Credits Required		<u>18</u>

HU 399/HU 499, Special Topics in Humanities, may be included with advance permission of the department chair.

Minor in Mandarin Chinese

The Mandarin Chinese Language minor prepares students for intermediate proficiency in the languages defined by the American Council of Teachers of Foreign Languages and the Interagency Language Roundtable. A student can earn this minor by successfully completing 15 credit hours as follows:

Course	Title	Credits
LCH	201 Mandarin Chinese III	3
LCH	202 Mandarin Chinese IV	3
LCH	301 Intermediate Chinese I	3
LCH	302 Intermediate Chinese II	3

Minor Courses of Study

LCH 205 Modern Chinese Films	
-OR-	
LCH 399 Special Topics in Chinese Language	3

Total Credits Required 15

A student may also earn this minor by successfully passing Embry-Riddle course equivalency tests for up to 9 credits (provided that a student is not using the course equivalency test for credits in the Asian Studies Minor), and earning 6 credits at the upper level from the list above.

Note: This minor is not open to students pursuing a degree in Global Securities and Intelligence Studies, Chinese Track.

Minor in Mathematics

Students may earn a minor in Mathematics by completing the following:

Course Title	Credits
MA 241 Calculus and Analytic Geometry I	4
MA 242 Calculus and Analytic Geometry II	4
MA 243 Calculus and Analytic Geometry III	4
MA 245 Applied Differential Equations.	3

-OR-	
MA 345 Differential Equations and Matrix Methods	4
MA Electives (approved by department chair)	5-6

Total Credits Required 21

Minor in Mechanical Engineering

This minor will provide knowledge in basic Mechanical Engineering. Students earn this minor by completing a total of 17 credit hours as follows:

Course Title	Credits
ME 304 Introduction to Machine Design.	3
ME 305 Machine Design Laboratory	1
Specified Electives	<u>13</u>

Total Credits Required 17

Specified electives - please select from list below:

¹ ME 302 Introduction to Robotics	3
¹ ME 302L Introduction to Robotics Lab.	1
¹ ME 406 Robotics II	3
¹ ME 406L Robotics II Laboratory	1
¹ MA 412 Probability and Statistics	3
² ME 309 Airbreathing and Rocket Propulsion.	3
² ME 417 Advanced Propulsion	3
^{2,3} ES 403 Heat Transfer	3
^{2,3} ME 403 Thermal Power Systems	3

³ ME 312 Alternative Energy	3
³ ME 432 Advanced Alternative Energy	3
EGR 401 Advanced CATIA.	1
ES 413 Engineering Fundamentals Review.	1

¹These courses are recommended for students interested in Robotics.

²These courses are recommended for students interested in Propulsion.

³These courses are recommended for students interested in Energy.

Note: This minor is not open to students pursuing a degree in Mechanical Engineering.

Minor in Psychology

Students may earn a minor in Psychology by successfully completing the three specified courses and an additional two courses from the following list, totaling 15 credit hours.

Course Title	Credits
PSY 101 Introduction to Psychology.	3
PSY 350 Social Psychology	3

-AND-	
HF 201 Introduction to Human Factors	

-OR-	
HF 210 Human Factors I: Principles and Fundamentals	3

Two of the following courses are also required:

Course Title	Credits
BA 319 Managerial and Organizational Behavior	3
HU 361 Interpersonal Communication	3
HU 363 Communication and Society.	3
PSY 310 Sensation and Perception	3
PSY 315 Cognitive Psychology	3
PSY 320 Aviation Psychology.	3
PSY 335 Physiological Psychology	3
PSY 340 Industrial-Organizational Psychology.	3
PSY 345 Training and Development	3
PSY 400 Introduction to Cognitive Science	3
SS 312 Personality and Profiling	3
SS 350 Psychology of Relationships.	<u>3</u>

Total Credits Required 15

Three credits of HF 299, 399, or 499 or PSY 299, 399, or 499 (Special Topics in Psychology) may be substituted with advance permission of the department chair.

Minor Courses of Study

Minor in Security and Intelligence Studies

This minor is designed for students who wish to gain a general understanding of security and intelligence concepts and processes, their application and their vital importance to national security. The student is required to take three core courses that will provide the basic knowledge and understanding of these disciplines. An additional three courses elected from the designated list address how these disciplines are applied in the government sector, the private sector and in the global environment.

Course	Title	Credits
SS 210	Security Fundamentals	3
SIS 315	Global Intelligence Studies	3
SIS 325	History of Terrorism	3

Three courses selected from the following list:

Course	Title	Credits
SIS 323	Intelligence and Security	3
SIS 335	Counterintelligence	3
SIS 410	Corporate Security Management and Operations	3
SIS 420	Aviation Security and Technology	3
SIS 422	Homeland Security and Technology	3

Total Credits Required 18

Note: This minor is not open to students pursuing a degree in Global Security and Intelligence Studies.

Minor in Technical Intelligence

This minor is primarily aimed at students in the Space Physics and Engineering programs with an interest in intelligence applications. The minor is also accessible to motivated students in the Global Security and Intelligence Studies program. This course of study emphasizes the global aspects of technical intelligence gathering and reviews the technologies involved. The minor will prepare students to work in intelligence-gathering fields and research.

Required Courses:

Course	Title	Credits
PS 330	Electricity and Magnetism I	3
PS 420	Remote Sensing	

-OR-

PS 490	Senior Research Thesis, Part I.	3
SIS 315	Studies in Global Intelligence I.	3
SIS 323	Intelligence and Technology	

-OR-

SIS 400	International Security and Globalization	3
---------	---	---

-AND-

Students must choose three of the following:

Course	Title	Credits
PS 221	Intermediate Physics Laboratory	2
PS 331	Electricity and Magnetism II.	3
SIS 400	International Security and Globalization	3
SIS 405	Environment and Security.	3
SS 327	International Relations	3

Total Credits Required 20/21

Minor in Unmanned Aircraft Systems

The Unmanned Aircraft Systems minor provides the students with an education and training on the various UAS platforms and applications currently employed by federal, state, local and private agencies. This minor will have both classroom and laboratory/simulation classes. This minor is designed

for students of all Majors wishing to become unmanned aircraft pilots or mission payload operators. Lab fee.

Required Courses:

Course	Title	Credits
AS 109	Flight Transition Ground Course	
-OR-		
AS 120	Principles of Aeronautical Science	
-OR-		
AS 119	Private Pilot Operations.	2/3/4
AS 220	Unmanned Aircraft Systems.	3
AS 235	Unmanned Aircraft Systems Operations and Cross-Country Data Entry.	3
AS 315	UAS Robotics.	3
BA 337	Entrepreneurism and Technology Commercialization	3
AS 403	Unmanned Sensing Systems	3
AS 473	UAS Flight Simulation (Lab).	3
Total Credits Required		20/21/22

Note: Due to International Traffic in Arms Regulations (ITAR) imposed by the United States State Department, this program will only be open to U.S. citizens.

UNDERGRADUATE COURSE DESCRIPTIONS

Embry-Riddle Aeronautical University course offerings at the Prescott campus are listed in alphabetical order, according to the course designations below.

AE	Aerospace Engineering	EGR	Engineering	MSL	Military Science and Leadership
AES	Aviation Environmental Science	EP	Engineering Physics	PS	Physical Science
AF	Air Force Aerospace Studies	ES	Engineering Science	PSY	Psychology
AS	Aeronautical Science	FA	Flight-Airplane	RS	Regional Studies
AT	Air Traffic Control	FH	Flight-Helicopter	SE	Software Engineering
BA	Business Administration	HON	Honors	SF	Safety Science
CE	Cooperative Education	HU	Humanities	SIS	Global Security and Intelligence Studies
CEC	Computer Engineering	IS	Interdisciplinary Studies	SS	Social Sciences
COM	Communication	IT	Information Technology	UNIV	College Success
CS	Computer Science	L	Languages	WX	Applied Meteorology
EC	Economics	MA	Mathematics		
EE	Electrical Engineering	ME	Mechanical Engineering		

Courses numbered 001–099 are basic skills courses and do not apply toward degree requirements. Courses numbered 100–299 are lower-division courses and are generally taken in the freshman and sophomore years. Many lower-division courses serve as prerequisites for other coursework, so students are urged to plan ahead to meet necessary prerequisites. Courses numbered 300–499 are upper-division courses, reflecting advanced levels of technical skills and disciplinary knowledge. Upper-division work is generally taken in the junior and senior years. Only the dean of a college, or an appointed designee, may waive corequisite and prerequisite requirements. The University reserves the right to administratively drop a student from a course in which prerequisite or co-requisite requirements have not been met.

Course numbers ending in 95 designate time-limited offerings, such as those taught by a visiting lecturer. Course numbers ending in 96 or 97 identify special sequential courses. Those ending in 98 provide students with a unique, collective program of learning activities supervised by a professor. Courses ending in 99 denote individual study between professor and student.

Numbers in parentheses, immediately following course titles and numbers, indicate lecture and laboratory hours that a class meets each week. For example, (3,3) signifies that the course consists of three lecture hours and three laboratory hours weekly.

The following courses are not necessarily offered every term, nor are they offered at all campus locations.

Aerospace Engineering

A grade of C or better is required in MA 241, MA 242, and either PS 150 and PS 160 or PS 215, PS 216, and PS 208 for entry into all AE courses. A passing grade in all prerequisite courses or department consent is required for entry into all AE courses.

AE 301

Aerodynamics I (3,0)

3 Credits

The atmosphere. Incompressible and compressible one-dimensional flow. Airspeed measurement. Two-dimensional potential flow. Circulation theory of lift. Thin airfoil theory. Viscous flow. Boundary layers. Finite wing theory. Drag in incompressible flow. Wing-body interactions.

Prerequisites: ES 206, MA 243.

Corequisite: ES 305.

AE 302

Aerodynamics II (3,0)

3 Credits

Laminar and turbulent flows, transition point, determination of skin friction drag on an airfoil. Obtaining equations for streamline, for particle path, and for streakline in a flow field. Compressible flow, shock waves, thermodynamics of gas flow. Reversible and irreversible processes. Changes in pressure, density, and temperature across shock waves. Isentropic duct flow and flow through a nozzle. Static performance and maneuvers in flight. Propeller theory.

Prerequisites: AE 301, ES 305.

AE 313

Space Mechanics (3,0)

3 Credits

This course represents the vector-based solution of the two-body problem and the solution for the position and time problem (Kepler's equations). These are used to analyze orbits, satellite launch, ground tracks, orbit transfer, interplanetary trajectories (Lamberts problem), and interception and spacecraft rendezvous and intercept problems, the rocket equation and the staging problem. Using three-dimensional vector dynamics, the motion and stability of rigid and semi-rigid spacecraft are studied as are the means for controlling spacecraft orientation..

Prerequisites: ES 204, MA 345.

AE 314

Experimental Aerodynamics (1,0)

1 Credit

This course supports the Experimental Aerodynamics lab by providing lectures based in practice and theory. Topics include wind tunnel design, instrumentation, scaling effects, tunnel wall corrections, data acquisition, and data reduction as well as good experimental practices. The Experimental Aerodynamics Lab AE 315 must be taken during the same semester as AE 314.

Prerequisite: COM 221.

Corequisite: AE 302.

AE 315

Experimental Aerodynamics Laboratory (0,3)

1 Credit

This laboratory consists of a sequence of experiments that demonstrate basic aerodynamic theory while developing skills in the use of classic and modern experimental apparatus, the practice of good experimental technique, and the writing of good experimental reports. Specific experiments depend on apparatus availability and instructor preference. The Experimental Aerodynamics Lab, AE 315, must be taken during the same semester as AE 314.

Prerequisite: COM 221.

Corequisite: AE 302.

AE 318

Aerospace Structures I (3,0)

3 Credits

Methods of stress analysis of statically determinate lightweight structural systems. Applications include space structures and semimonocoque structures. Inertia force and load factor computation. Topics in applied elasticity. Three-dimensional beam bending. Shear flow. Materials considerations. Finite element modeling and computer-aided analysis

Prerequisite: ES 202.

AE 325

Experimental Space Systems Engineering (1,0)

1 Credit

Lecture-based course to support the Space Systems Engineering Laboratory. Course covers subsystems of spacecraft, experimental methods, data acquisition, and data reduction. The Experimental Space Systems Engineering Lab, AE 326, must be taken during the same semester as AE 325.

Prerequisite: PS 250.

Corequisite: EP 394.

Undergraduate Course Descriptions

AE 326

Experimental Space Systems Engineering Laboratory (0,3)

1 Credit

Laboratory for the fundamentals of spacecraft systems. A lab covering each of the major subsystems of spacecraft, which may include propulsion, attitude control, power, telemetry and command, communications, structures and vibrations, materials and mechanisms, thermal control, and mass properties. The Experimental Space Systems Engineering Lab, AE 326, must be taken during the same semester as AE 325.

Prerequisite: PS 253.

Corequisite: EP 394.

AE 350

Project Engineering (3,0)

3 Credits

Role of the engineer in project management with emphasis on systematic evaluation of the benefits and costs of projects involving engineering design and analysis. Proposal preparation and presentation, engineering contracts, negotiation techniques. Value engineering.

Prerequisite: Junior class standing or consent of instructor.

AE 401

Advanced Aerodynamics I (3,0)

3 Credits

An advanced-level presentation of the theory and applications of incompressible aerodynamics. Kinematics and dynamics of fluid flow. Flow about a body. Shock tube flow. Thin airfoil and finite wing theory. Approximation techniques; numerical methods. Introduction to compressible flow.

Prerequisites: AE 302, MA 441.

AE 409

Aircraft Composite Structures (3,1.5)

3 Credits

Introduction to reinforced plastic composite structural materials and their use in modern aircraft. Discussion of basic material properties, testing procedures, design and analysis using classical lamination theory, and fabrication techniques, including some hands-on demonstrations.

Prerequisites: ES 202, ES 320.

AE 411

Advanced Experimental Aerodynamics (2,3)

3 Credits

This course consists of a series of advanced experiments using a wind tunnel. Topics include model design and construction, testing procedures, control surface testing, propeller testing, the use of wind tunnel data, scale effects, complete model testing, and an introduction to supersonic testing.

Prerequisite: AE 314.

AE 413

Airplane Stability and Control (3,0)

3 Credits

Development of longitudinal, lateral, and directional stability and control equations. Control surface design. Control effectiveness and size requirements. Dynamic control theory. Handling characteristics and maneuvering stability of aircraft.

Prerequisites: MA 345, ES 204.

Corequisite: AE 302.

AE 414

Space Propulsion (3,0)

3 Credits

The course provides the student with an introduction to the basic principles of liquid and solid propulsion systems. Flight performance parameters are presented for single and multistage vehicles. The thermo-chemistry of the combustion process will also be discussed. Performance enhancements of nuclear rockets and electric propulsion will be covered.

Prerequisites: AE 301, ES 305.

AE 416

Aerospace Structures and Instrumentation (1,0)

1 Credit

Lecture-based course to support the Structures and Instrumentation Laboratory. Course emphasizes aerospace vehicle testing through instrumentation, data acquisition, and data reduction. Test plans and design are used. The Structures and Instrumentation Laboratory, AE 417, must be taken during the same semester as AE 416.

Prerequisites: COM 221, EE 335, and either AE 318 or ME 304.

Undergraduate Course Descriptions

AE 417

Aerospace Structures and Instrumentation Laboratory (0,3)

1 Credit

Principles of modern aerospace vehicle testing and instrumentation. Basic electrical measurements and devices such as strain gages, piezoelectric sensors, and thermocouples. Topics could include measurement of fluid pressure and flow; temperature; thermal and transport properties; strain; motion; vibration; force and torque. Experimental static and dynamic analysis of structures. Processing and analyzing experimental data; report writing and data presentation. The Structures and Instrumentation Laboratory, AE 417, must be taken during the same semester as AE 416.

Prerequisites: COM 221, EE 335, and either AE 318 or ME 304.

AE 418

Aerospace Structures II (3,0)

3 Credits

Continuation of AE 318. Methods of computer-aided deflection and stress analysis of redundant lightweight structural systems by means of virtual work principles and their energy counterparts. Introduction to finite element theory. Buckling considerations. Applications include space structures and semimonocoque structures.

Prerequisites: AE 318.

AE 420

Aircraft Preliminary Design (3,3)

4 Credits

Airplane conceptual design principles are developed to meet modern aerodynamic, propulsion, structural, and performance specifications. A complete airplane is designed, resulting in a design package consisting of specifications, aerodynamic calculations, inboard profile drawing, weight and balance, general arrangement drawing, aerodynamic drag analysis, and complete performance report.

Prerequisites: EGR 200, AE 314, AE 413, or consent of instructor.

AE 421

Aircraft Detail Design (2,4)

4 Credits

This course is a study of the principles of aircraft detail and component part design, manufacture, and production are covered along with projects to give actual experience in the design of aircraft compo-

nents. The design of an aircraft is carried from the general layout to the design of its detail parts and the design of necessary tools.

Prerequisites: AE 418, AE 420, or consent of the instructor.

AE 426

Spacecraft Attitude Dynamics (3,0)

3 Credits

Fundamentals of spacecraft attitude dynamics. Three-dimensional rigid-body kinematics. Stability and dynamics of symmetric and tri-inertial bodies. Attitude, nutation, and spin-control maneuvers for spin-stabilized spacecraft. Effects of energy dissipation. Momentum-biased spacecraft dynamics. Stability, modeling, and simulation of spin-stabilized and momentum-biased spacecraft. Elements of three-axis stabilized spacecraft. Effects of gravity gradient, solar radiation pressure, atmospheric drag, and magnetic torque on spacecraft attitude.

Prerequisite: AE 313.

AE 427

Spacecraft Preliminary Design (3,3)

4 Credits

Spacecraft preliminary design principles are developed to meet mission objectives. A complete spacecraft is designed, resulting in a design package consisting of specifications; calculations; CAD drawings; weight and various subsystem budgets; and a series of trade studies, reviews, and design reports.

Prerequisites: EGR 200, AE 313, EP 394, or instructor consent.

Corequisite: AE 426 or instructor consent.

AE 430

Control Systems Analysis and Design (3,0)

3 Credits

This course explores modeling, analysis and control of dynamical systems with aerospace applications, transfer functions, block diagram algebra, Routh Hurwitz stability criteria, and an introduction to system design using root locus and Bode diagrams.

Prerequisites: MA 345, ES 204.

AE 433

Aerodynamics of the Helicopter (3,0)

3 Credits

The development of rotating-wing aircraft and the helicopter. Hovering theory and vertical flight performance analysis. Auto-rotation, physical concepts of blade motion and control, aerodynamics and per-

Undergraduate Course Descriptions

formance of forward flight. Blade stall, stability, and vibration problems. Design problems.

Prerequisites: AE 302, MA 441.

AE 445

Spacecraft Detail Design (2,4)

4 Credits

This course is a study of the principles of spacecraft detail and subsystem design, analysis, modeling, manufacture and test are covered and incorporated into projects to give actual experience in the detail design and integration of spacecraft subsystems and systems. Integration of multiple subsystems into a single functional model is a key component of the course.

Prerequisite: AE 318, AE 426, AE 427, or consent of instructor.

Corequisite: AE 430.

AE 299 - 499

Special Topics in Aerospace Engineering

1-6 Credits

Individual independent or directed studies of selected topics in aerospace engineering.

Prerequisite: Consent of instructor and the department chair. May be repeated with a change of content.

Aviation Environmental Science

AES 111

Plant Biology (3,3)

4 Credits

This course will study the principles and processes associated with the biology of plants, including a survey of fungi, green protista, and plants. Major emphasis on vascular plants, evolutionary origins, and ecological adaptations. One three-hour laboratory session per week.

AES 112

Animal Biology (3,3)

4 Credits

This course will study the principles and processes found in the animal kingdom, including a survey of the major animal groups. Major emphasis is on structure, diversity, phylogeny, and ecological adaptations. One three-hour laboratory session per week.

AES 142

Introduction to Environmental Science (3,0)

3 Credits

An introductory course that stresses the interrelations of all aspects of the living and the nonliving world. Introduces the student to key concepts and principles that govern how nature works and the application of these concepts and principles to possible solutions to environmental and resource problems.

AES 240

Natural History of the Region (3,3)

4 Credits

This course focuses on the geology, paleohistory, flora, fauna, and ecosystems of the region. The course covers such topics as the relationship between slope, elevation, topography, and plant communities.

AES 304

Environmental Science (3,0)

3 Credits

A survey course in the environmental problems arising from human use and abuse of the environment. Ecological, economic, sociologic, and technologic principles will be applied to the management control of pollution of the atmosphere and water sources of the Earth.

Prerequisite: AES 142 or permission of the instructor.

AES 306

Consumer and Hazardous Waste (3,0)

3 Credits

Introduction to sources, characteristics, and concerns of hazardous materials in environmental systems. Examination of general approaches toward site assessment, risk analysis, site remediation, and other issues pertinent to hazardous waste management. Development of environmental literacy is emphasized.

Prerequisite: One year of high school chemistry or concurrent enrollment in PS 105 or PS 106.

AES 308

Atmospheric Environmental Studies (3,0)

3 Credits

Overview of atmospheric environmental topics on local and regional issues as well as global change issues. Introduction to the chemistry of atmospheric pollution. Examination of sources of air pollution especially from the aerospace industries. Includes discussion of monitoring, regulation, and control of air pollution.

Prerequisite: AES 142 or permission of instructor.

Undergraduate Course Descriptions

AES 309

Principles of Ecology (2,3)

3 Credits

This course is designed to provide practical experience in the scientific measurement of environmental parameters. Experience in collecting and identifying plants and animals in the different ecosystems will be developed by field and laboratory work.

Prerequisite: AES 142 or permission of instructor.

AES 310

Air Quality and Sound Pollution (3,0)

3 Credits

The examination of the fundamental principles that govern air quality, its pollution, and its management. Also the fundamental principles associated with sound pollution and its management.

Prerequisite: AES 142 or permission of the instructor.

AES 311

Water Quality (3,0)

3 Credits

The hydrologic cycle, with emphasis on atmospheric, land surface, shallow subsurface, and groundwater processes. Examination of physical, chemical, and biological properties of these aquatic systems and the effects of common pollutants. Development of environmental literacy is emphasized.

Prerequisite: AES 142 or permission of the instructor.

AES 312

Plant Identification (2,3)

3 Credits

This course is designed to provide practical experience in the identification of local flowering plants through the use of regional floras and recognition of common plant families. Elements of plant collection, identification, and herbarium techniques will be taught through classroom lectures and field and lab work. Students will be required to prepare their own plant collection.

Prerequisite: Junior standing

AES 313

Riparian Ecology (2,3)

3 Credits

The analysis of the structure, function, and classification of riparian habitats with special emphasis on Southwestern waterways. Evaluation of limnological, floral, and geomorphic resources that create specific riparian habitats will be covered.

Prerequisite: Junior standing

AES 330

Environmental Consulting (3,0)

3 Credits

Today's industries, including the aviation industry, are under the umbrella of federal and state regulations dealing with a variety of environmental issues. One aspect of these regulations is an EA (Environmental Assessment), which is part of the NEPA (National Environmental Protection Act) regulations. This process will be examined and used to analyze local and regional projects.

Prerequisite: Junior standing

AES 402

Environmental Quality Laboratory (0,3)

1 Credit

A laboratory course using field techniques and equipment commonly found in the environmental workplace. Projects and demonstrations will use local flight-line and airport municipalities as examples.

Prerequisites: AES 306 or AES 310.

AES 403

Wildlife and Airports (3,0)

3 Credits

An examination of the problems and solutions associated with wildlife and their impact on airport safety. Special emphasis on problems correlated with birds.

Prerequisite: Junior standing

AES 406

Environmental Management (3,0)

3 Credits

This course focuses on the development of an environmental management plan. Today much of the environmental work in corporations, including the aviation industry, is carried out in projects. The management of these projects starts with the development of proposals, funding sources, tasks, and timelines. Employees at a variety of levels are required to help manage projects, so terms and organizational contents will be covered.

Prerequisite: Junior standing

AES 490

Senior Seminar (3,0)

3 Credits

This is a senior capstone course dealing with specific issues associated with the environmental work place both from an airport and municipality point of view. Topics include but are not limited to: storm water issues, noise, fuel spills, NEPA, 404 permitting.

Undergraduate Course Descriptions

Air Force Aerospace Studies

AF 101

The Foundation of the U.S. Air Force (General Military Course) (1,0)

1 Credit

A survey course designed to introduce students to the U.S. Air Force and Air Force Reserve Officer Training Corps. Featured topics include mission and organization of the Air Force, officership and professionalism, military customs and courtesies, communication skills, and Air Force officer career opportunities. A weekly Leadership Laboratory is mandatory for Air Force ROTC pursuing cadets and complements this course by providing cadets with followership experiences.

Corequisite: AF 101L (for AFROTC-enrolled students only).

AF 102

The Foundation of the U.S. Air Force (General Military Course) (1,0)

1 Credit

Continuation of AF 101. Topics include Air Force core values, heritage, leadership principles, and human relations, while continuing to practice Air Force communication skills. A weekly Leadership Laboratory is mandatory for Air Force ROTC pursuing cadets and complements this course by providing cadets with followership experiences.

Corequisite: AF 102L (for AFROTC-enrolled students only).

AF 101L/AF 102L

Leadership Laboratory (0,2)

0 Credit

Consists of Air Force customs, courtesies, leadership, teamwork, field training orientation, drill, and ceremonies. Includes a mandatory physical fitness program. These courses are graded Pass/Fail.

AF 201

The Evolution of USAF Air and Space Power (General Military Course) (1,0)

1 Credit

The AF 201 course is designed to examine the aspects of air and space power through a historical perspective. Using this perspective, the course covers a time period from the first balloons and dirigibles to the Air and Space applications employed at the beginning of the Cold War. Historical examples are studied to extrapolate the fundamentals of air power, including the tenets of air and space power, principles of war,

and Air Force competencies, functions, and doctrine. In addition, the students will continue to discuss the importance of the Air Force core values, through the use of operational examples and historical Air Force leaders, and will continue to develop their communication skills. A weekly Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

Corequisite: AF 201L (for AFROTC-enrolled students only).

AF 202

The Evolution of USAF Air and Space Power (General Military Course) (1,0)

1 Credit

Continuation of AF 201. This course continues to explore Air Force history, beginning with the Vietnam era and culminating with the modern air and space applications employed during Operations Iraqi and Enduring Freedom. A weekly Leadership Laboratory is mandatory for AFROTC cadets and complements this course by providing cadets with followership experiences.

Corequisite: AF 202L (for AFROTC-enrolled students only).

AF 201L/AF 202L

Leadership Laboratory (0,2)

0 Credit

Consists of Air Force customs, courtesies, leadership, teamwork, drill, ceremonies, and field training orientation. Includes a mandatory physical fitness program. These courses are graded Pass/Fail.

AF 301

Air Force Leadership Studies (Professional Officer Course) (3,0)

3 Credits

A study of leadership, management fundamentals, professional knowledge, Air Force personnel evaluation systems, leadership ethics, and the communication skills required of an Air Force junior officer. Case studies are used to examine Air Force leadership and management situations as a means of demonstrating and exercising practical applications of the concepts being studied. A mandatory Leadership Laboratory complements this course by providing advanced leadership experience in officer-type activities, giving students the opportunity to apply the leadership and management principles of this course.

Corequisite: AF 301L (for AFROTC-enrolled students only)

Undergraduate Course Descriptions

AF 302

Air Force Leadership Studies (Professional Officer Course) (3,0)

3 Credits

Continuation of AF 301. A weekly Leadership Laboratory is mandatory.

Corequisite: AF 302L (for AFROTC-enrolled students only)

AF 301L / AF 302L

Leadership Laboratory (0,2)

0 Credit

Provides advanced leadership experience in officer-type activities, giving students the opportunity to apply leadership and management principles. Includes a mandatory physical fitness program. These courses are graded Pass/Fail.

Prerequisites: Completion of the General Military Course or Two-Year Program selection and/or approval of the professor of Aerospace Studies.

AF 401

Preparation for Active Duty (Professional Officer Course) (3,0)

3 Credits

Examines the national security process, regional studies, advanced leadership ethics, and Air Force doctrine. Special topics of interest focus on the military as a profession, officership, military justice, civilian control of the military, preparation for active duty, and current issues affecting military professionalism. Continued emphasis is given to the refinement of communication skills. An additional Leadership Laboratory complements this course by providing advanced leadership management principles.

Corequisite: AF 401L (for AFROTC-enrolled students only).

AF 402

Preparation for Active Duty (Professional Officer Course) (3,0)

3 Credits

Continuation of AF 401. A weekly Leadership Laboratory is mandatory.

Corequisite: AF 402L (for AFROTC-enrolled students only)

AF 401L / AF 402L

Leadership Laboratory (0,2)

0 Credit

Provides advanced leadership experiences in officer-type activities, giving students the opportunity to apply leadership and management principles. Includes a mandatory physical fitness program. These courses are graded Pass/Fail.

Prerequisites: Completion of the General Military Course or Two-Year Program selection and/or approval of the professor of Aerospace Studies.

AF 403L / AF 404L

Leadership Laboratory (0,2)

0 Credit

Mandatory. Provides advanced leadership experiences in officer-type activities. Includes a mandatory physical fitness program.

Prerequisite: Completion of the Professional Officer Course. These courses are graded Pass/Fail.

Aeronautical Science

Enrollment in the following courses is restricted to students in the Aeronautical Science degree program unless approved by the Aeronautical Science Department Chair and the Director of Flight: AS 119, 121, 221, AS 252, AS 321, AS 372, AS 442.

AS 109

Flight Transition Ground Course (2,0)

2 Credits

A review of elementary commercial pilot flight operations including basic aircraft control, elementary radio navigation, air traffic control procedure, cross-country operations, and solo flight. Associated ground instruction will include a review of knowledge areas required for Private Pilot certification. This course is specifically designed for students entering Embry-Riddle's Commercial Pilot program with a Private Pilot certificate and desiring advanced standing.

Prerequisite: FAA Private Pilot Certification with Airplane Single-Engine Land Rating.

AS 119

Private Pilot Operations (4,0)

4 Credits

This course develops aeronautical knowledge required for certification as a Private Pilot with an Airplane Single Engine Land rating. Topics include

Undergraduate Course Descriptions

regulations, safety, pre-solo operations, cross-country planning, airspace, chart use, communications, weather, performance, weight and balance, aerodynamics, and decision-making.

AS 120

Principles of Aeronautical Science (3,0)

3 Credits

An introductory course in Aeronautical Science designed to provide the student with a broad-based aviation orientation in flight-related areas appropriate to all non-Aeronautical Science degree programs. Subjects include historical developments in aviation and the airline industry, theory of flight, airport operations, aircraft systems and performance, elements of air navigation, basic meteorology theory, air traffic principles, flight physiology, and aviation regulations and safety. Not available to Aeronautical Science students or to students with FAA flight certificates.

AS 142

Private Helicopter Operations (3,0)

3 Credits

During this course the student obtains the foundation for all future helicopter aviation training. The student will be introduced to helicopter fundamentals of flight and will become familiar with basic flight maneuvers and operating procedures. Emphasis will be placed on developing a safe and competent pilot who is adequately prepared for solo, cross-country, and night operations. The student will receive training in safety awareness, crew resource management, and aeronautical decision-making. By the end of the course, the student will have met the aeronautical knowledge requirements to take the FAA Private Pilot, Rotorcraft-Helicopter, written knowledge test.

AS 145

Helicopter Flight Transition Ground Course (2,0)

2 Credits

A review of elementary commercial pilot flight operations including basic rotorcraft control, elementary radio navigation, air traffic control procedure, cross-country operations, and solo flight. Associated ground instruction will include a review of knowledge areas required for Private Pilot Helicopter certification. This course is specifically designed for students entering Embry-Riddle's Commercial Helicopter Pilot Program with a Private Pilot certificate and desiring advanced standing.

Prerequisite: FAA Private Pilot Helicopter Certification

AS 220

Unmanned Aerial Vehicles and Systems (3,0)

3 Credits

This course is a survey of Unmanned Aerial Vehicles and systems, emphasizing the military and commercial history, growth, and applications of UAVs. Course will include basic acquisition, use, and operation of UAVs with an emphasis on operations.

Prerequisite: U.S. Citizenship required.

AS 221

Instrument Pilot Operations (3,0)

3 Credits

This course develops aeronautical knowledge required for addition of an Instrument Airplane rating to a Private Pilot certificate. Topics include instrument flying regulations, safety, operations, navigation systems, chart use, weather, flight planning, decision-making, and crew resource management.

Prerequisite: AS 109 or AS 119.

AS 235

Unmanned Aircraft Systems Operation and Cross-Country Data Entry (3,0)

3 Credits

This course will address the use of the various systems and navigation equipment that exists on unmanned aircraft. Students will learn to analyze and identify the different systems that are employed on unmanned aircraft. They will identify the appropriate navigational system packages that are employed on various unmanned aircraft.

Unmanned aircraft employ navigation systems that are, in many ways, significantly different than manned aircraft. These systems include navigation by ground observers; navigation using GPS-determined position on a ground-based moving map display; and fully-autonomous GPS-based navigation. Students will differentiate the types of navigation systems available; and use the appropriate procedure to enter the navigation data into the unmanned aircraft's navigational system.

Prerequisite: AS 220 and U.S. Citizenship required.

AS 246

Basic Air Navigation (3,0)

3 Credits

An introduction to navigation for Aeronautical Science students. The course content includes aircraft instruments and systems theory, aircraft performance, navigation theory and solution methods, application of electronic navigation systems, precision flight con-

Undergraduate Course Descriptions

trol principles, navigation information sources and planning procedures, and special problems in navigation with emphasis on flight planning.

AS 252

Instrument Helicopter Operations (3,0)

3 Credits

This course will examine helicopter instrument flying in the National Airspace System below 18,000 feet. Topics to be covered include Federal Aviation Regulations, helicopter performance for instrument flight, instrument approach procedures, weather related to instrument flying, en route navigation, and the elements of resource management. By the end of the course, the student will have met the aeronautical knowledge requirements to take the FAA Instrument, Rotorcraft-Helicopter written knowledge test.

Prerequisite: AS 142 or AS 145 or FAA Private Pilot Certificate with Rotorcraft-Helicopter Rating.

AS 254

Aviation Legislation (3,0)

3 Credits

This course examines the evolution of federal civil aviation regulations in the U.S. It provides an overview of the past and present problems prompting regulation of the industry, the resultant safety legislation, airport development funding legislation, and international aviation legislation.

AS 309

Aerodynamics (3,0)

3 Credits

Incompressible flow airfoil theory, wing theory. Calculation of stall speed, drag, and basic performance criteria. Configuration changes, high and low speed conditions. Special flight conditions. Introduction to compressible flow.

Corequisite: PS 114.

AS 310

Aircraft Performance (3,0)

3 Credits

Aerodynamic performance of aircraft powered by reciprocating, turboprop, or jet turbine engines. Stability and control, weight and balance, and operating data.

Prerequisite: AS 309.

AS 311

Aircraft Engines-Turbine (3,0)

3 Credits

A comprehensive study of aircraft gas turbine engine fundamentals and theory at the technical level. Areas of study include background, types, variations, and applications; engine theory; construction and design; systems and accessories; representative engines.

AS 315

Unmanned Aircraft Systems Robotics (3,0)

3 Credits

This course will be a description and analysis of the various control packages that apply to robotic operations that exist on unmanned aircraft. The flight control systems and relays between the pilot and sensor operators in an unmanned aircraft's ground control station and/or control network utilize a number of tools that are closely related to basic robotics. These tools may include remotely-operated autopilots, command links between the ground-based pilot's operation of the flight controls on an unmanned aircraft, and fully autonomous unmanned aircraft controlled via sophisticated satellite-downlink receivers. The skill sets required to understand these systems, operate them, and repair them are significantly different than those employed in conventional manned aircraft. The course will include an analysis of robotics and basic robotics concepts and technology as they apply to unmanned aircraft. Students will learn to identify and employ basic UAS robotic systems and subsystems, and apply the integration of this equipment in unmanned aircraft. Students will gain experience building small robots, and devise rudimentary programs for these robots.

This course is an analysis of UAS robotics with an emphasis on the technology, systems, subsystems, and basic programming of UAS. The course will include the following topics:

- Robotic primitives and paradigms
- Artificial intelligence
- Power and control systems
- Basic sensor systems

Programming using a graphical programming language and the integration of such. Coursework will consist of a mix of guided discussions and several hands on projects

Pre-requisite: AS 220, Junior standing and US Citizenship required.

Undergraduate Course Descriptions

AS 321

Commercial Pilot Operations (3,0)

3 Credits

This course develops aeronautical knowledge required for certification as a Commercial Pilot with Single and Multi-Engine Land ratings. Topics include multi-engine flying in VFR and IFR environments, including high altitude, night, winter, and mountain. Topics also include regulations, safety, weather, aerodynamics, weight and balance, performance, aircraft systems, navigation facilities, chart use, and decision-making.

Prerequisite: AS 221.

AS 350

Domestic and International Navigation (3,0)

3 Credits

This course will study FAR Part 121 domestic and flag regulations and evaluate their impact on long-range domestic and international flights. The student will be able to use ICAO, JAA, and FAA operational requirements and typical air carrier Ops SPECS to plan domestic and transoceanic flights. CBT simulation programs may be used as necessary to demonstrate actual flight scenarios. High-altitude airspace, navigation, and approach procedure chart interpretation will be examined in detail. Students will study and use the concepts of MNPS and RVSM airspace, dispatch procedures, ETOPS, ETP, driftdown, track messages, LRN accuracy checks, Oceanic Air Traffic Control clearances, international METARs and TAFs, and emergencies and contingencies while on oceanic tracks. Communication systems requirements and methodology will be examined to include satellite, digital, and analog devices.

Prerequisites: AS 246 and AS 221 or Instrument Rating.
Corequisite: AS 310.

AS 356

Aircraft Systems and Components (3,0)

3 Credits

A comprehensive study of aircraft systems and components at the technical level. Areas of study include aircraft electrical, hydraulic, fuel, propeller, and auxiliary systems including theory of operation, calculations, and related Federal Aviation Regulations.

Prerequisite: PS 103 or PS 113.

AS 357

Flight Physiology (3,0)

3 Credits

This course explores aero-medical information. Topics include causes, symptoms, prevention, and treatment of flight environment disorders. Altitude effects, spatial disorientation, body heat imbalance, visual anomalies, and psychological factors are included as they relate to pilot performance and survival effectiveness.

Prerequisite: AS 109 or AS 119 or AS 120 or AS 142 or AS 145.

AS 372

Commercial Helicopter Operations (3,0)

3 Credits

The student will develop an in-depth knowledge of helicopter components, functions, systems, aerodynamics, and performance at the commercial pilot level. The student will also gain necessary knowledge on en route flight to include weather, navigation, and regulations. By the end of the course, the student will have met the aeronautical knowledge requirements to take the FAA Commercial Pilot, Rotorcraft-Helicopter written knowledge test.

Prerequisite: AS 252.

AS 378

Environmental Helicopter Operations (3,0)

3 Credits

During this course, the student obtains the foundation for helicopter operations in terrain flight and in varying environmental conditions. The student will be introduced to aspects particular to helicopter flight as it pertains to adverse weather, and day and night environments specifically pertaining to take-off, cruise, and landing. Emphasis will be placed on understanding principles of flight close to the Earth and hazards both natural and man-made. Additional emphasis will be placed on helicopter flight in and around mountains. The student will be exposed to visual references and how to adjust perceptions to maintain safe, low-level flight in and around hazardous conditions present in commercial helicopter operations. By the end of the course, the student will have sufficient knowledge to understand the concepts necessary for employment in the commercial helicopter industry.

Prerequisite: AS 372 or approval of instructor.

Undergraduate Course Descriptions

AS 380

Pilot Career Planning and Interviewing Techniques (1,0)

1 Credit

A course in which students will discuss and develop short-term and long-term job and career goals, conduct career research using various University and industry resources, prepare a personal job search portfolio, prepare resumes and letters of application, and gain insights and proficiency in interviewing skills so they are better prepared to enter the job market upon graduation. Students will participate in simulated interview scenarios, will be expected to correspond with at least one company, and will be involved in the evaluation of letters, resumes, and interviews. This course will be graded Pass/Fail.

Prerequisite: Junior standing or approval of instructor.

AS 387

Crew Resource Management (3,0)

3 Credits

Crew Resource Management (CRM) is a course designed to develop a detailed understanding of the organizational behavior, interpersonal relationships skills, and other critical behavioral dynamics of professional flight crews. The history of CRM, CRM concepts of Communication Processes, Problem Solving, Group Dynamics, Workload Management, and Situational Awareness will be investigated. Aircraft incidents and accidents related to the evolution of CRM training programs and FAA regulations will be analyzed. Intrapersonal and psychomotor skills will be addressed as they relate to safe, legal, and efficient flight operations. (AS 387 is the capstone course for the AMS degree, Area of Concentration in Flight.)

AS 388

Helicopter Flight Planning (3,0)

3 Credits

During this course, the student obtains the foundation for the FARs as they relate to flight planning and navigation for various operations. The student will be able to use regulatory and operations requirements to plan flights. Remote location flight and terrain flight navigation procedures will be studied closely. Cargo planning for internal and/or external loads will also be considered. Communications procedures with internal and external operations nodes during near-ground operations will be discussed. By the end of the course, the student will have sufficient knowledge to understand the concepts necessary for effective flight planning and operation in the commercial helicopter industry.

Prerequisite: AS 372 or approval of instructor.

AS 402

Airline Operations (3,0)

3 Credits

A study of the scope and function of a major air carrier's organizational structure and the specific relationships of the operations department with those of marketing, maintenance, and safety are discussed. A study of corporate issues including the industry in general, market structure, certification, FAR Part 121 regulations, economic issues, mergers, corporate culture, and international topics will be included. From an operational perspective, topics include flight operations employment policies, domiciles, operating specifications, types of services provided, training, passenger considerations, decision making, communications, and pertinent FARs.

AS 403

Unmanned Sensing Systems (3,0)

3 Credits

This capstone course will identify the needs of the users of unmanned aircraft systems. The course will then identify the appropriate sensor package that is available to meet that need, and educate the students on the skills needed to acquire the package; ramifications and limitations of the installation, and how to correctly interpret the results.

Prerequisite: AS 220, PS 114 and U.S. Citizenship required..

AS 405

Aviation Law (3,0)

3 Credits

This course will introduce the advanced student to the U.S. Constitution as well as to federal, state, and local statutes. The student will become familiar with case law and common law and will develop an understanding of the chronological development of these laws and their application to aviation. The student will be introduced to civil law, including tort, product liability, contract, sales, secured credit, property, environmental, and labor laws. Criminal statutory law and government, airman, and operator rights and liabilities will also be studied, as well as international laws and conferences.

Prerequisite: Junior standing.

AS 408

Flight Safety (3,0)

3 Credits

A capstone course designed to assist the student in developing an attitude and philosophy for accident prevention. The course includes ideal and practical, per-

Undergraduate Course Descriptions

sonal and organizational safety procedures and goals; safety philosophies; aircraft accident reports; human factors; principles of accident investigation, accident prevention programs, and accident statistics; current events; and NTSB special studies.

Prerequisite: *Senior standing.*

NOTE: This course cannot be used as a capstone course for students in the Aeronautical Science, Aeronautics or Air Traffic Management degree programs

AS 410

Airline Dispatch Operations (3,0)

3 Credits

This capstone course includes a review of pertinent Federal Aviation Regulations, navigation systems and procedures, manual flight planning, emergency and abnormal procedures, the general operating manual, aircraft systems and performance development, human factors, and practical dispatching applications.

Prerequisites: *WX 301, AS 310, and AS 350.*

Corequisites: *AT 200 and AS 221; or Instrument Rating, or instructor approval.*

NOTE: This course cannot be used as a capstone course for students in the Aeronautical Science, Aeronautics or Air Traffic Management degree programs

AS 411

Jet Transport Systems (3,0)

3 Credits

This course will provide the student with detailed knowledge of complete turbojet systems. The student will be exposed to complex air carrier aircraft systems and will conduct a detailed examination of the B-747-400. Air carrier procedures are examined from a crew member's operational perspective.

Prerequisite: *AS 356, or permission of the instructor.*

AS 412

Corporate and Business Aviation (3,0)

3 Credits

This course is designed to provide the student with an understanding of the operation of a corporate flight department, value of management mobility, aircraft and equipment evaluation, maintenance, flight operations, administration and fiscal considerations.

AS 420

Flight Technique Analysis (3,0)

3 Credits

Application of aerodynamic principles to the development of optimal pilot techniques and procedures. Uniform procedures applicable to all airplanes and special procedures for large, high-performance, and transport aircraft are analyzed, including principles of flight deck resource management.

AS 421

Flight Instructor Ground Course (4,0)

4 Credits

The student will receive training in the maneuvers and procedures necessary for him/her to meet the standards contained in the Flight Instructor practical test standards, Single-Engine Land with Instrument Airplane rating. Additionally, the student will receive training in cockpit resource management and safe flying practices. Associated ground instruction will include completion of the Fundamentals of Instruction, the Flight Instructor Airplane, and the Flight Instructor Instrument written test.

Prerequisite: *FAA Commercial Pilot Certificate with Single-Engine and Instrument Rating (FA 321 or FA 326).*

AS 428

Advanced Helicopter Systems and Functions (3,0)

3 Credits

During this course, the student will study the principles and functions of advanced helicopter systems with an emphasis on automatic flight control systems and associated pilot interface mechanisms, power and rotor systems, avionics, environmental systems, and structures. Prerequisites: AS 252 Instrument Helicopter Operations, AS 311 Turbine Engines.

Prerequisite: *AS 252 and AS 311.*

AS 435

Electronic Flight Management Systems (3,0)

3 Credits

This course teaches the theory and principles governing flight with autopilot and flight management systems. Students will apply theory and principles by demonstrating good decisions and thought processes in autopilot and FMS/PC simulators.

Prerequisite: *AS 350.*

Undergraduate Course Descriptions

AS 438

Advanced Helicopter Operations (3,0)

3 Credits

During this course, the student will obtain the foundation for advanced and specialized commercial helicopter operations. The student will be introduced to specific areas of flight operations such as Long Lines, EMS, Electronic News Gathering, Corporate, Off-Shore, and Federal and Municipal Law Enforcement. Emphasis will be placed on developing a safe and competent pilot who is adequately prepared for flight operations in these areas, and can assume the duties of any managerial position. The student will receive training in standard operating, safety and training procedures, aircraft selection, operating and capital budgets, aircraft purchasing and leasing agreements, and an understanding maintenance requirements to include maintenance tracking, spare parts inventory, and record keeping. By the end of the course, the student will have sufficient knowledge to understand the concepts necessary for employment in the commercial helicopter industry

Prerequisite: AS 372 or approval of instructor.

AS 442

Flight Instructor Helicopter Operations (4,0)

4 Credits

The student will receive the required training in the maneuvers and procedures necessary to meet the standards contained in the Flight Instructor practical test standards, Rotorcraft with instrument rating. Additionally, the student will receive training in cockpit resource management and safe flying practices. Associated ground instruction will include completion of the Fundamentals of Instruction, Flight Instructor Helicopter and the Flight Instrument Helicopter written test.

Prerequisite: AS 372 or FAA Commercial Pilot Certificate with Rotorcraft-Helicopter and Instrument Ratings.

AS 472

Operational Applications in Aeronautical Science (3,0)

3 Credits

This capstone course is designed to be a culminating experience for students in the Aeronautical Science degree program. This course focuses on the professional aspects of a career pilot, industry expectations of those entering the profession, and insights into the real-world application of aeronautical decision making, crew resource management, threat and error management, and airline operations. Life-long learning skills are promoted through the use of team exer-

cises that require students to explore the regulatory and ethical requirements of professional pilots.

Prerequisite: AS 350, AS 387, and senior standing.

Note: Must be taken during the last two semesters before graduation.

AS 473

UAS Flight Simulation (3,0)

3 Credits

This course will include instruction, through lectures and instructional laboratory, of Unmanned Aircraft Systems ground control stations, pilot stations, and sensor operator stations. The course will include the organization of a typical unmanned aircraft ground control station. Using an unmanned aircraft simulator, the instructional lab will include education in the proper use of flight controls, sensor controls, and the human factors interface between personnel, and man/machine.

Prerequisite: AS 235.

Note: An additional lab fee is associated with this course.

AS 199 - 499

Special Topics in Aeronautical Science

1-3 Credits

Individual independent or directed studies of selected topics in general aviation.

Prerequisites: Consent of instructor and approval of department and program chairs. May be repeated with a change of subject. Special topics courses involving flight training are offered in selected areas for the purpose of gaining proficiency in required pilot operations for various certificates and ratings.

Air Traffic Control

AT 200

Air Traffic Management I (3,0)

3 Credits

AT 200 is the entry-level course in the Air Traffic Management (ATM) degree sequence. It is also the first of the courses required in the FAA's Collegiate Training Initiative (CTI) program the FAA is using to meet ATC staffing requirements. This course provides students with a fundamental knowledge of the U.S. air traffic control system and develops content knowledge in the following areas: the Federal Aviation Administration, its mission, organization, and operation; the air traffic control career; navigational aids, current and future; airspace; communications; federal aviation regulations; ATC procedures; control tower

Undergraduate Course Descriptions

operations; non radar operations; radar operations; and future air traffic control systems. The course also provides essential information that is useful for pilots and other aviation professionals.

Prerequisite: AS 109 or AS 119 or AS 120 or AS 142 or AS 145

AT 302

Air Traffic Management II (3,0)

3 Credits

Air Traffic Management II gives the student an introduction to the manuals, procedures, maps, charts, and regulations used by pilots and air traffic controllers in the National Airspace System (NAS). Included is an examination of FAA Orders, the Aeronautical Information Manual (AIM), and Federal Air Regulations (FARs). Students will also acquire basic knowledge about SIDs, STARs, en route IFR charts, and instrument approaches. Search and rescue, special operations, NOTAMS, and teamwork in the ATC environment are also studied in this course.

AT 305

Air Traffic Management III (3,0)

3 Credits

This course covers the basic air traffic control (ATC) procedures for instrument flight rules (IFR) in terminal ATC facilities in the National Airspace System (NAS). Knowledge and skill requirements for air traffic control specialists (ATCs) in the current ATC system are studied in the classroom and practiced in a realistic, performance-based laboratory environment. Duties and responsibilities of the Tracon air traffic controller are integrated into an understanding of how the total ATC system works. Classroom delivery is augmented by practical laboratory problems using an air traffic control simulation of terminal radar operations.

Prerequisite: AT 200 and AT 302

Note: An additional lab fees is associated with this course.

AT 315

Air Traffic Management-VFR Tower (1,2)

3 Credits

AT 315 is the air traffic control VFR Tower segment in the Air Traffic Management (ATM) degree sequence. This course provides students with a fundamental knowledge of VFR Tower terminal operations in the U.S. air traffic control system and develops content knowledge in the following areas: control tower equipment and operating positions; the airport traffic area; navigation aids; airspace; VFR traffic patterns; controller/pilot phraseology; aircraft taxi instructions; control of vehicle movement; interagency communi-

cations and intrafacility coordination; federal aviation regulations; notification and handling of emergency aircraft; flight progress strip marking; aircraft recognition and characteristics; limited weather observations; airport lighting systems; wake turbulence and its effects on arriving/departing aircraft; VFR and IFR ATC procedures; runway incursions; using ATIS; reporting RVR/RCR; determining prevailing visibility using visual reference; NOTAMS; and criteria for runway selection. The course also provides essential information that is useful for pilots and other aviation professionals.

Prerequisite: AT 302.

Note: An additional lab fee is associated with this course.

AT 401

Air Traffic Management IV (2,3)

3 Credits

This course integrates the knowledge of air traffic control gained in previous air traffic control courses with an opportunity to actually “work” air traffic control operating positions. Using a realistic air traffic control simulation, students issue instructions to aircraft, make hand-offs, coordinate with other controllers, solve aircraft confliction problems, and do other controller tasks. Making “real-time” decisions, determining strategies for controlling aircraft, and working with a dynamic scenario are features unique to this learning experience. This course combines classroom discussion and group and team coordination with various forms of evaluation for course credit. Student competency in the performance phase of the course is determined by computer scoring.

Prerequisites: AT 200, AT 305.

Note: An additional lab fees is associated with this course.

AT 405

Air Traffic Management V (2,3)

3 Credits

This course expands on the skills, knowledge, and abilities the student has acquired in previous ATC classes. AT 405 presents more demanding and complex traffic scenarios requiring higher-level performance and decision-making skills and prepares the student for initial training in any ATC specialization. Students will also gain an appreciation for the challenges of implementing large-scale changes in the National Airspace System. Upon successful completion of this course, students will demonstrate the knowledge and technical aptitude required for entry-level qualification as an air traffic control specialist.

Prerequisites: AT 200, AT 305, AT 401.

Note: An additional lab fee is associated with this course.

Undergraduate Course Descriptions

AT 406

Air Traffic Management VI

3 Credits

This course introduces students to the non-radar procedures and minima prescribed in FAAH 7110.65 and builds on knowledge gained in prerequisite courses. Training includes the vertical, lateral, and longitudinal separation of aircraft in the departure, en route, and arrival phases of flight. Phraseology, strip marking, instrument/visual approaches, and the coordination procedures necessary to operate in an en route non-radar environment will be covered. Students will work a number of air traffic control scenarios and demonstrate higher-level performance and decision-making skills required for entry-level qualification as an air traffic control specialist.

Prerequisites: AT 200, AT 305, AT 401, AT 405.

Note: An additional lab fee is associated with this course.

Business Administration

BA 102

Introduction to Aviation Business and Industry (3,0)

3 Credits

In this course, students gain the skills and strategies necessary for success in balancing student life and academics, while also being introduced to relevant business principles and practices associated with the aviation industry. To facilitate their development as an eventual aviation professional, students are familiarized with the common body of knowledge in aviation and learn about career planning; aircraft design, performance, operating characteristics, and maintenance; aviation safety and human factors; national and international laws/regulations; meteorology and environmental issues. Students explore current issues in the aviation industry and are introduced to airports, air cargo, ground operations, aircraft/engine manufacturers, regulatory agencies, military aviation, and general aviation.

BA 201

Principles of Management (3,0)

3 Credits

Provides an overview of relevant management principles and practices as applied in contemporary organizations. Focuses on management theories, philosophies, and functions.

BA 210

Financial Accounting (3,0)

3 Credits

An introduction to accounting information systems and financial reports, including accounting concepts and analysis and interpretation of financial reports with an emphasis on the operating activities of aviation-related businesses.

BA 221

Advanced Computer-Based Systems (3,0)

3 Credits

This course is a continuation of BA 120. It covers advanced concepts of spreadsheet use, database management systems, presentation graphics and Internet usage that will assist in problem analysis, worksheet management and exchanging spreadsheet data with other programs. It introduces the student to project planning, project scheduling and project tracking using computer software. In addition, the course provides experience in the basics of retrieving graphical and text-based information and also explores webpage design and development to support management activities.

Prerequisite: IT 109 or permission of instructor.

BA 308

Public Administration (3,0)

3 Credits

Public administrators and characteristics of public sector organizations are discussed. This course explores the impact of political processes and public pressures on administrative action, the role of regulatory agencies, and responsibilities of public administrators including human resource management, governmental budgeting, intergovernmental relations, and participation in the policy making process. Also discussed are the qualifications of public administrator and the unique challenges faced by government officials.

Prerequisites: BA 201.

BA 309

Government Acquisitions and Contracting (3,0)

3 Credits

This course will provide an analysis of Government contracting regulations and contract administration/management procedures, with particular emphasis on the Federal Acquisition Regulation (FAR) and the Department of Defense Regulation Supplement (DFARS), and the practical application of the FAR and DFARS in Government and Industry contract administration/management roles.

Undergraduate Course Descriptions

BA 311

Marketing (3,0)

3 Credits

This course centers on marketing theory, marketing management, sales management, and marketing research. In addition, public and customer relations, advertising, and distribution will be explored.

BA 312

Managerial Accounting (3,0)

3 Credits

Emphasizes management's use of cost information in internal decision-making. Decision-making processes include cost analysis, control, allocation, and planning. A variety of accounting techniques applicable to aviation/aerospace companies are presented.

Prerequisite: BA 210.

BA 319

Managerial and Organizational Behavior (3,0)

3 Credits

This course will examine the functions to be accomplished in effectively exploring managerial and organizational behavior. A study of the interrelationship of staff managers, specialists, and line managers will assist the student in understanding and applying management theories to real-world human resource planning and execution. Areas of concentration include human resource planning; recruitment and selection, training and development; compensation; safety and health; labor relations; and understanding individual, group, team, and social processes. Special attention is devoted to how technology has shaped the modern work environment.

Prerequisite: BA 201.

BA 320

Business Information Systems (3,0)

3 Credits

A management approach to understanding business information systems. The general characteristics, potential, and limitations of business systems are covered. The major emphasis is on understanding the inputs, processing, and outputs of a variety of business systems; the ways in which business systems are interrelated and the inherent management problems involved in the implementation and control of such systems.

Prerequisite: BA 221

BA 322

Aviation Insurance (3,0)

3 Credits

An introduction to the basic principles of insurance and risk with its special application to the aviation industry. An in-depth review of the aviation insurance industry in the U.S., including the market and types of aviation insurers.

Prerequisite: Sophomore standing.

BA 324

Aviation Labor Relations (3,0)

3 Credits

An investigation of labor-management relations in the aviation industry. Examined are the history of unionism, structure of unions, legal environment and the Railway Labor Act, collective bargaining, public sector relationships, grievance procedures, and conflict resolution.

BA 325

Social Responsibility and Ethics in Management (3,0)

3 Credits

A comprehensive inquiry into the major components of social responsibility including economic, legal, political, ethical, and societal issues involving the interaction of business, government, and society.

Prerequisite: BA 201.

BA 332

Corporate Finance I (3,0)

3 Credits

The finance function as used by management, including financial analysis and control financial planning; and short, intermediate, and long-term financing, using the theory of cost of capital and leverage in planning financial strategies. Aviation-related businesses are emphasized.

Prerequisite: BA 210.

BA 333

Personal Financial Planning (3,0)

3 Credits

The nature of the personal financial planning process is examined. Areas of concentration include taxes, investments, purchase of housing/auto, insurance needs and analysis, use of credit, and retirement and estate planning. Students will develop a personal financial plan.

Undergraduate Course Descriptions

BA 334

Investment Analysis (3,0)

3 Credits

This course is an introduction to the field of investments. The course is designed as a guide for people studying the capital markets for the first time. The course provides a survey of investments including security markets, investment vehicles, investment analysis, and portfolio management. Specific topics include the concept of risk and return, types of financial instruments, study of how they are bought and sold, an introduction to how they are valued in the marketplace, a survey of investment companies, asset allocation, concept of efficient markets, equity and bond portfolio management, portfolio performance evaluation, fiduciary responsibility and ethical conduct in the investment profession, and corporate governance. The course is taught from the viewpoint of an individual rather than an institutional investor. The course uses current economic and capital market information for a practical application of the course materials.

Prerequisites: BA 332.

BA 335

International Business (3,0)

3 Credits

An analysis of economic development and international trade in modern times, with an examination of current U.S. relations with other nations. Attention will be focused on the impact of foreign trade on the aviation industry and the industry's contribution to economic development.

Prerequisites: BA 201.

BA 342

International Finance (3,0)

3 Credits

The purpose of this course is to provide the analytical framework required for understanding how changes in international financial conditions influence decisions faced by modern business leaders in a global setting. The focus will be on interactions between cross-border trade and capital flows, inflation, interest rates, exchange rates, monetary and fiscal policy, and economic growth. Exchange rate regimes, exchange rate risk and hedging, global capital budgeting, short-term and long-term financing of multinational enterprise, and managing multinational operations will also be explored. The course is tailored to students seeking careers in global banking and investment or with finance and strategy departments of aviation operating enterprise in global markets.

BA 390

Business Law (3,0)

3 Credits

A survey of the legal aspects of business transactions. Areas covered include contracts, agency, bailment, negotiable instruments, partnerships, corporations, consumer credit, and the government's influence on business law.

BA 408

Airport Management (3,0)

3 Credits

This course examines the management and operation of US commercial service airports, including an introduction to airport system facilities (landside, terminal, airside and airspace). Developmental legislation, regulations, funding programs and obligations are discussed. Also presented are the unique challenges and opportunities encountered by airport managers including those relating to safety, security, ground transportation, maintenance, environmental issues, master planning, community relations, and emerging technologies.

Prerequisites: BA 201.

BA 410

Management of Air Cargo (3,0)

3 Credits

Intensive study of the practices and problems of management with respect to air cargo. Importance of air cargo service to the economy, rate and tariff problems, terminal facilities, competition, and future prospects.

Prerequisites: BA 201.

BA 415

Airline Management (3,0)

3 Credits

An introduction to the administrative aspects of airline operation and management. Topics include the annual profit plan, uniform system of accounts and reports, demand analysis, scheduling, the theory of pricing, fleet planning, facilities planning, and airline financing.

Prerequisite: BA 201.

BA 418

Airport Administration and Finance (3,0)

3 Credits

An advanced study of the organizational, political, and financial administration of public and private civil use airports. Areas of emphasis include public relations management, safety and security issues, employee organizational structures, financial and

Undergraduate Course Descriptions

accounting strategies, revenue and expense sources, economic impacts of airport operations, airport performance measurement standards, and current trends and issues of direct concern to airport administrators.

Prerequisite: BA 408 and junior standing.

BA 420

Management of Production and Operations (3,0)

3 Credits

An intensive study of management in all organizations: service oriented and product oriented. Scheduling, inventory control procurement, quality control, and safety are investigated. Particular attention is given to applications of aviation-oriented activities.

Prerequisites: MA 222 and Junior standing.

BA 421

Small Business Management (3,0)

3 Credits

An analysis of the theoretical and practical knowledge necessary to be successful in conceiving, initiating, organizing, and operating a small business. Special focus will be placed on small businesses in the aviation field.

Prerequisite: BA 201 and BA 210

BA 425

Trends and Current Problems in Air Transportation (3,0)

3 Credits

Analysis of selected contemporary issues, problems, and trends facing management in various segments of the aviation industry, including general aviation and the airlines. Students apply previously learned concepts to practical problems to develop increased understanding and demonstrate knowledge of the subject.

Prerequisites: BA 201.

BA 427

Management of the Multicultural Workforce (3,0)

3 Credits

An investigation into the management of the multicultural workforce. The elements of cultural anthropology and international business, communicating across cultures, contrasting cultural values, and managing and maintaining organizational culture are addressed in the context of international aviation management.

Prerequisites: BA 201.

BA 430

International Trade and Regulations (3,0)

3 Credits

Economic analysis of international trade, capital flows, and labor migration with particular emphasis on the laws governing these factors. Aviation applications include code-sharing and other international airline agreements and the impact of trade subsidies and open skies treaties.

Prerequisites: EC 210.

BA 434

Corporate Finance II (3,0)

3 Credits

The objective of this course is to study the major decision-making areas of managerial finance and some selected topics in financial theory. The course reviews the theory and empirical evidence related to the investment and financing policies of the firm and attempts to develop decision-making ability in these areas. This course serves as a complement and supplement to Corporate Finance I. Topics include leasing, dividend policy, mergers and acquisitions, corporate reorganizations, financial planning, working capital management, and international finance. Aviation and aerospace related businesses are emphasized.

Prerequisite: BA 332.

BA 436

Strategic Management (3,0)

3 Credits

This business capstone course examines strategic management principles involving strategy, formulation, implementation, evaluation, and organization analysis. Case analysis employing strategic management principles is used to examine and solve organization problems. Total quality management concepts are studied for improvement of organizational effectiveness.

Prerequisites: Senior standing and ABA degree program.

BA 299 - 499

Special Topics in Management

1-4 Credits

Individual independent or directed studies of selected topics in management.

Prerequisites: Consent of the instructor and approval of the department chair. May be repeated with change of content.

Cooperative Education

CE 396, 397, 398

1-6 Credits

Aerospace Engineering (AE), Aeronautics (A), Aeronautical Science (AS), Aviation Business Administration (ABA), Aviation Environmental Science (AES), Computer Engineering (CEC), Computer Science (CS), Electrical Engineering (EE), Global Security and Intelligence Studies (GSIS), Interdisciplinary Studies (IS), Mechanical Engineering (ME), Meteorology (WX), Space Physics (SP). Provides practical learning experience in full-time or part-time employment related to the student's degree program and career goals. Course title and level are based on the work assignment.

Prerequisite: Approval by the department chair and Career Services Director.

NOTE: Cooperative Education and internship experiences are designed as academically based experiential education. A student enrolled in a University-approved co-op/internship professional activity and registered for six credit hours will be considered full-time by all University departments other than Financial Aid. The Financial Aid Office will consider a six-hour co-op/internship as half-time enrollment and will process financial aid awards and reporting to outside agencies accordingly.

CE 496, 497, 498

1-6 Credits

Continuation of CE 396, 397, 398

Computer Engineering

CEC 220

Digital Circuit Design (3,0)

3 Credits

Introduction to logic design and interfacing digital circuits. Boolean algebra, combinatorial logic circuits, digital multiplexers, circuit minimization techniques, flip-flop storage elements, shift registers, counting devices, and sequential logic circuits.

Corequisite: CEC 222.

EC 222

Digital Circuit Laboratory (0,3)

1 Credit

Laboratory experiments in the measurement and verification of digital circuits. Discrete and integrated logic circuit design analysis and measurements.

Corequisite: CEC 220.

CEC 320

Microprocessor Systems (3,0)

3 Credits

Study of digital computer organizations. Introduction to microcomputer systems using a current microprocessor. Assembly language programming techniques for microcomputers will be used to study digital computer operation. Input and output techniques, memory devices, RS 232, and other interfacing techniques will be studied. Hardware and software relationships will also be discussed.

Prerequisites: CEC 220, CS 125.

Corequisite: CEC 322.

CEC 322

Microprocessor Systems Laboratory (0,3)

1 Credit

Hands-on experience with a microprocessor is provided through weekly experiments involving hardware and software techniques.

Corequisite: CEC 320.

CEC 420

Computer Systems Design I (2,3)

3 Credits

This is the first course in the senior project sequence (CEC 420 and CEC 421). This course introduces students to discussing issues of management, planning, task assignment, resource allocation, requirement collection, and system specification and design. The team working in a distributed environment will develop a base for implementation of a computer-centered system with elements of both hardware and software. The artifacts developed during this course will be used as the foundation for further development during the second course (CEC 421) in the sequence.

Prerequisites: CEC 320, CEC 322.

Corequisite: EE 401.

Undergraduate Course Descriptions

CEC 421

Computer Systems Design II (1,6)

3 Credits

This is the second course in the senior project sequence (CEC 420 and CEC 421). This course continues with project development, focusing on issues of detailed design, modularization, component selection, coding, assembling, and testing. The team working in a distributed environment will implement and test a computer-centered system with elements of both hardware and software.

Prerequisites: CEC 420, EE 401.

CEC 450

Real-Time Systems (3,0)

3 Credits

The course introduces the concepts of real-time systems from the user and designer viewpoint. The requirements, design, implementation, and basic properties of real-time application software are described with an overview of system software. Related topics such as interrupts, concurrent task synchronization, sharing resources, and software reliability are discussed. A team project on a real-time prototype application may be incorporated in the course.

Prerequisites: CEC 320, CEC 322, CS 420.

CEC 460

Telecommunications Systems (3,0)

3 Credits

Techniques and applications in telecommunications. Types of data communication versus line discipline methodology. Hardware requirements and constraints. Speed versus quality. Security and encoding algorithms.

Prerequisite: CEC 320, CEC 322.

CEC 470

Computer Architecture (3,0)

3 Credits

This course describes in detail the Von Neuman computer architecture, which includes processors, memory, input/output, and transfer of information. Examples of machine language, assembly language, microprogramming, and operating system will be discussed. Additional topics in advanced computer architectures and computer systems will be covered.

Prerequisites: CEC 320, CEC 322.

CEC 299 - 499

Special Topics in Computer Engineering

1-6 Credits

Directed studies of selected topics in computer engineering.

Prerequisite: Consent of instructor and department chair.

Communication

COM 020

Fundamentals of Communication (4,0)

4 Credits

This course is designed to improve the students' reading and writing abilities through focusing on critical thinking. All three skills are approached as facets of each other and as processes which the students learn to control and take responsibility for. The fundamentals of grammar, punctuation, and sentence structure are strengthened when students write and revise multi-paragraph expository essays. (A grade of C or above is required to pass this course and it may not be dropped. Credit is not applicable to any degree.)

COM 122

English Composition and Literature (3,0)

3 Credits

This course focuses on the principles of using writing for thinking, as well as a tool for expressing ideas. It addresses the composing process, research and documentation, and rhetorical strategies for various audiences and purposes. Students develop their communicative, evaluative, critical thinking, and research writing abilities.

Prerequisite: Satisfactory completion of basic skills requirements.

COM 219

Speech (3,0)

3 Credits

A continuation of the study of communication and communication theory with emphasis on overcoming communication apprehension, developing listening skills, mastering oral performance, and writing about communication. Individual sections may focus on public speaking, group discussion, oral interpretation, or interpersonal communication. Section emphasis varies by instructor and is listed in the Schedule of Courses.

Prerequisite: COM 122.

Undergraduate Course Descriptions

COM 221

Technical Report Writing (3,0)

3 Credits

This course introduces students to the preparation of formal and informal technical reports, abstracts, proposals, instructions, professional correspondence and other forms of technical communication. Major emphasis is placed on the long technical report and the acquisition of advanced writing skills.

Prerequisite: Any course from the HU 140 series.

COM 222

Business Communication (3,0)

3 Credits

An introduction to effective business communication. Topics in oral, written, nonverbal, and intercultural communication are covered. Research methods, effective speaking, and the preparation of letters, memoranda, and reports are emphasized.

Prerequisite: Any course from the HU 140 series.

COM 223

Intelligence Writing (3,0)

3 Credits

The purpose of this course is to teach the basic skills of intelligence writing. The most essential principle of intelligence writing is to communicate to the reader exactly the message the analyst wants to communicate. Clarity, precision, accuracy, and brevity are key elements of intelligence writing, but also crucial is the overall structure of the intelligence brief. Two further elements are part of the intelligence writing process: a capacity to accurately evaluate information and an ability to make analytical judgments about the significance of a development. All these elements will be covered intensively as part of the intelligence writing process.

Prerequisite: Any course from the HU 140 series.

COM 225

Science and Technology Communication (3,0)

3 Credits

This course introduces the practices of communicating news and issues in science and technology to a variety of publics through magazine-style writing and public speaking. Guest speakers will present research questions, methodologies, and issues within the sciences. Coursework also includes readings from successful science and technology communicators, illustrating various solutions to writing about complex subjects. Special topics include identifying science and technological stories, evaluating sources

and information, and communicating findings clearly, comprehensibly, and accurately for publication and speaking engagements.

Prerequisite: COM 221.

COM 230

Digital Photography (3,0)

3 Credits

This course introduces fundamental photographic skills through digital technologies. Emphasis is placed on the tools, techniques, and aesthetics of a range of photographic applications pertaining to graphic design and interactive media.

Prerequisite: Sophomore standing or permission of the program coordinator.

COM 260

Introduction to Media (3,0)

3 Credits

The structure of, professional opportunities in, and social issues arising from media industries. Required of all Communication students. Must be taken within the first year of entering the program.

Prerequisite: COM 122.

COM 320

Mass Communication Law and Ethics (3,0)

3 Credits

This course is based on case studies introducing students to the legal and ethical environments underpinning First Amendment rights in the United States from the nation's founding to the present. Topics in law include intents of the framers, prior restraint, libel, privacy, hate speech, freedom of information laws, shield laws, and copyright. Topics in ethics concentrate on models for decision-making in difficult situations. Practices of journalists, media relations practitioners, and Internet communicators will be examined. Topics in ethics concentrate on models for decision-making in difficult situations.

Prerequisite: COM 221.

COM 322

Aviation and Aerospace Communication (3,0)

3 Credits

This course introduces the practices of communicating news and issues in aviation and aerospace to a variety of publics through magazine-style writing and public speaking. Students will learn how to recognize the news value of contemporary aviation issues, to gain an understanding of those issues through research and interviews with experts, and to write about and discuss the issues. Coursework also

Undergraduate Course Descriptions

includes readings from respected aviation writers that illustrate aviation's economic and social impact on society. Special topics include safety, airport security and congestion, emerging legal issues, and international aviation trends.

Prerequisite: COM 221.

COM 350

Environmental Communication (3,0)

3 Credits

This course centers on national and regional environmental issues, including planning, regulation, and crises. Topics include responses to climate change, endangered species, wetlands preservation, coastal development, and hazardous materials regulation. Field trips and guest speakers will be included. Students learn how to research and write articles and stories for nature and environmental magazines as well as general-audience media.

Prerequisite: COM 221 or COM 225.

COM 351

Journalism (3,0)

3 Credits

Theory and practice of the techniques of journalism, familiarizing the student with the functions, skills, and responsibilities required in writing, editing, and producing news and technical publications.

Prerequisite: Any course from the HU 140 series.

COM 410

Advanced Professional Writing (3,0)

3 Credits

A sophisticated process approach to strategies for effective communication in the workplace. Balancing theory and practice in professional communication, students will work singly and in collaborative teams to integrate visuals, layout and design, editing and review systems, online documentation, and electronic publishing. All assignments carry written components with equal emphasis placed on oral execution.

Prerequisites: COM 219, and either COM 221, COM 222, or COM 223.

COM 411

Web Design Workshop (3,0)

3 Credits

In addition to highlighting theories of communication related to design and content, this course serves as a practical workshop in Web site development, with an emphasis on communicating science and technology in a professional context. In close consultation with the professor, students design and produce Web sites for University programs, departments, non-profit organi-

zations, and businesses. Experience with Web development software is recommended.

Prerequisites: COM 221, COM 222, or an equivalent professional writing course.

COM 412

Advanced Technical Writing (3,0)

3 Credits

Communication specific to the technical communication profession is studied, and students prepare at least one formal project suitable for inclusion in a career portfolio. The projects may include, but are not limited to, the following: technical manual, grant or business proposal, product development and documentation, multimedia training or product presentation, training modules, and corporate reports. Projects may be in paper, electronic, or combination of multimedia formats, depending on trends in the profession and use of technology. Professional technical communicators may serve as mentors or speakers.

Prerequisite: COM 221.

COM 415

Non-Verbal Communication (3,0)

3 Credits

This course entails the study of communication behaviors and processes not involving the expression of written or spoken words, which contribute information to a message. Special attention is directed to the study of voice qualities; facial expression and body language; space, personal distance, and touch; the use of time and objects; and personal appearance. Study also involves non-verbal communication in applied settings, as well as research strategies for observing, measuring, and understanding non-verbal phenomena.

Prerequisites: COM 219, equivalent Speech Communications course. (Also offered as HU 415. Students receive either Communication or Humanities credit, but not both.)

COM 420

Advanced Technical Communications I (1,0)

1 Credit

A study of applied technical communication with emphasis on communication standards of the aerospace industry, including participating in meetings, conducting informal briefings, resolving interpersonal conflicts, writing varied technical documents and making formal presentations. Section emphasis varies by instructor.

Prerequisite: COM 221.

Corequisite: This course must be taken concurrently with Preliminary Design courses offered by the AE\ME programs.

Undergraduate Course Descriptions

COM 430

Advanced Technical Communications II (2,0)
2 Credit

A continuation of Advanced Technical Communication I, this course focuses on informal and formal technical reports and briefings. Major emphasis is placed on public speaking and formal writing skills according to aerospace industry standards. Section emphasis varies by instructor.

Prerequisite: COM 420.

Corequisite: This course must be taken concurrently with Detail Design courses offered by the AE\ME programs.

COM 440

Senior Employment Practicum (1,0)
1 Credit

Open only to Communication majors. Preparation and evaluation of resumes, employment correspondence, portfolios, and mock employment interviews. Must be taken the semester after completing 88 hours.

Prerequisite: COM 265.

Computer Science

CS 118

Fundamentals of Computer Programming (3,0)
3 Credits

Introduction to basic concepts of structured programming with applications in business, technology, and engineering. This course is intended for the student with little or no experience in programming.

CS 125

Computer Science I (3,3)
4 Credits

Introduction to problem-solving methods, algorithm development, and software engineering; software development process, program design, coding, review, testing, and documentation; and programming using a modern programming language that supports modular development. The course has a closed laboratory that includes activities dealing with the computing environment, the software development process, and programming exercises.

Prerequisite: Proficiency in high school pre-Calculus mathematics and EGR 115 or experience in programming in a high level language.

CS 213

Introduction to Computer Networks (3,0)
3 Credits

This course will focus on the principles and practice of computer networking, with emphasis on the Internet. The students will learn the structure and components of computer networks, packet switching, layered architectures, TCP/IP, physical layer, error control, window flow control, local area networks (Ethernet, Token Ring, FDDI), network layer, congestion control, quality of service, and multicast.

Prerequisite: CS 125 or permission of the instructor.

CS 222

Introduction to Discrete Structures (3,0)
3 Credits

An introduction to the fundamental algebraic, logical, and combinatorial concepts of mathematics that provide a foundation for the study of computer science.

Prerequisites: Experience in programming in a high-level language, pre-Calculus mathematics.

CS 225

Computer Science II (3,3)
4 Credits

This course emphasizes program design, style, data abstraction, information hiding, and testing; advanced programming features; and introduction to object-oriented concepts, basics of algorithm analysis, exception handling, string processing, recursion, pointers, and simple data structures. The course has a closed laboratory that includes activities dealing with the computing environment, the software development process, and programming exercises.

Prerequisite: CS 125.

CS 235

Assembly Language Programming (3,0)
3 Credits

Introduction to computer architecture; assembler concepts and instruction format; addressing techniques; interrupt processing, especially input/output; segmentation, linkage, and external procedures; programming projects to develop understanding of assembly language concepts.

Prerequisites: CS 220, CS 125.

Undergraduate Course Descriptions

CS 303

Network Security (3,0)

3 Credits

This course introduces the principles and algorithms of modern encryption and some major issues and problems of computer security. Topics covered include the notion of block ciphers and implementations such as DES and Blowfish. Modern public key encryption techniques such as the RSA algorithm. Statistical attacks on encryption including traffic monitoring. Hash functions. Digital signatures and authentication methods. An introduction to some attacks and defenses such as viruses, worms, and firewalls. This course is intended to be a required course in an Information Security minor or a technical elective for students majoring in Computer Science or Computer Engineering.

Prerequisites: MA 242 or CS 222 or consent of the instructor. CS 225 or consent of the instructor. Junior status or consent of the instructor.

CS 304

Introduction to Computer Forensics (3,0)

3 Credits

This course will give participants an introduction to the necessary skills to identify an intruders footprints and to properly gather the necessary evidence to prosecute. The basic methodologies and techniques of forensics will be discussed during this course. This course is for individuals and organizations interested in an overview of the knowledge and skills needed to identify, track, and prosecute the cyber-criminal.

Prerequisite: CS 125.

CS 305

Database Systems and Data Mining (3,0)

3 Credits

Introduction to database systems and data mining. The course will cover the relevant theory of database systems, the usefulness of data mining, and the examination of current data mining efforts. Assignments, papers, and projects will reflect real-life use of data mining and provide perspective for managing data mining activities.

Prerequisite: CS 225.

CS 308

Practicum (3,0)

3 Credits

This capstone project course is individualized to each student and uses most facets of their prior instruction.

Prerequisite: All other courses required in the computer applications minor.

CS 315

Data Structures and Analysis of Algorithms (3,0)

3 Credits

This course emphasizes the design, implementation, and analysis of algorithms dealing with searching, sorting, graphs, trees, and disk files.

Prerequisites: CS 125, CS 222.

CS 317

Files and Database Systems (3,0)

3 Credits

Introduction to file and database systems. The course will cover the theory of database systems, various database models, and the design of a database system. Course homework will reflect real-life problems requiring cooperation, problem formulation, and problem-solving skills. A team/group term project may be assigned.

Prerequisites: CS 222, CS 225.

CS 325

Programming in ADA (3,0)

3 Credits

Advanced systems concepts using the ADA language to implement software engineering, concurrent programming, and structured design techniques.

Prerequisites: CS 210, CS 225, or permission of the instructor.

CS 332

Organization of Programming Languages (3,0)

3 Credits

A comparative study of different programming paradigms. Students program in several languages chosen to illustrate the essential features of the paradigms studied. Formal language concepts are also introduced.

Prerequisites: CS 222, CS 225.

CS 335

Introduction to Computer Graphics (3,0)

3 Credits

Introduction to computer graphics, algorithms, graphics programming, graphics design, use of graphic packages, and applications of computer graphics to aviation, business, and scientific problems. A term project involving a graphics programming application may be assigned.

Prerequisites: MA 241 and a proficiency in implementation language.

Undergraduate Course Descriptions

CS 350

Computer Modeling and Simulation (3,0)

3 Credits

Introduction to the basic aspects of modeling and simulation. Topics include statistical models, queuing theory, random variate generation, simulation languages, object-oriented programming, graphic output with animation, design and analysis of experiments, and verification and validation of simulation models. A term project involving the simulation of an element of aviation or aerospace may be assigned.

Prerequisites: MA 222 or MA 412, a proficiency in computer programming, and junior/senior standing.

CS 375

Algorithms (3,0)

3 Credits

This course covers strategies, mathematics, implementations, and performance properties of fundamental algorithms employed in computer science.

Prerequisites: CS 315 and MA 242 or permission of instructor.

CS 415

Human-Computer Interfaces (3,0)

3 Credits

This course introduces Computer Science students to several important aspects of how humans use computers and how software is designed for usability. Students are introduced to usability issues, graphical systems, and graphical interfaces.

Prerequisite: SE 320 or permission of the instructor.

CS 420

Operating Systems (3,0)

3 Credits

Development, structure, and functions of operating systems; demand service models; development of concurrent models.

Prerequisites: CS 125 and junior standing.

CS 425

Net-Centric Computing (3,0)

3 Credits

This course introduces Computer Science students and other engineering majors to areas of software and computer science that pertain to networks and network-based computation.

Prerequisites: CEC 320 and CS 317 or permission of instructor.

CS 432

Information and Computer Security (3,0)

3 Credits

The course will start with an overview of the larger context of information security, including the “softer” aspects of personnel and operational security, and then delve into the technical basis and practical difficulties of COMPUSEC itself. This course is intended to be a required course in an Information Security minor or a technical elective for students majoring in Computer Science or Computer Engineering.

Prerequisites: CS 420 or consent of the instructor. Junior status or consent of the instructor.

CS 455

Artificial Intelligence (3,0)

3 Credits

This course introduces students to the basic concepts of artificial intelligence with emphasis on knowledge engineering. Students gain experience through individual and group exercises in the various phases of system development: planning, requirements and specification, design, implementation, and testing. Students study and apply commercial tools to the development of knowledge-base systems in the aerospace and aviation domain.

Prerequisite: CS 222 or permission of instructor.

CS 299 - 499

Special Topics in Computer Science

1-6 Credits

Individual independent or directed studies of selected topics in computer science.

Prerequisites: Consent of the instructor and the department chair.

Economics

EC 210

Microeconomics (3,0)

3 Credits

An introduction to the economic principles of free enterprise supply and demand, private and social implications of profit maximization, market structure, and resource markets. Current microeconomic issues in aviation (such as liability reform, evolution of airline competition, etc.) are discussed.

Undergraduate Course Descriptions

EC 211

Macroeconomics (3,0)

3 Credits

An introductory analysis of employment, inflation, recession, GDP economic growth, and international trade with an emphasis on practical policy alternatives. Macroeconomic aviation applications such as the counter-cyclical growth of start-up airlines and consideration of ATC privatization are incorporated.

EC 225

Engineering Economics (3,0)

3 Credits

An introduction to microeconomic principles, problems, and policies as well as basic financial principles such as time value of money, capital budgeting, and cost of capital. The course will provide the engineering graduate with the tools needed for success in the workplace.

Prerequisite: MA 241 or equivalent.

EC 312

Money and Banking (3,0)

3 Credits

A preliminary investigation of the financial institutions of the U.S. and the relationship of monetary policy to income and price stabilization. Some analysis of international capital flows will also be undertaken.

Prerequisite: EC 210.

EC 315

Managerial Economics (3,0)

3 Credits

This course presents an analytical approach to the manager's role in understanding pricing, costing, production and forecasting. This course emphasizes the quantitative and qualitative applications of economic principles to business analysis and concentrates on simple quantitative models to explain the firm's position in the market and how the manager can react to and control information. Aviation related topics commonly discussed include airport privatization, employee ownership of airlines, forecasting passenger demand, airline production and cost analysis, optimal pricing and production decisions, sensitivity analysis, and capital budgeting.

Prerequisite: EC 210.

EC 420

Economics of Air Transportation (3,0)

3 Credits

A study of the economic aspects of airline service with consideration given to the impact of federal aid and regulation, types of aircraft, airport problems, consumer interests, and competitive practices.

Prerequisite: EC 210.

EC 299 - 499

Special Topics in Economics

1-4 Credits

Individual independent or directed studies of combinations of selected topics in economics.

Prerequisite: Consent of the instructor and the department chair.

Electrical Engineering

EE 223

Linear Circuits Analysis I (3,0)

3 Credits

Volt-ampere characteristics for passive circuit elements, resistive network circuit theory, and simplification. Kirchoff's current and voltage laws. Introduction to linear network theorems and transformations. Transient response of RC, RL, and RLC circuits. Steady state and impedance circuit analysis for sinusoidal sources.

Corequisites: EE 224, MA 345, PS 250.

EE 224

Electrical Engineering Laboratory I (0,3)

1 Credit

Problem sessions, electrical instrumentation and measurement, verification of theory presented in EE 223, working knowledge of electronic test equipment.

Corequisite: EE 223.

EE 302

Electronic Devices and Circuits (3,0)

3 Credits

Introduction to basic semiconductor theory and semiconductor device characteristics. Diode and transistor models used in the analysis and design of electronic circuits. Basic amplifier circuits. Single and multi-stage amplifier analysis, design, and frequency response. Integrated circuit implementation of differential stages and operational amplifier circuits.

Prerequisite: EE 223.

Corequisite: EE 304.

Undergraduate Course Descriptions

EE 304

Electronic Circuits Laboratory (0,3)

1 Credit

Laboratory experiments in the measurement of electronic device characteristics. Design of biasing networks, small signal amplifiers, and switching circuits.

Corequisite: EE 302.

EE 309

Signal and Linear System Analysis (4,0)

4 Credits

This course includes discussions of signals and systems, convolution, continuous time signals, spectra of continuous time signals, time-domain and spectral analysis of continuous time signals, Laplace transforms, discrete time signals, spectra of discrete time signals, time-domain and spectral analysis of discrete time signals, and the Z-transform.

Prerequisite: EE 223.

Corequisite: MA 441.

EE 335

Electrical Engineering I (2,0)

2 Credits

Introduction of the fundamentals of electrical engineering. Circuit theory and variables. Voltage-current relationship for passive elements. Circuit analysis and network solutions. Phasors and frequency-domain analysis. Transient analysis of first and second order systems. Equivalent circuits and power. The Electrical Engineering Lab, EE 336, must be taken during the same semester as EE 335.

Prerequisites: MA 345, PS 250.

EE 336

Electrical Engineering Laboratory I (0,3)

1 Credit

Laboratory experiments and techniques in electrical engineering. The Electrical Engineering Lab EE 336 must be taken during the same semester as EE 335.

Prerequisite: PS 253.

EE 340

Electric and Magnetic Fields (3,0)

3 Credits

This course introduces the study of time-varying electromagnetic fields and the relevant analysis in electrical engineering, electrostatics and magnetostatics. Topics discussed include the study of magnetic and dielectric material properties; Maxwell's equations; energy and radiation of plane waves. Introduction of

electromagnetic waves, transmission lines, the Smith chart, and radiation from antennas.

Prerequisites: MA 441, PS 250.

EE 401

Control Systems Analysis and Design (3,0)

3 Credits

Modeling, analysis, and design of analog and digital linear control systems using time and frequency domain techniques. Topics include feedback control system characteristics performance analysis and stability, Z-transforms, and controller design.

Prerequisite: EE 303 or EE 309.

Corequisite: EE 402.

EE 402

Control Systems Laboratory (0,3)

1 Credit

Laboratory experiments involving the principles of operation and design of linear control systems. Experiments to support theory introduced in EE 401.

Corequisite: EE 401.

EE 406

Digital Signal Processing (3,0)

3 Credits

Discrete-time description of signals and systems. D/A and A/D conversion, sampling, and aliasing. Fourier transform of discrete signals, the discrete Fourier transform, and the Z-transform. Digital filter structures, filter implementation, and synthesis techniques. Digitization, quantization, and finite precision effects. Discrete system simulation and DSP applications.

Prerequisites: EE 303 or EE 309, CEC 320.

Corequisite: EE 407.

EE 407

Digital Signal Processing Laboratory (0,3)

1 Credit

Analog and digital filter design using MATLAB. Digital filter implementation with C programming and assembly code. Input/output, filtering, and waveform generation with a 32-bit floating-point DSP development system.

Corequisite: EE 406.

EE 410

Communication Systems (3,0)

3 Credits

This course is a study of the theory and application of electronic communications systems; spectral analysis, modulation and demodulation techniques; transmit-

Undergraduate Course Descriptions

ting and receiving systems and behavior of receivers and transmitters in the presence of noise. Study of typical avionic radio systems presently in use such as NAV, COMM, DME, ATCRBS, ILS, and others

Prerequisites: EE 303 or EE 309, EE 340.

Corequisite: EE 412.

EE 412

Communication Systems Laboratory (0,3)

1 Credit

Laboratory experiments involving design and analysis of electronic communication circuitry and measuring performance characteristics and limitations of various communication components and systems.

Corequisite: EE 410.

EE 420

Avionics Preliminary Design (3,0)

3 Credits

Study of FAA requirements governing design of airborne electronic equipment. Study of component and subsystem specification and design practices. Application of the above in the preparation of a proposal/design plan for an airborne electrical/electronic subsystem. Integrate the knowledge gained throughout the curriculum with practical aspects of the practice of engineering to enable the student to comprehend engineering as a pivotal aspect of the business cycle and to responsibly participate in society by the practice of his/her profession. The course will introduce the combination of hardware and software requirements and preliminary design, preparation of project, and testing plans following established industry standards.

Prerequisites: CEC 320, CEC 322.

Corequisites: EE 401, EE 410.

EE 421

Avionics Detail Design (3,0)

3 Credits

Continuation of EE 420. Senior-level project. Students will work as members of a team in the execution of winning proposals from EE 420/428. The course incorporates the combination of hardware and software detailed design, implementation, and testing following established industry standards.

Prerequisites: EE 401, EE 410, EE 420.

EE 450

Elements of Power Systems (3,0)

3 Credits

Electrical power conversion and control. Use of electronic devices as switches. Power computations for linear and nonlinear circuits, single and three-phase power distribution, and transformers. Controlled and uncontrolled rectification. AC voltage controllers, DC-DC converters, DC power supplies, DC-AC inverters, and resonant converters.

Corequisite: EE 452.

EE 452

Power Systems Laboratory (0,3)

1 Credit

Laboratory projects in power conversion and control. Measurement techniques of average and apparent power, power factor, average and RMS voltage and current, and harmonics. PWM control circuits, power electronic circuit design, and thermal management techniques.

Corequisite: EE 450.

EE 460

Advanced Controls and System Integration (3,0)

3 Credits

This course is the continuation of EE 401. Topics of discussion include a study of modern control methods including state variables, controllability, observability and modern design techniques, integration of avionics systems by different avionics databus protocols including ARINC-429, ARINC-629, Mil Std 1553 and RS-232. It also includes a design project.

Prerequisite: EE 401 or equivalent.

EE 299 - 499

Special Topics in Electrical Engineering

1-6 Credits

Directed studies of selected topics in electrical engineering.

Prerequisite: Consent of instructor and department chair.

Engineering

EGR 101

Introduction to Engineering (1,2)

2 Credits

This course is an introduction to the interdisciplinary aspects of the engineering of aerospace systems. It is a project-based course, demonstrating how the engineering profession is a multi-disciplinary field.

Undergraduate Course Descriptions

Students are involved in an array of conceptual exercises, simple design activities, and projects dealing with engineering in aerospace-related areas.

EGR 115

Introduction to Computing for Engineers (3,0)

3 Credits

This is an introductory course in programming and computing for scientists and engineers. The course introduces students to the following aspects of software engineering: specification, requirements, design, code, and test. This course uses a problem-solving approach for developing algorithms. The following topics will be included: data types and related operations, looping, decision, input/output, functions, arrays, files, and plotting.

Prerequisite: Pre-Calculus or permission of the instructor.

EGR 200

Computer Aided Conceptual Design of Aerospace Systems (2,3)

3 Credits

Application and use of a high-end computer-aided design (CAD) tool for graphical communication of conceptual engineering designs. Includes definition of standards and conventions for generating part and assembly drawings as well as introductory methods for creating and documenting conceptual aerospace systems design.

Prerequisite: EGR 101, PS 150.

EGR 401

Advanced CATIA (1,1)

1 Credits

This course explores advanced CATIA options for performing design and analysis of complex parts and assemblies, including knowledgware, simulation, structural analysis, sheet metal design, and automated machining. The methodology for creating complex aircraft and machine component models is also covered. CATIA models are also used to create dynamic simulations using MATLAB Simulink software.

Prerequisite: EGR 200

Engineering Physics

A grade of C or better is required in MA 241, MA 242, and either PS 150 or PS 215 and PS 216 for entry into all EP courses. A passing grade in all prerequisite courses or department consent is required for entry into all EP courses.

EP 394

Space Systems Engineering (3,0)

3 Credits

Development of the fundamental principles used in the engineering and design of space systems. Several major subsystems including power, telemetry and command, communications, thermal control and guidance, navigation, and control subsystems are covered. Topics on space environmental control and life support systems, space system integration and testing, and space system operations are also discussed.

Prerequisite: AE 313 or EP 393 or consent of the instructor.

EP 199 - 499

Special Topics in Engineering Physics

1-4 Credits

Individual, independent, or directed study of topics in the fields of applied physics, space systems, and allied engineering disciplines. Student design projects involve significant engineering design such as micro-gravity experiments and moon-buggy design. May be considered as an engineering elective with approval of the program coordinator.

Engineering Science

A grade of C or better is required in MA 241, MA 242, and either PS 150 or PS 215 and PS 216 for entry into all ES courses. A passing grade in all prerequisite courses or department consent is required for entry into all ES courses.

ES 201

Statics (3,0)

3 Credits

This course explores a vector treatment of the concepts and characteristics of forces and couples. Topics discussed include; distributed forces, center of mass, centroid, equilibrium of particles and rigid bodies, trusses and frames, internal forces, shear and moment distribution in beams and area moments of inertia..

Prerequisites: MA 242, PS 150, or PS 215.

Corequisite: EGR 115.

Undergraduate Course Descriptions

ES 202

Solid Mechanics (3,0)

3 Credits

The concepts of stress and strain and their tensor properties. Elastic stress-strain relations. Analysis of stress and deformation in members subject to axial, torsional, bending, and combined loading. Column stability.

Prerequisites: EGR 115, ES 201.

ES 204

Dynamics (3,0)

3 Credits

A vector treatment of the kinematics and kinetics of particles and rigid bodies. Acceleration, work, energy, power, impulse, and momentum.

Prerequisites: EGR 115, ES 201.

Corequisite: MA 345.

ES 206

Fluid Mechanics (3,0)

3 Credits

Physical characteristics of the fluid state. Fluid statics. Kinematics of fluid motion. Flow of an incompressible ideal fluid. The impulse-momentum principles. Similitude and dimensional analysis, fluid measurements.

Prerequisite: ES 201.

ES 207

Fundamentals of Mechanics (3,0)

3 Credits

Vector analysis of forces and moments. Equilibrium analysis of static systems. Center of gravity. Kinematics, kinetics, work and energy, impulse and momentum.

Prerequisite: PS 150.

ES 305

Thermodynamics (3,0)

3 Credits

A study of the concepts of heat and work and their transformation as governed by the first and second laws of thermodynamics. Properties of pure substances. Ideal gas behavior and relationships. Reversible processes and temperature-entropy diagrams. Conventional power cycles. Properties of ideal gas mixtures. Combustion.

Prerequisites: PS 160 or PS 208.

Corequisite: ES 206

ES 306

Fiber Optics (2.5,,5)

3 Credits

An introductory course on optical fiber technology and applications. Course covers optical waveguide theory (multi-mode and single-mode), light sources (LEDs and lasers), and light detectors and how these components work together to form an electro-optical system. Applications to communications, sensors, and aviation are studied. Some laboratory work, computer design, and literature research are required to broaden the student's viewpoint and to achieve credit of engineering design.

Prerequisites: MA 441, PS 160.

ES 312

Energy Transfer Fundamentals (3,0)

3 Credits

First and Second Laws of Thermodynamics for control masses and control volumes. Fundamentals of heat transfer: conduction, convection, and radiation. Application of energy balances.

Prerequisite: PS 160.

ES 315

Space Environment and Effects (3,0)

3 Credits

This course studies the effects of the space environment on spacecraft and spacecraft design. The vacuum, neutral, plasma, radiation, and space debris environments and their effect on space missions are examined. Special emphasis is placed on investigating the effects of radiation on electrical spacecraft subsystems and the space debris environment.

Prerequisite: PS 250, junior standing, or instructor consent.

ES 320

Engineering Materials Science (2,0)

2 Credits

Materials used in aeronautical engineering applications. Properties of materials and their measurements. Metals and their structures. Characteristics of metallic phases. Equilibrium diagrams. Processing of metals and alloys. Plastics, their structures, and characteristics. Ceramics and their characteristics. Composite materials. Corrosion. The Engineering Materials Science Lab ES 321 must be taken during the same semester as ES 320.

Prerequisites: COM 221, ES 202, and PS 105 or PS 140.
Corequisite: ES 321.

Undergraduate Course Descriptions

ES 321

Engineering Materials Science Laboratory (0,3)
1 Credit

Students will complete laboratory experiments and study techniques in materials science, composites and solids mechanics. The Engineering Material Science Lab must be taken during the same semester as ES 320.

Corequisite: ES 320

ES 322

Aerospace Engineering Failure (2,0)
2 Credits

A variety of structural and material failure topics will be explored, with emphasis on issues prevalent in the aerospace industry. Topics included are advanced fatigue and fracture, thermo-mechanical failure, fastener failure, wear, certain types of corrosion, impact damage to metals and composites, statistical failure analysis, non-destructive evaluation, and structural health monitoring. Aerospace Engineering Failure Laboratory ES 323 must be taken during the same semester as Aerospace Engineering Failure ES 322..

Prerequisites: AE 318 or ME 304.

Corequisite: ES 323.

ES 323

Aerospace Engineering Failure Laboratory (0,3)
1 Credit

A series of laboratory experiments will be conducted in sequence with the topics presented in Aerospace Engineering Failure ES 322. Interpretation of experimental results, knowledge of select case histories, inspection of failed components removed from service, and the development of skills enabling the student to investigate structural and material failures will be integral to this course. Aerospace engineering Failure ES 322 must be taken during the same semester as Aerospace Engineering Failure Laboratory ES 323.

Prerequisites: AE 318 or ME 305.

Corequisite: ES 322.

ES 403

Heat Transfer (3,0)
3 Credits

One- and two-dimensional steady and unsteady state conduction heat transfer including an introduction to finite-difference and finite-element methods of analysis. Free and forced convection heat transfer. Radiation heat transfer.

Prerequisites: ES 206, ES 305, MA 345.

ES 412

Structural Dynamics (3,0)
3 Credits

Simple harmonic motion. Undamped and damped free vibration and forced vibration. Multiple degrees of freedom. Multi-mass torsional and transverse systems. Equivalent torsional systems. Balancing. Dynamic damping. Computer analysis using finite element modeling.

Prerequisites: ES 202, ES 204, MA 345.

ES 413

Engineering Fundamentals Review (1,2)
1 Credit

This course is a review of fundamental engineering principles. Problem-solving tutorial sessions help engineering students prepare for the National Fundamental Engineering or Engineering-in-Training Examination.

Prerequisite: Senior status.

ES 299 - 499

Special Topics in Engineering Science
1-6 Credits

Individual independent or directed studies of selected topics in engineering science.

Prerequisites: Consent of instructor and department chair. May be repeated with change of content.

Flight-Airplane

FA 109

Intermediate Flight Transition and Procedural Familiarization
1 Credit

A review of elementary commercial pilot flight operations including basic aircraft control, elementary radio navigation, air traffic control procedure, cross-country operations, and solo flight. Associated ground instruction will include a review of knowledge areas required for Private Pilot certification. This course is specifically designed for students entering Embry-Riddle's Commercial Pilot program with a Private Pilot certificate and desiring advanced standing.

Prerequisite: FAA Private Pilot Certification with Airplane Single-Engine Land Rating.

Undergraduate Course Descriptions

FA 119

Private Single Flight

1 Credit

During this course the student obtains the foundation for all future aviation training. The student will receive training in the maneuvers and procedures necessary for him/her to meet the standards contained in the FAA Private Pilot Practical Test Standards. Additionally, the student will receive training in safety awareness, crew resource management, and aeronautical decision-making. At the successful completion of this course the student will have gained the aeronautical experience necessary to attain a Private Pilot Certificate with an Airplane Single Engine Land Rating.

Corequisite: AS 119. **NOTE:** The FAA requires AS 119 to be completed at Embry-Riddle with a "C" or higher. Students who transfer credit for AS 119 will be required to complete additional ground training in FA 119 to meet the FAA requirement.

FA 122

Private Multi Flight with Laboratory

1 Credit

The student will receive training in the maneuvers and procedures necessary to meet the standards contained in the FAA Multi Engine Private Pilot Practical Test Standards. Additionally, the student will receive training in safety awareness, crew resource management, and aeronautical decision-making. At the successful completion of this course the student will have gained the aeronautical experience necessary to attain the addition of a Multi-Engine Rating for the Private Pilot Certificate.

Prerequisite: Chief Flight Instructor consent required prior to enrolling in this course.

FA 215

Upset Training

1 Credit

This flight course is designed to give certified pilots the experience and knowledge to immediately recognize aircraft upset situations and the skills to safely and precisely recover from such occurrences. This course will include flight recoveries from nose-high, nose-low, and inverted attitudes; spin entries and recoveries; and basic aerobatic maneuvers.

FA 221

Instrument Single Flight

1 Credit

The student will receive training in the maneuvers and procedures necessary to meet the standards contained in the FAA Instrument Rating Practical Test Standards. Additionally, the student will receive training in safety awareness, crew resource management, and aeronautical decision-making. At the successful completion of this course, the student will have gained the aeronautical experience necessary to attain the addition of an Instrument Rating for the Private Pilot Certificate.

Prerequisite: Private Pilot Certificate with an Airplane Single Engine Land Rating (FA 119).

Corequisite: AS 221. **NOTE:** The FAA requires AS 221 to be completed at Embry-Riddle with a "C" or higher. Students who transfer credit for AS 221 will be required to complete additional ground training in FA 221 to meet the FAA requirement.

FA 222

Instrument Multi Flight

1 Credit

The student will receive training in the maneuvers and procedures necessary to meet the standards contained in the FAA Instrument Rating Practical Test Standards. Additionally, the student will receive training in safety awareness, crew resource management, and aeronautical decision-making. At the successful completion of this course, the student will have gained the aeronautical experience necessary to attain the addition of an Instrument Rating for the Private Pilot Certificate.

Prerequisite: Private Pilot Certificate with an Airplane Multi Engine Land Rating (FA 119).

Corequisite: AS 221. **NOTE:** The FAA requires AS 221 to be completed at Embry-Riddle with a "C" or higher. Students who transfer credit for AS 221 will be required to complete additional ground training in FA 222 to meet the FAA requirement.

FA 321

Commercial Single Flight

1 Credit

The student will receive training in the maneuvers and procedures necessary to meet the standards contained in the FAA Commercial Pilot Practical Test Standards. Additionally, the student will receive training in safety awareness, crew resource management, and aeronautical decision-making. At the successful completion of this course, the student will have

Undergraduate Course Descriptions

gained the aeronautical knowledge and skills necessary to attain a Commercial Pilot Certificate with an Airplane Single Engine Land Rating.

Prerequisite: Private Pilot Certificate with Airplane Single Engine Land and Instrument Airplane Ratings (FA 221).

Corequisite: AS 321. **NOTE:** The FAA requires AS 321 to be completed at Embry-Riddle with a "C" or higher. Students who transfer credit for AS 321 will be required to complete additional ground training in FA 321 to meet the FAA requirement.

FA 322

Commercial Multi-Flight

1 Credit

The student will receive training in the maneuvers and procedures necessary to meet the standards contained in the FAA Multi Engine Commercial Pilot Practical Test Standards. Additionally, the student will receive training in safety awareness, crew resource management, and aeronautical decision-making. At the successful completion of this course, the student will have gained the aeronautical experience necessary to attain a Commercial Pilot Certificate with an Airplane Multi Engine Land Rating.

Prerequisite: Private Pilot Certificate with Airplane Multi Engine Land and Instrument Airplane Ratings (FA 222).

Corequisite: AS 321. **NOTE:** The FAA requires AS 321 to be completed at Embry-Riddle with a "C" or higher. Students who transfer credit for AS 321 will be required to complete additional ground training in FA 322 to meet the FAA requirement.

FA 323

Commercial Multi-Add On

1 Credit

The student will receive training in the maneuvers and procedures necessary to meet the standards contained in the FAA Multi Engine Commercial Pilot Practical Test Standards. Additionally, the student will receive training in safety awareness, crew resource management, and aeronautical decision-making. At the successful completion of this course, the student will have gained the aeronautical experience necessary to attain the addition of a Multi-Engine Rating for the Commercial Pilot Certificate.

Prerequisite: Commercial Pilot Certificate with Airplane Single Engine Land and Instrument Airplane Ratings (FA 321).

FA 326

Commercial Single Add On Flight

1 Credit

The student will receive training in the maneuvers and procedures necessary to meet the standards contained in the FAA Commercial Pilot Practical Test Standards. Additionally, the student will receive training in safety awareness, crew resource management, and aeronautical decision-making. At the successful completion of this course, the student will have gained the aeronautical experience necessary to attain the addition of a Single Engine Rating for his/her Commercial Pilot Certificate.

Prerequisite: Commercial Pilot Certificate with Airplane Multi Engine Land and Instrument Airplane Ratings (FA 322).

FA 370

Advanced Multi-Engine Instrument Flight

1 Credit

Introduction to autopilot and flight director operations to further develop instrument piloting skills to the ATP level. In addition, the student is introduced to advanced cross-country operations, with emphasis on precision flying skills and the use of automated flight management systems in an IFR environment..

Prerequisite: Commercial Pilot Certificate with Airplane Multi Engine Land and Instrument Airplane Ratings (FA 322 or FA 323).

FA 421

Flight Instructor Rating

1 Credit

The student will receive training in the maneuvers and procedures necessary for him/her to meet the standards contained in the Flight Instructor practical test standards, Single-Engine Land with Instrument Airplane rating. Additionally, the student will receive training in cockpit resource management and safe flying practices. Associated ground instruction will include completion of the Fundamentals of Instruction, the Flight Instructor Airplane, and the Flight Instructor Instrument written test.

Prerequisite: FAA Commercial Pilot Certificate with Single-Engine and Instrument Rating (FA 321 or FA 326).

Corequisite: AS 421. **NOTE:** The FAA requires AS 421 to be completed at Embry-Riddle with a "C" or higher. Students who transfer credit for AS 421 will be required to complete additional ground training in FA 421 to meet the FAA requirement.

Undergraduate Course Descriptions

FA 422

Airline Flight Crew Techniques and Procedures

1 Credit

Instruction in airline flight crew operations with emphasis on the transition of the professionally qualified pilot into a highly skilled member of an air carrier flight management team.

Prerequisites: Commercial Pilot Certificate with Multi-Engine/Instrument Airplane Rating, AS 387, AS 435.

Corequisite: AS 420.

FA 460

Multi-Engine Flight Instructor Rating

2 Credits

The student will receive training in the maneuvers and procedures necessary for him/her to meet the FAA standards required to add the Multi-Engine Flight Instructor Rating to his/her CFI/I Rating. Additional instruction will be provided in advanced multi-engine flight crew training techniques including cockpit resource management and safe flying practices.

Prerequisites: FA 421 or FAA Commercial Pilot Certificate with Airplane Multi-Engine Land and Instrument-Airplane Ratings and a FAA Flight Instructor Certificate with an Instrument Airplane Rating.

FA 199 - 499

Special Topics in Flight

0-2 Credits

Flight training in selected areas for the purpose of gaining proficiency in required pilot operations for various certificates and ratings.

Prerequisites: Approval of chief flight instructor and department chair.

Flight-Helicopter

FH 142

Helicopter Pilot Flight Private

1 Credit

The student will receive the required training in the basic aerodynamic fundamentals of helicopter flight including maneuvers and procedures necessary for the student to meet the standards as described in the FAA Private Rotorcraft Practical Test Standards. In addition, the student will receive training in safety awareness, and aeronautical decision making. At the successful completion of this course, the student will have gained the aeronautical knowledge and experi-

ence necessary to attain a Private Pilot Certificate with a Rotorcraft Rating.

Corequisite: AS 142 *Note: The FAA requires AS 142 to be completed at Embry-Riddle with a "C" or higher. Students who transfer credit for AS 142 will be required to complete additional ground training in FH 142 to meet the FAA requirement.*

FH 145

Intermediate Helicopter Flight Transition and Procedural Familiarization

1 Credit

A review of elementary commercial pilot flight operations including basic rotorcraft control, elementary radio navigation, air traffic control procedures, cross-country operations, and solo flight. Associated ground instruction will include a review of knowledge areas required for Private Pilot Helicopter certification. This course is specifically designed for students entering Embry-Riddle's Commercial Helicopter Pilot Program with a Private Pilot certificate and desiring advance standing.

Prerequisite: FAA Private Pilot Helicopter Certification.

FH 252

Helicopter Pilot Flight Instrument

1 Credit

The student will receive the required training in the maneuvers and procedures necessary to meet the standards in the FAA Instrument-Rotorcraft Practical Test Standards. In addition, the student will receive training in safety awareness and hazardous weather. At the successful completion of this course, the student will have gained the aeronautical knowledge and experience necessary to attain an Instrument Rating for a Private Pilot – Rotorcraft Certificate.

Prerequisite: Private Pilot Certificate with a Rotorcraft - Helicopter class rating (FH 142) or FH 145

Corequisite: AS 252 *Note: The FAA requires AS 252 to be completed at Embry-Riddle with a "C" or higher. Students who transfer credit for AS 252 will be required to complete additional ground training in FH 252 to meet the FAA requirement.*

FH 372

Helicopter Pilot Flight Commercial

1 Credit

The student will receive the required training in the maneuvers and procedures necessary to meet the standards in the FAA Commercial –Rotorcraft Practical Test Standards. In addition, the student will receive training in safety awareness and advanced helicopter operations. At the successful completion of

Undergraduate Course Descriptions

this course, the student will have gained the aeronautical knowledge and experience necessary to attain a Commercial Pilot Certificate with a Rotorcraft Rating.

Prerequisite: *Private Pilot Certificate with a Rotorcraft - Helicopter class and Instrument - Rotorcraft ratings (FH 252)*

Corequisite: *AS 372 Note: The FAA requires AS 372 to be completed at Embry-Riddle with a "C" or higher. Students who transfer credit for AS 372 will be required to complete additional ground training in FH 372 to meet the FAA requirement.*

FH 442

Helicopter Pilot Flight Instructor

1 Credit

The student will receive the required training in the maneuvers and procedures necessary to meet the standards contained in the Flight Instructor practical test standards, Rotorcraft with instrument rating. Additionally, the student will receive training in cockpit resource management and safe flying practices. Associated ground instruction will include completion of the Fundamentals of Instruction, Flight Instructor Helicopter and the Flight Instructor Instrument Helicopter written test.

Corequisite: *AS 442*

Prerequisite: *FAA Commercial Pilot Certificate with Rotorcraft-Helicopter and Instrument Ratings (FH 372)*

Note: *The FAA requires AS 442 to be completed at Embry-Riddle with a "C" or higher. Students who transfer credit for AS 442 will be required to complete additional ground training in FH 442 to meet the FAA requirement.*

Honors

HON 150

Honors Seminar I (3,0)

3 Credits

This course is open only to students enrolled in the Honors program, and will satisfy the lower-level Humanities requirement in general education. An interdisciplinary Humanities course, it focuses on aesthetic, philosophical, and historical aspects of a subject, making use of text materials from several disciplines and varied media. The course also emphasizes student participation in a seminar discussion format and requires that students develop their research, critical thinking, and oral and written com-

munication abilities. Requirements will include (but will not be limited to) text and Web-based original research, written essays, oral presentations, and participation in group discussion. Topics may vary according to instructor.

HON 250

Honors Seminar II (3,0)

3 Credits

This course is intended to satisfy the lower-level Social Sciences requirement in general education. The course focuses on material pertinent to one or more disciplines within the broad arena of the Social Studies. Specific emphases will vary by instructor. The course also emphasizes student participation in a seminar discussion format and requires that students develop their research, critical thinking, and oral and written communication abilities. Requirements will include (but will not be limited to) test and Web-based original research, written essays, oral presentations, and participation in group discussion.

Prerequisite: *HON 150.*

HON 350

Honors Seminar III (3,0)

3 Credits

Honors Seminar III will satisfy either the Humanities or Social Sciences upper-level elective requirement in general education. Building on the previous two Honors seminars, it will require students to further develop their ability to locate and assess primary and secondary research materials, to present effective verbal and written presentations that display more sophisticated research and presentational sensibilities, and to engage in discussion that is rooted in close reading of assigned and unassigned material. Whatever the specific course topic, the seminar will be an interdisciplinary exploration of the subject, will emphasize student participation in focused class discussion, and will foster further development of research, critical thinking, and oral and written communication abilities. Topics vary by instructor.

Prerequisite: *HON 250.*

Undergraduate Course Descriptions

Humanities

Note: Regional Studies (RS) courses are also considered Humanities (HU) courses and can be taken as Humanities electives.

The Humanities 140 Series

The HU 140 series constitutes an integral component of the University's General Education program. This series offers students a variety of choices, with each course fulfilling a lower-level requirement in the humanities. Courses in the HU 140 series emphasize writing, reading, and appreciation skills and are designed to expose students to the complexity of human emotions and experiences. Students also explore the framework of historical and cultural contexts in which artistic and creative expressions have arisen.

In selecting a course from the HU 140 series, students have opportunities to concentrate their studies on one form of cultural expression, such as music, literature, or the visual arts. Others may opt for a course that provides a chronological examination of a cultural expression or a thematic approach to several disciplines in the humanities.

HU 142

Studies in Literature (3,0)

3 Credits

A continuation of COM 122 with emphasis on a survey of literature. Reading materials include selected novels, poems, and plays. Emphasizes writing, reading, and appreciation skills.

Prerequisite: COM 122.

HU 143

Introduction to Rhetoric (3,0)

3 Credits

A continuation of COM 122, HU 143 offers a broad survey of rhetorical theory and practice. Whether noble or base, rhetoric primarily uses language to achieve a desired end, usually persuasion. This course employs primary and secondary readings as a means to examine how rhetorical principles manifest themselves in a variety of cultural texts and to understand the powers of persuasion. Although instructors may choose various approaches to teaching this course, students should expect some exposure to classical rhetoricians.

Prerequisite: COM 122.

HU 144

Studies in Art (3,0)

3 Credits

A continuation of COM 122 with an emphasis on art. Provides a foundation in the basic vocabulary, concept, processes, and history of art. Works of art, sculpture, architecture, and film from various cultures are analyzed. Emphasizes writing, reading, and appreciation skills.

Prerequisite: COM 122.

HU 145

Themes in the Humanities (3,0)

3 Credits

A continuation of COM 122 with interdisciplinary emphasis. Through close reading of primary texts and analysis of visual and performing arts, Themes in the Humanities explores ideas central to the evolution of culture. The course is not restricted by period and is open to the full range of humanistic studies. Themes vary by instructor and are listed in the Schedule of Courses. Emphasizes writing, reading, and appreciation skills.

Prerequisite: COM 122.

HU 146

Music Appreciation and Criticism (3,0)

3 Credits

A continuation of COM 122 with an emphasis on listening to and writing about music. Elements of music (rhythm, meter, tempo, pitch, and pitch relationships), instruments of music, and musical forms. The course emphasizes Western classical music.

Prerequisite: COM 122.

HU 250

Introduction to Logic (3,0)

3 Credits

Principles of valid thinking; the nature of inductive and deductive inferences and their applications.

Prerequisite: Any course from the HU 140 series.

HU 300

World Literature (3,0)

3 Credits

Major works and literary trends in world literature. Course content varies by instructor and is listed in the Schedule of Courses.

Prerequisite: Any course from the HU 140 series.

Undergraduate Course Descriptions

HU 302

Contemporary Issues in Science (3,0)

3 Credits

This course bridges science and the humanities, examining how different disciplines approach problems of common interest. Students study selected contemporary issues such as stem cell use in medicine, evolution vs. intelligent design, imminent worldwide crises, DNA engineering, responses to climate change, and possible problems associated with autonomous machines and artificial intelligence. As they examine their own assumptions while participating in debates that encourage appreciation of other viewpoints, students demonstrate understanding of course topics in class discussion and formal papers. The course is team-taught by a Physical Sciences professor and a Communication professor, and will include guest experts on selected topics.

Prerequisite: COM 221.

HU 305

Modern Literature (3,0)

3 Credits

The mainstreams of literature of this century. Course content varies by instructor and is listed in the Schedule of Courses.

Prerequisite: Any course from the HU 140 series.

HU 310

American Literature (3,0)

3 Credits

A survey of intellectual backgrounds, major works, and literary trends in American literature. Course content varies by instructor and is listed in the Schedule of Courses.

Prerequisite: Any course from the HU 140 series.

HU 315

Drama Seminar (3,0)

3 Credits

Students are exposed to the theater arts and especially to performance. They acquire acting skill through class exercises and performance assignments. Dramatic literature is studied with special attention given to its stage applications. Students may participate either as actors or technicians in the theatrical production, which entails out-of-class rehearsal.

Prerequisite: COM 219.

HU 316

Studies in Music (3,0)

3 Credits

Musical works, musical instruments, and the important developments in the technology of making the music of a specific style, a group of related styles, or a historical sequence. Social and intellectual context of the music studied. Course content varies from semester to semester and is listed in the schedule of courses.

Prerequisite: Any course from the HU 140 series.

HU 319

Advanced Speech (3,0)

3 Credits

This course continues the study of oral communication with emphasis on effective public speaking. It includes the analysis and practice of modern and traditional methods of persuasion within and beyond the classroom.

Prerequisite: COM 219.

HU 320

Aesthetics of Visual and Musical Arts (3,0)

3 Credits

Provides a survey of the major artistic monuments of Western culture and discusses the methods by which artistic productions are analyzed.

Prerequisite: Any course from the HU 140 series.

HU 321

Mythology (3,0)

3 Credits

This course introduces the study of the myths of humankind, both ancient and modern, using perspectives and methods from archeology, anthropology, psychology, literature, and film. It explores what myths reveal about the human psyche and about historical and modern cultures. It builds facility in symbolic thinking and critical understanding of how this thinking influences contemporary literature, art, film, communication, and politics.

Prerequisite: Any course from the HU 140 series.

HU 325

Exploring Film (3,0)

3 Credits

A survey of the art of the film. History of the cinema. Basic elements, photography, continuity and rhythm, movement, imaging, music and sound, script writing, directing, editing, acting, great film artists/directors, cinematographers, actors, etc.

Prerequisite: Any course from the HU 140 series.

Undergraduate Course Descriptions

HU 330

Values and Ethics (3,0)

3 Credits

This course focuses on the process of practical ethics as a way of resolving moral conflict and of understanding professional responsibility in a multiculturally diverse society without devaluating specific viewpoints of ethical or metaphysical theory, ideology, or religion. Students will use proposals, value judgments, observation statements, assumptions, and alternate-world assumptions in arguing contemporary issues of moral importance. With this basic moral logic, students will resolve issues in terms of rights, responsibilities, and the community of rational beings in terms of consequences and contingencies and in terms of habituated virtues and character. Free and unrestricted discourse will be encouraged to let students find common ground in diversity.

Prerequisite: Any course from the HU 140 series.

HU 335

Technology and Modern Civilization (3,0)

3 Credits

A humanistic analysis of technology, with special attention to its influence on modern American culture in a global context. Topics include the history and development of technology, the influence of technology on certain philosophies such as determinism and utilitarianism, the influence of technology on the ecosystem, and the depiction of technology in imaginative literature.

Prerequisite: Any course from the HU 140 series.

HU 341

World Philosophy (3,0)

3 Credits

This course focuses on an investigation of some of the central problems of philosophical inquiry such as what we can know and what we cannot know, how we reason, who we are, why we are here, and what we can hope for. Freedom, beauty, knowledge and logical thinking, mind, morality, god or gods, religion, truth, death, and existence might be explored using a variety of sources, including but not limited to contemporary thinkers of the European and Anglo-American traditions. This course is designed to challenge assumptions and to help students deal with contemporary philosophical issues.

Prerequisite: Any course from the HU 140 series.

HU 345

Comparative Religions (3,0)

3 Credits

A survey of the major religions of the world, beginning with a brief examination of the nature of religion and its study, as a vital aspect of human experience in history. This is followed by a survey of the eastern religions of Hinduism, Buddhism, Jainism, Taoism, Confucianism, and Shinto, and finally a survey of the monotheistic religions: Judaism, Christianity, Islam, and Sikhism.

Prerequisite: Any course from the HU 140 series.

HU 355

Creative Writing (3,0)

3 Credits

The course culminates the interpretive and expressive elements of communications classes. The study, practice, and use of a personal style of creative composition and examples of contemporary literature and submittal of publications are included in this course.

Prerequisite: Any course from the HU 140 series.

HU 361

Interpersonal Communication in the Work Group (3,0)

3 Credits

Examination of interpersonal and small-group communication topics to focus on maximizing decision making in work groups. Students are assigned to simulated consensus-driven groups. Evaluation is based on the quality of the groups' decision making, exams, class participation, and presentation of the groups' findings in a public setting.

Prerequisite: COM 219.

HU 362

Communication and Organizational Culture (3,0)

3 Credits

This course is a study of theory, survey and application of research methods for analysis of communication. Instructors may choose to apply methods in a variety of contexts, such as in house publications, internal communication, speeches and interview communication.

Prerequisites: COM 219 and either COM 221, COM 222, or COM 223.

Undergraduate Course Descriptions

HU 363

Communication and Society (3,0)

3 Credits

An examination of human communication in a variety of cultural settings. Topics vary from semester to semester. Communication behavior is viewed expansively to include verbal discourse, symbolic imagery, nonverbal communication, literature, music, and other art forms. Focus is on understanding communication behavior as symbolic action, as constructive of social reality, and as a means for entry into cultural and sub-cultural group experience.

Prerequisite: Junior standing or permission of professor.

HU 370

Advanced English Grammar (3,0)

3 Credits

This course introduces students to concepts of grammatical theory mainly at the level of syntax. Avoiding the niceties of linguistic distinctions, the course will introduce the student to usable concepts and terms that are also echoed in contemporary style checkers.

Prerequisite: Junior standing.

HU 375

The Nature of Language (3,0)

3 Credits

This course provides a practical investigation into how people use language functions as a system of meaning. The diversity, complexity, and intrinsic fascination of this most human of behaviors is studied largely with reference to the English language. Topics include popular ideas about language, language and identity, language structure and system, language media, language acquisition and learning, language and the brain, and world languages.

Prerequisite: COM 221 or COM 222 or COM 223.

HU 415

Non-Verbal Communication (3,0)

3 Credits

This course entails the study of communication behaviors and processes, not involving the expression of written or spoken words, contribute information to a message. Special attention is directed to the study of voice qualities; facial expression and body language; space, personal distance, and touch; the use of time and objects; and personal appearance. Study also involves nonverbal communication in applied settings, as well as research strategies for observing, measuring, and understanding non-verbal phenomena.

Prerequisites: COM 219, equivalent Speech Communications course. (Also offered as COM 415.)

Students receive either Communication or Humanities credit, but not both.)

HU 420

Applied Cross-Cultural Communication (3,0)

3 Credits

An examination of the challenges to communicating across the variety of subcultures present in work environments. Ethnicity, nationality, gender, physical impairment, and sexuality are among the areas of difference often present in business and professional environments that may influence the establishment of cooperative working relationships. Means for analyzing and developing strategies to transcend and make positive use of subcultural differences will be considered.

Prerequisites: COM 219, and either COM 221, COM 222, or COM 223.

HU 475

Senior Thesis

3 Credits

As the culmination of the student's experience in the Interdisciplinary Disciplinary or Global Security and Intelligence Studies majors, senior thesis requires the student to complete documented research under the guidance of the course instructor, involving subject matter that is demonstrably tied to at least two of the student's three chosen minor fields of study. A series of seminar discussions or extended individual consultations with the course instructor may accompany the guided writing of the thesis. Additional faculty may be interviewed or consulted during the thesis project.

HU 480

Senior Thesis Research (1,0)

1 Credit

Students will select a thesis committee and research problem, conduct appropriate research, and write and defend a thesis proposal and a full sentence outline. Course lectures will be integrated with faculty-guided workshops; topics include an overview of the thesis process; the development of a specific and contentious research problem; organization and format of the required thesis documents; citation standards; and appropriate academic language.

Prerequisite: COM 221 or COM 222 or COM 223.

HU 485

Senior Thesis Writing

2 Credits

Students using the work completed in HU 480, Senior Thesis Research, write their senior thesis in a workshop environment, defending the thesis at the end of

Undergraduate Course Descriptions

the semester. Topics include problem-solution organization, documentation, argumentation, and successful presentation strategies.

Prerequisite: HU 480.

HU 299 - 499

Special Topics in Humanities

1-6 Credits

Individual independent or directed studies of selected topics in the humanities.

Prerequisites: Consent of instructor and approval of the department chair.

Information Technology

IT 109

Introduction to Computers and Applications (3,0)

3 Credits

Introduction to computers and an overview of PC applications. Computer literacy is presented through lectures on the computer process, the impact of computers on society, emerging technologies, and how to make hardware and software purchasing decisions. A hands-on overview of the most popular computer applications such as word processing, spreadsheet, database, electronic mail, and Internet is provided.

Prerequisite: Proficiency in college preparatory mathematics.

IT 210

Web Page Authoring and Design (3,0)

3 Credits

This course will address the organization of the Internet, addressing, routing, DNS, and use of Internet applications. It will review such applications as FTP, telnet, and advanced Web searching methodology. This course covers Web page authoring and design techniques using both HTML and WYSIWYG authoring software. Students will study, create, and refine Web pages online as well as create Web graphics. Lastly, legal and ethical issues related to the Internet and emerging technologies are discussed.

Prerequisite: IT 109 or BA 120, or BA 221 or CS 223, or approval.

Interdisciplinary Studies

IS 100

Interdisciplinary Studies - Issues in Facing the Future (3,0)

3 Credits

This is an introductory interdisciplinary course examining the demands and problems that will confront our society, technology, science, institutions, and personal relations in the future. The course also examines the growing need for personal, institutional, and societal responsibility, change, and paradigm shift in order to meet these demands and problems.

IS 399

Special Topics in Interdisciplinary Studies

1-6 Credits

Individual independent or directed studies of selected topics in interdisciplinary studies.

Prerequisites: Consent of instructor and approval of the program chair.

Languages

LAR 101

Arabic I (3,0)

3 Credits

Elementary oral-aural introduction to Arabic, including such topics as courtesy phrases, basic vocabulary, and patterns for questions and answers. Not open to students with two or more years of high-school instruction or the equivalent, or native speakers of the language.

LAR 102

Arabic II (3,0)

3 Credits

A continuation of LAR 101.

Prerequisite: LAR 101 or consent of the instructor.

LAR 201

Arabic III (3,0)

3 Credits

A continuation of LAR 102.

Prerequisite: LAR 102 or consent of the instructor..

LAR 202

Arabic IV (3,0)

3 Credits

A continuation of LAR 201.

Prerequisite: LAR 201 or consent of the instructor..

Undergraduate Course Descriptions

LAR 399, 499

Special Topics in Arabic Language

1-6 Credits

Individual independent or directed studies of selected topics in the Arabic language.

Prerequisites: Consent of instructor and approval of the department chair.

LCH 101

Mandarin Chinese I (3,0)

3 Credits

Introduction to the Mandarin Chinese language, including the pronunciation system (pin yin), basic grammar, simplified or traditional character writing and reading, and speaking simple sentences, as well as cultural contexts inseparable from the language.

Note: Open only to those without prior knowledge of Mandarin Chinese or with consent of the instructor.

LCH 102

Mandarin Chinese II (3,0)

3 Credits

A continuation of LCH 101.

Prerequisite: LCH 101 or consent of instructor.

LCH 103

Mandarin Chinese I & II (6,0)

6 Credits

Introduction to the Mandarin Chinese language, including the pronunciation system (pin yin), basic grammar, simplified or traditional character writing and reading, and speaking from single sentences to sentence strings, as well as cultural contexts inseparable from language use. Open only to those without prior knowledge of Mandarin Chinese or with consent of the instructor.

Note: Open only to those without prior knowledge of Mandarin Chinese or with consent of the instructor.

LCH 201

Mandarin Chinese III (3,0)

3 Credits

A continuation of LCH 102 with emphasis on communicative abilities in listening, speaking, reading, and writing.

Prerequisite: LCH 102 or LCH 103 or consent of instructor.

LCH 202

Mandarin Chinese IV (3,0)

3 Credits

A continuation of LCH 201.

Prerequisite: LCH 201 or consent of instructor.

LCH 203

Mandarin Chinese III & IV (6,0)

6 Credits

A continuation of LCH 103 with emphasis on communicative abilities in listening, speaking, reading, and writing.

Prerequisite: LCH 102 or LCH 103 or consent of instructor.

LCH 205

Modern Chinese Films (3,0)

3 Credits

This course uses Chinese films for in-depth discussion and critical-thinking of issues concerning contemporary Chinese society in global transition. Students are required to discuss, analyze, and write short essays in Mandarin to bring out the films' cultural underpinnings.

Prerequisite: LCH 302 or LCH 303 or by course equivalency test.

LCH 206

Contemporary Chinese Literature (3,0)

3 Credits

This course selects contemporary Chinese short stories and poems in comparison with classical poetry and oral and performance literature. Class discussions and assignments may be combined with visits to the opera, dances, and theater. Students will gain a unique and in-depth understanding of Chinese culture at both the elite and popular levels. This course emphasizes reading, writing, and appreciation skills in Chinese.

Prerequisite: LCH 205 and LCH 208 or by course equivalency test.

Note: This course is taught in the Chinese Language, with testing, papers and examinations in Chinese. Textbooks will be in English with supplementary material or assignments in Chinese or English required.

LCH 207

Introduction to Geography (3,0)

3 Credits

A survey course designed to acquaint the student with types of maps, map reading and use, as well as

Undergraduate Course Descriptions

to show relationships between geography and economics, culture, and geopolitics. Humans and their use of their environment are stressed, along with the usual emphasis on places, names, and locations. Ancillary topics will include climate, demography, and transportation.

Prerequisite: LCH 205 and LCH 208 or by course equivalency test.

Note: This course is taught in the Chinese Language, with testing, papers and examinations in Chinese. Textbooks will be in English with supplementary material or assignments in Chinese or English required.

LCH 208

Speech in Chinese (3,0)

3 Credits

A continuation of the study of communication and communication theory with emphasis on overcoming communication apprehension, developing listening skills, mastering oral performance, and writing about communication. Individual sections may focus on public speaking, group discussion, oral interpretation, or interpersonal communication. Section emphasis varies by instructor and is listed in the Schedule of Courses.

Prerequisite: COM 122 and either LCH 302 or LCH 303.

Note: This course is taught in the Chinese Language, with testing, papers and examinations in Chinese. Textbooks will be in English with supplementary material or assignments in Chinese or English required.

LCH 301

Intermediate Mandarin Chinese I (3,0)

3 Credits

This course empowers students with the performable ability for sustained appropriate discourse in sentence strings or paragraph chunks on a wide range of topics to be easily understood by native speakers of Mandarin. Topics may include but are not limited to biographical paragraphs, salaries and taxation, college curriculum for different degrees, international travel, government bureaus, and handy personal and emergency situations.

Prerequisite: LCH 202 or LCH 203 or by course equivalency test.

LCH 302

Intermediate Mandarin Chinese II (3,0)

3 Credits

Designed for students who are continuing to the second course in Intermediate Mandarin Chinese, this course provides a variety of real-life simulations such as but not limited to being a tour guide, a marriage counselor, an insurance sales person, a security firm

manager, an environment consultant, and a professional in other fields.

Prerequisite: LCH 301 or by course equivalency test.

LCH 303

Intermediate Mandarin Chinese I & II (6,0)

6 Credits

This course empowers students with the performable ability of sustained appropriate discourse in sentence strings or paragraph chunks in a wide variety of real-life simulations. Discourse should be easily understood by native speakers of Mandarin. Topics may include but are not limited to biographical paragraphs, salaries and taxation, college curriculum for different degrees, international travel, government bureaus, handy personal and emergency situations, being a tour guide, a marriage counselor, an insurance sales person, a security firm manager, an environmental consultant, and a professional in other fields.

Prerequisite: LCH 202 or LCH 203 or by course equivalency test.

LCH 306

Asian Literature (3,0)

3 Credits

A continuation of the study of communication and Asian literature in translation. Representative readings are chosen from ancient times to the present, from poetry to prose, from female writers to male writers, from South Asia to East Asia. Synthesis of major literary themes and development, as well as the cultural contexts for literature, is an important part of the course. The course uses both books and films as study material. A regional and/or thematic focus may be created depending on the instructor's expertise. For example, an instructor may focus on East Asia rather than South Asia, on prose rather than drama.

Prerequisite: Sophomore standing, successful completion of GSIS/Chinese study abroad or consent of the instructor.

Note: This course is taught in the Chinese Language, with testing, papers and examinations in Chinese. Textbooks will be in English with supplementary material or assignments in Chinese or English required.

LCH 307

Personality and Profiling (3,0)

3 Credits

This course provides a rigorous and comprehensive foundation for explaining, understanding, predicting, and influencing people. This foundation will be applied to stopping people from violating trust, namely, committing espionage and to identifying and controlling them as quickly as possible after they have violated trust. The course will largely focus on

Undergraduate Course Descriptions

personality theory and research based on scientific methodologies. The course also will explore other approaches to human knowledge and meaning, including the philosophy of epistemology, literary criticism, and the interpretation of cultural products such as film, music, dance, and painting. By course's end, students will have profiled a U.S. citizen convicted of spying against his country.

Prerequisite: LCH 400 or by course equivalency test.

Note: This course is taught in the Chinese Language, with testing, papers and examinations in Chinese. Textbooks will be in English with supplementary material or assignments in Chinese or English required..

LCH 308

History of Terrorism (3,0)

3 Credits

This course will introduce the student to the history of terrorism, from the 19th century up to the present day. It will evaluate the causes of terrorism, the capabilities and limitations of terrorist groups, the requisites of effective counterterrorism responses, and the future prospects of terrorism. It will address the implications of terrorism and asymmetrical warfare for U.S. national security, including the possible use of weapons of mass destruction. The constitutional and legal implications of counterterrorist strategies will also be discussed. It will examine the organization, objectives, and methodologies of key terrorist groups operating in the 21st century, particularly those showing ideological hardening, religious revivalism, and ethnic militancy.

Prerequisite: : SS 327 and LCH 306.

Note: This course is taught in the Chinese Language, with testing, papers and examinations in Chinese. Textbooks will be in English with supplementary material or assignments in Chinese or English required.

LCH 400

Eastern and Western Civilizations (3,0)

3 Credits

Cultural achievements of Eastern and Western civilization from ancient times to the present. Comparisons will be made among different civilizations of the world, and how these civilizations relate to each other. Course may include supplementary reading and writing assignments in English.

Prerequisite: LCH 308 or by course equivalency test.

Note: This course is taught in the Chinese Language, with testing, papers and examinations in Chinese. Textbooks will be in English with supplementary material or assignments in Chinese or English required.

LCH 402

Applied Cross-Cultural Communication (3,0)

3 Credits

An examination of the challenges to communicating across the variety of subcultures present in work environments. Ethnicity, nationality, gender, physical impairment, and sexuality are among the areas of difference often present in business and professional environments that may influence the establishment of cooperative working relationships. Means for analyzing and developing strategies to transcend and make positive use of subcultural differences will be considered.

Prerequisite: LCH 208 and either COM 221, COM 222 or COM 223.,

Note: This course is taught in the Chinese Language, with testing, papers and examinations in Chinese. Textbooks will be in English with supplementary material or assignments in Chinese or English required.

LCH 199 - 499

Special Topics in Chinese Language

1-6 Credits

Study Abroad course or directed studies of selected topics in the Chinese language.

Prerequisite: Consent of instructor and approval of department chair.

LSP 101

Spanish I (3,0)

3 Credits

Basic grammar and reading. Introduction to conversation. Not open to students with two or more years of high school Spanish or the equivalent.

Note: Not open to native speakers.

LSP 102

Spanish II (3,0)

3 Credits

A continuation of LSP 101.

Prerequisite: LSP 101 or consent of the instructor

LSP 201

Spanish III (3,0)

3 Credits

A continuation of LSP 102.

Prerequisite: LSP 102 or consent of the instructor.

Undergraduate Course Descriptions

LSP 202

Spanish IV (3,0)

3 Credits

A continuation of LSP 201. Students will enhance their speaking skills, learn advanced forms of grammar, and begin reading and formal writing.

Prerequisite: LSP 201 or consent of the instructor.

LSP 399, 499

Special Topics in Spanish Language

1-6 Credits

Individual independent or directed studies of selected topics in the Spanish language.

Prerequisites: Consent of instructor and approval of the department chair.

Mathematics

MA 106

Basic Algebra and Trigonometry (3,0)

3 Credits

The course includes a study of the basic laws of numbers, fractions, exponents, complex numbers, and radicals, as well as an understanding of a variety of expressions and equations including; equalities, inequalities, polynomials, and quadratics. The elements of trigonometry will also be reviewed.

MA 111

College Mathematics for Aviation I (3,0)

3 Credits

A pre-calculus course designed for the student of aviation. Review of the fundamentals of algebra; linear equations and inequalities; quadratic equations; variation; polynomial, rational, exponential, logarithmic, and trigonometric functions; radian measure; right triangle solutions, vectors, and the laws of sines and cosines.

Prerequisite: MA 106, or placement.

MA 112

College Mathematics for Aviation II (3,0)

3 Credits

This course presents basic calculus, designed for the student of aviation. Topics include differentiation and integration of algebraic functions; applications to velocity, acceleration, area curve sketching and computation of extreme values.

Prerequisite: MA 111.

MA 120

Quantitative Methods I (3,0)

3 Credits

An algebra methods course with applications to business and economics. Operations, relations, functions, modeling, and problem solving; systems of linear equations and inequalities.

Prerequisite: Placement.

MA 140

College Algebra (3,0)

3 Credits

This course focuses on fundamentals of exponents, radicals, linear and quadratic equations, inequalities, functions, graphing techniques, and complex numbers. It includes an introduction to function, curve sketching, elementary theory of equations, sequences and series, matrix algebra and systems of equations, linear, polynomial, logarithmic, exponential, inverse and composite functions, variation, and systems of equations.

Prerequisite: MA 106, or placement.

MA 142

Trigonometry (3,0)

3 Credits

Students will be introduced to trigonometric functions and their graphs; identities; radian measure with applications; compound, half and double angle identities; solving elementary trigonometric equations, right and oblique triangles, law of sines and cosines; inverse trigonometric functions; vectors and trigonometric form of a complex number.

Prerequisite: MA 106, or placement.

Corequisite: MA 140.

MA 145

College Algebra and Trigonometry (5,0)

5 Credits

Fundamentals of exponents, radicals, linear and quadratic equations, inequalities, elementary theory of equations, sequences and series, functions, exponential, logarithmic, and trigonometric functions, radian measure, trigonometric identities and equations, vectors, laws of sines, cosines, solutions of right triangles, and complex numbers.

Prerequisite: MA 106, or placement.

Undergraduate Course Descriptions

MA 220

Quantitative Methods II (3,0)

3 Credits

This course is an introductory calculus course with applications to business and economics; limits; differentiation and integration of algebraic, exponential and logarithmic functions; applications of differentiation to maximizing and minimizing; curve sketching; marginal values..

Prerequisite: MA 111 or MA 120.

MA 222

Business Statistics (3,0)

3 Credits

This course is a study of basic descriptive and inferential statistics. Topics include types of data, sampling techniques, measures of central tendency and dispersion, elementary probability, discrete and continuous probability distributions, sampling distributions, hypothesis testing, confidence intervals, and simple linear regression

Prerequisite: MA 111 or MA 140.

MA 241

Calculus and Analytical Geometry I (4,0)

4 Credits

Graphs and functions; limits and continuity; differentiation and integration of algebraic and elementary trigonometric functions; applications of first and second derivatives.

Prerequisite: MA 140 or MA 145 or equivalent.

Corequisite: MA 142.

MA 242

Calculus and Analytical Geometry II (4,0)

4 Credits

Differentiation and integration of transcendental functions; elements of infinite series; special integration techniques; polar coordinates; applications of the definite integral; numerical methods.

Prerequisite: MA 241.

MA 243

Calculus and Analytical Geometry III (4,0)

4 Credits

Solid analytic geometry; vector functions in three dimensions; line and surface integrals, partial differentiation; directional derivative and gradient; multiple integrals.

Prerequisite: MA 242.

MA 244

Combined Calculus (5,0)

5 Credits

Covers all the topics currently in MA 241 and MA 242.

Prerequisite: One year of calculus.

MA 320

Decision Mathematics (3,0)

3 Credits

The mathematical concepts and applications in mathematical model building and problem solving. Included are mathematical areas that are basic to decision theory.

Prerequisite: MA 222. Not open to engineering students.

MA 341

Introduction to Mathematical Analysis (3,0)

3 Credits

Careful treatment of the theoretical aspects of the calculus of functions of a real variable. Topics include the real number system, limits, continuity, derivatives, the Riemann integral, elementary notions of topology and metric spaces.

Prerequisite: MA 243.

MA 345

Differential Equations and Matrix Methods (4,0)

4 Credits

Treatment of ordinary differential equations to include principal types of first and second order equations; methods of substitution on simple higher order equations; linear equations and systems of linear equations with constant coefficients; methods of undetermined coefficients and variation of parameters; Laplace transforms; series solutions; linear algebra and matrix methods of solutions; applications to physics and engineering.

Prerequisite: MA 243.

MA 348

Numerical Analysis I (3,0)

3 Credits

Floating point arithmetic, error analysis, algorithms in interpolation, integration, differentiation, matrix algebra, approximation and solution of equations, use of numerical software packages.

Prerequisites: CS 210, MA 345.

Undergraduate Course Descriptions

MA 404

Statistics and Research Methods (3,0)

3 Credits

Elements of probability theory including finite probability spaces, conditional probabilities, independence, correlation, Bayes' Theorem, and Gaussian random variables. Statistical methods including contingency tables, regression, hypothesis testing. Experimental design. Ethical considerations in experimentation. Nonquantitative research methodologies. Numerical methods including the introduction of at least one computer-based statistics package.

Prerequisite: MA 112 or MA 241.

MA 412

Probability and Statistics (3,0)

3 Credits

Finite sample spaces; conditional probability and Bayes' Theorem, discrete and continuous random variables and their functions; expected value, variance, and standard deviation; systematic study of the major discrete and continuous distributions; moment generating functions; hypothesis testing and estimation.

Prerequisite: MA 243.

MA 432

Linear Algebra (3,0)

3 Credits

Review of vector and matrix operations including matrix inverses, eigenvectors, and eigenvalues. Equations of lines and planes, vector spaces including basis and dimensions, linear transformations, change of basis, diagonalization of matrices, inner products and orthonormal bases, applications.

Corequisite: MA 345.

MA 441

Mathematical Methods for Engineering and Physics I (3,0)

3 Credits

Line and surface integrals; vector fields with the study of Green, Gauss, and Stokes Theorems; applications of vector field theory; Fourier series.

Prerequisite: MA 345.

MA 442

Mathematical Methods for Engineering and Physics II (3,0)

3 Credits

The solution of linear differential equations with variable coefficients; study of the derivation, character-

istics, and solutions of partial differential equations; Fourier series, Fourier transform, Laplace transform, and Breen's function; applications in science and engineering.

Prerequisite: MA 441.

MA 443

Complex Variables (3,0)

3 Credits

Algebra of complex numbers; complex functions, analytic functions; mapping by elementary functions; conformal mappings and their applications; additional topics may include complex integration, and power series expansion.

Prerequisite: MA 441.

MA 299 - 499

Special Topics in Mathematics

1-6 Credits

Individual independent or directed studies of selected topics in mathematics.

Prerequisites: Consent of instructor and approval of the department chair.

Mechanical Engineering

A grade of C or better is required in MA 241, MA 242, and either PS 150 and PS 160 or PS 215, PS 216 and PS 208 for entry into all ME courses. A passing grade in all prerequisite courses or department consent is required for entry into all ME courses.

ME 302

Introduction to Robotics (3,0)

3 Credits

This course is an introduction to robotics with emphasis on the mathematical tools for kinematics and dynamics of robot arms. Topics include the geometry and mathematical representation of rigid body motion; forward and inverse kinematics of articulated mechanical arms; trajectory generation, splines, interpolation; manipulator dynamics; position sensing and actuation; an introduction to topics in manipulator control and computer vision.

Prerequisite: ES 204.

ME 302L

Introduction to Robotics Laboratory (0,3)

1 Credit

This laboratory course programs a manipulator arm to perform industrial robotic applications. Topics fol-

Undergraduate Course Descriptions

low ME 302 lectures on robot kinematics and dynamics. Advanced topics include visual feedback control such as using a Cognex machine vision system with the Denso robots.

Prerequisite: ES 204.

Corequisite: This course must be taken concurrently with ME 302.

ME 303

Vehicle Dynamics (3,0)

3 Credits

This course covers design considerations for high-performance vehicles such as competition automobiles and high-speed mass transit vehicles. Considered are propulsion, aerodynamics, stability, down force enhancement systems, braking and handling. Engines for various vehicles are compared, such as the conventional internal combustion engine, the rotary or Wankel, for competition applications and long-life requirements such as traction engines for rail applications. Also investigated are crash safety issues for both mass transit and competition. Guided vehicles such as mass transit trains and the Intelligent Transportation System (ITS) are investigated. Future technologies such as magnetically levitated and very high-speed mass transit systems are analyzed.

Prerequisites: ES 202, ES 204, and ES 305, or consent of the instructor.

ME 304

Introduction to Machine Design (3,0)

3 Credits

Detail design of machine components; application of analytical methods in the design of simple machines. Failure mode analysis, theories of failure, yield, fracture, deflection, and fatigue analysis of machine elements. Introduction to computer methods of stress and deflection analysis using finite element analysis.

Prerequisites: EGR 200, ES 202, and ES 204.

ME 305

Machine Design Laboratory (0,3)

1 Credit

A companion laboratory to ME 304.

Corequisite: ME 304.

ME 306

Robotic Mechanisms (3,0)

3 Credits

This course studies the application and design of robotic systems. Rover drives, suspension systems, tracked vehicles, gimbal-mounted cameras/sensors,

and walking robots are covered with an emphasis on space and aerial robotic applications. Several hands-on projects will be conducted and a final design project is required.

Prerequisite: ME 204.

ME 309

Airbreathing and Rocket Propulsion (3,0)

3 Credits

A study of airbreathing and rocket engines. Topics include control volume, conservation equations, and thermodynamic analyses as they apply to a propulsion system as well as components, such as inlets, compressors, burners, turbines, and nozzles. Airbreathing engine analysis will cover both on-design (Parametric Cycle Analysis) and off-design (Engine Performance Analysis) performance. Rocket analysis will address performance of both liquid and solid propellant motors.

Prerequisite: ES 305.

ME 312

Alternative Energy (3,0)

3 Credits

The course includes availability and the evaluation of thermodynamic properties, thermodynamics of compressible flow, thermodynamic power systems; mixtures of ideal gases; wind energy conversion, solar photovoltaic and solar thermal energy systems, introduction to combustion as applied to biomass systems; gas turbines, fuel cells and direct energy conversion. Design and optimization of a power system for a stationary or vehicles/craft.

Prerequisite: ES 305.

ME 400

Vibration & Acoustics (3,0)

3 Credits

Basic concepts of vibration; free and undamped vibration; energy methods and Rayleigh's method for determination of natural frequencies; viscously damped vibration; various damping mechanisms; torsional vibration; harmonically excited vibration; transient vibration; multi degrees of freedom systems; rotor dynamics; basic principles of acoustics and wave propagation; electroacoustics; transducers, noise measurements; applications to land, airborne, and space vehicle acoustics generated by a structure's vibration or by aerodynamic sources.

Prerequisites: MA 345, ES 202 and ES 204, or approval of the instructor.

Undergraduate Course Descriptions

ME 401

Advanced Fluid Dynamics (3,0)

3 Credits

Development of application of Navier-Stokes equations, estimation of drag and lift, isentropic flow, normal and oblique shock waves, Fanno and Rayleigh flow, turbomachinery, introduction to computational fluid dynamics, application of CFD software.

Prerequisite: ES 206.

ME 402

Robotic Arms (3,0)

3 Credits

This course is an introduction to robotics with an emphasis on kinematics and dynamics of robotic arms. The Space Shuttle arm and the Mars rover arms will be analyzed. Topics include forward and inverse kinematics, trajectory generation, interpolation, and position sensing. Students will complete a project where they program a robotic arm and/or robotic welder.

Prerequisite: ES 204.

Corequisites: EE 401, ME 306.

ME 403

Thermal Power Systems (3,0)

3 Credits

Availability and evaluation of thermodynamic properties. The thermodynamics of compressible flow. Thermodynamic power and refrigeration cycles and systems; psychometrics and environmental control; mixtures of ideal gases; introduction to combustion; internal combustion engines, gas turbines, fuel cells; and direct energy conversion. Design and optimization of power systems and climate control with applications to land vehicles, robotics, aircraft, and spacecraft.

Prerequisites: ES 305, MA 345.

ME 404

Mechatronics (3,0)

3 Credits

This course includes the application of microprocessors to robotic systems with control. This course emphasizes the integration of aerospace, mechanical, electrical, and computer systems in robotics. Design and integration of microcontrollers, actuators, motors, power systems, and sensors are studied with significant group-oriented design experiments. High-level graphical programming is introduced. Simple autonomous algorithms such as line tracking, edge detection,

and path planning are examined with and without feedback control.

Prerequisites: ES 204 and EE 335/336 or EE 223/224.

ME 404L

Mechatronics Laboratory (0,3)

1 Credit

This laboratory course implements real-time systems to control aerospace and robotic systems, with an emphasis on microcontrollers and embedded hardware with a Real Time Operating System (RTOS). Topics follow ME 404 lectures on actuators, motor controllers, sensors, filters and their implementation.

Prerequisites: ES 204 and EE 335/336 or EE 223/224.

Corequisites: This course must be taken concurrently with ME 404.

ME 405

Vehicle Power Systems (3,0)

3 Credits

Modern analytical approach to the design and performance analysis of advanced internal combustion engines. Study of thermodynamics, fluid flow, combustion, and heat transfer. Engines for various vehicles are compared (such as the conventional internal combustion engine, the rotary or Wankel), for competition applications and long-life requirements such as traction engines for rail applications. Fuels and combustion, exhaust flows, emission and air pollution, fuel cell systems, hybrid vehicles. Ideas from aerospace technologies are implemented, such as jet engines and gas turbines for powering vehicles, and mass transit. Also, future technologies such as magnetically levitated and very high-speed mass transit systems are analyzed. Application of course techniques to engine research projects.

Prerequisite: ES 305.

ME 406

Robotics II (3,0)

3 Credits

This course studies the applications and design of robotic systems. Particular emphasis is placed on aviation and space applications of robotics. Typical robotic motion is investigated as well as the requirements for control systems for the needed accuracy, repeatability, and stability. Sensors such as position, force, and acceleration are explored as well as the signal conditioning circuits and analog-to-digital conversion required for interfacing these sensors. Activating devices such as electric motors, linear actuators, and other motion devices are analyzed. Systems are mod-

Undergraduate Course Descriptions

eled and control laws are developed. Software for computer-generated control laws are studied.

Prerequisite: ME 302, AE 430.

Corequisite: MA 412.

ME 406L

Robotics II Laboratory (0,3)

1 Credit

This laboratory course focuses on the real-time software and computer hardware control of robotic systems necessary for senior detailed design. Multi-degree of freedom robotic manipulators are constructed with a particular emphasis on harmonic drives, AC servo motors, and associated controllers.

Prerequisite: ME 302/302L, AE 430.

Corequisite: This course must be taken concurrently with ME 406.

ME 407

Preliminary Design of Robotic Systems with Laboratory (3,3)

4 Credits

Mechanical design principles are developed and applied for robotic applications. The topic is selected and approved by the Mechanical Engineering Department. Principles of conceptual and detailed mechanical design, and component design, manufacture, and production are covered. A complete system is designed, resulting in a complete set of specifications, supporting analysis, drawings, and performance report. For senior undergraduate students only.

Prerequisite: ME 304 and ME 302 or ME 306, Senior standing.

ME 409

Vehicle Aerodynamics (3,0)

3 Credits

Aerodynamic forces on land vehicles. Design requirements for lift, drag, stability, and safety for passengers. Cars, high-performance vehicles, commercial, and motorcycles. Noise control, heating, ventilation, and air conditioning. Engines for various vehicles are compared (such as the conventional internal combustion engine, the rotary or Wankel), for competition applications and long-life requirements such as traction engines for rail applications. Fuels and combustion, exhaust flows, emission and air pollution, fuel cell systems, hybrid vehicles. Ideas from aerospace technologies are implemented, such as jet engines for powering vehicles and the use of computational fluid dynamics codes to predict the aerodynamic performance of such vehicles. Also, future technologies such

as magnetically levitated and very high-speed mass transit systems are analyzed.

Prerequisites: ES 201, ES 204, ES 206, ES 305.

ME 410

Advanced Machine Design (2,0)

2 Credits

Design and analysis of mechanics system, for fluctuating loading. Fatigue analysis. Application of design fundamentals to mechanical components, and integration of components to form systems. Fatigue failure of systems. Mechanical design of such systems as bearings, transmission gears, springs, joints, brakes, and clutches. Indeterminate systems.

Prerequisites: ES 320, ME 304.

ME 415

Modeling and Numerical Simulations of Energy and Environmental Systems (3,0)

3 Credits

The course introduces students to the basic methods of numerical modeling for typical physical problems encountered in solid mechanics, thermal/fluid sciences, energy, and environmental systems. Students will learn how to formulate a model in terms of an algebraic or differential equation. Problems that can be solved analytically will be chosen initially and solutions will be obtained by appropriate discrete methods. Basic concepts in numerical methods, such as convergence, stability, and accuracy, will be introduced. Various computational tools will then be applied to more complex problems, with emphasis on finite element and finite difference methods, finite volume techniques, boundary element methods, and gridless Lagrangian methods. Methods of modeling convective nonlinearities, such as upwind differencing and the Simpler method, will be introduced. Discussion and structural mechanics, internal/external fluid flows, and conduction and convection heat transfer. Steady state, transient, and eigenvalue problems will be addressed with emphasis on aerospace power and environmental systems.

Prerequisites: ES 202, ES 206, ES 305, MA 345, and EGR 115.

ME 416

Robotics III (2,0)

2 Credits

This course will deal with the basics of mobile robots as they are being used to explore planets and other inaccessible areas. The focus will be on locomotion, sensors and perception, navigation and state estimation, and environment modeling. Safety and reliabil-

Undergraduate Course Descriptions

ity and other aspects of mobile robot design such as energy supply will be studied. Finally, the student will incorporate the learned material into the mobile robots available in the space systems laboratory.

Prerequisites: ME 306, AE 430.

ME 417

Advanced Propulsion (3,0)

3 Credits

This course is designed to enable the student to analyze jet engines in depth using the fundamental principles developed in AE 408/ME 309 and by extensive computer programs. Parametric engine cycle analysis will investigate both ideal and engines with losses. The performance of a particular (actual) jet engine will be analyzed to determine how its performance is affected by operational conditions (altitude, throttle positions). In addition to the turbojet, turbofan, turbo-prop, and turbo shaft family of jet engines, the scramjet will be analyzed.

Prerequisite: ME 309.

ME 420

Detail Design of Robotic Systems with Laboratory (3,3)

4 Credits

Principles of detailed robotic and mechanical design, analysis, modeling and testing are covered and incorporated into projects to give actual experience in the detail design and integration of robotic systems and subsystems. Integration of multiple mechanical, electrical and computer subsystems into a single functional model is a key component of the course..

Prerequisites: ME 404, ME 406, ME 407.

ME 421

Clean Energy Systems (3,0)

3 Credits

This course will emphasize energy systems for both stationary and transportation applications. General energy requirements will be discussed for industrialized societies and the effects of waste energy and undesired by-products. Clean energy process and minimizing the environmental effects. Examples of energy systems to be considered are fuel cells, wind energy, wave energy, geothermal energy, and solar energy.

ME 426

Propulsion III (2,0)

2 Credits

Engines to provide the propulsion for general aviation aircraft are analyzed. While the standard Otto Cycle engines using avgas have served general avia-

tion well, the fuel crisis and the environmental issues at the 14,000+ suburban airports in the U.S. have resulted in numerous proposals for new engines. The course will study the various options: electrical, diesel, rotary, turboprop, turbofan, as well as modifications to the conventional spark-ignition engine.

Prerequisites: ES 305, ME 309.

ME 429

Propulsion System Preliminary Design (3,3)

4 Credits

This course is concerned with the preliminary design of a propulsion system, components and/or group of components based on a set of vehicle or propulsion system-specific performance requirements. Students are challenged to perform the appropriate requirements analysis, select a propulsion system type and system-level design characteristics to best meet the requirements. The students will then complete a paper design of the propulsion system components, ensuring proper integration with the propulsion system and, if appropriate, the vehicle for which the system is designed.

Prerequisites: ME 417 or permission of the instructor.

Corequisite: EGR 200

ME 430L

Control Systems Laboratory (0,3)

1 Credit

This is a companion course for AE 430.

Corequisite: AE 430

ME 431

Propulsion System Detail Design (3,3)

4 Credits

This course is concerned with the design of a propulsion system component or group of components. Students are challenged to design the component(s) for the operating environment, and ensure that it will properly interface with the neighboring components. The component(s) will be manufactured on-site or by a machine shop according to student designs. Student will then test physical hardware and compare to analytical results. Emphasis is on hardware design, manufacturing and testing.

Prerequisites: ME 429 or permission of the instructor.

Corequisites: AE 416/417 and COM 430.

ME 432

Advanced Alternative Energy (3,0)

3 Credits

The course is the follow-on for ME 312 Alternative Energy. It will be tailored to support the capstone

Undergraduate Course Descriptions

design sequence in the energy engineering track of the mechanical engineering degree. The course will focus on a primary alternative energy system (e.g. wind or solar photovoltaic or solar thermal) and energy storage. Building on the knowledge gained in ME 312, greater depth in a specific system will be gained through a thorough examination of specific system components, system trade-offs, component limitations and potential component advances. The course will focus on design and optimization of an alternative power system to stationary or vehicle/craft as appropriate.

Prerequisites: ME 312.

ME 435

Energy Engineering Preliminary Design (3,3)
4 Credits

Alternative energy conceptual design principles are developed to meet specific system requirements. A complete alternative energy system will be design, resulting in an engineering design package consisting of specifications, aerodynamics and/or thermodynamic calculations, system and site drawing, weight estimate, structural analysis, control system concept, and complete performance report.

Prerequisite: ME 312

Corequisite: ME 432

ME 440

Energy Engineering Detail Design (3,3)
4 Credits

Principles of alternative energy detail and component part design, manufacture, and production are covered along with projects to give actual experience in the design of alternative energy components. The design of an alternative energy system is carried from the general layout to the design of its detail parts and testing of energy system hardware.

Prerequisite: ME 435

Military Science Army ROTC

MSL 101

Basic Military Science I (1,0)
1 Credit

A study of the defense establishment and the organization and development of the U.S. Army. A study of the roles of the active Army forces, the Army Reserve forces, and the Army National Guard play in our nation's defense. A study of the military courtesies,

customs, and traditions of the service. A historical perspective of the role of the different branches of the U.S. Army and the role they have played in the freedom of our nation. An introduction to physical readiness training. Course includes lectures and laboratory. Field training exercises normally include M16-A1 rifle firing, rappelling training, and airmobile helicopter operations.

Corequisite: MSL 101L.

MSL 101L

Basic Military Science I Laboratory (0,3)
0 Credit

Leadership laboratory with emphasis on military leadership and small unit tactics. Students develop leadership abilities through hands-on practical experiences. Training is introductory in scope and includes operations and tactics and land navigation subjects. Practical training exercises familiarize students with the field environment and field survival skills.

MSL 102

Basic Military Science II (1,0)
1 Credit

Continued emphasis on physical readiness training. Course includes lecture and laboratory. Field training exercises normally include M16-A1 rifle firing, rappelling training, and airmobile helicopter operations.

Corequisite: MSL 102L.

MSL 102L

Basic Military Science II Laboratory (0,3)
0 Credit

Leadership laboratory with emphasis on military leadership and small unit tactics. Students develop leadership abilities through hands-on practical experiences. Training continues the leader development process while remaining introductory in scope and develops basic operations and tactics and land navigation skills acquired in MSL 101L Laboratory. Practical training exercises continue cadet field orientation with the focus on individual training. Special topics, including stream-crossing techniques, field survival skills, and bivouac techniques are covered.

MSL 201

Basic Military Leadership I (2,0)
2 Credits

A review of the customs and traditions of the service. The fundamentals of leadership development and the importance of understanding the principles that are

Undergraduate Course Descriptions

important to effective leadership. This includes focus on goal setting, communication, problem solving, decision making, and group process.

Corequisite: MSL 201L.

MSL 201L

Basic Military Leadership I Laboratory (0,3)

0 Credit

Leadership laboratory with emphasis on military leadership and small unit tactics. Students develop leadership abilities through hands-on practical experiences. Training continues the development of cadet leadership and critical skills while remaining basic in scope and includes operations and tactics, land navigation, first aid, and general military subjects. Practical training exercises stress development of basic skills with the focus on soldier-team development at the squad/team level.

MSL 202

Basic Military Leadership II (2,0)

2 Credits

The fundamentals of military geography and their application in the use of navigational aids for the military forces. A study of preventive medicine countermeasures and first-aid techniques that every leader must know. The course requires mandatory physical training and includes both lecture and leadership laboratory. Two weekend training exercises normally include M16-A1 rifle firing, rappelling training, and airmobile helicopter operations.

Corequisite: MSL 202L.

MSL 202L

Basic Military Leadership II Laboratory (0,3)

0 Credit

Leadership laboratory with emphasis on military leadership and small unit tactics. Students develop leadership abilities through hands-on practical experiences, strong focus on ethics, communication skills, time management, and leadership values. Training continues basic skills acquired in MSL 201 Laboratory and includes operations and tactics and land navigation. Practical training exercises continue development of basic skills with the focus on soldier-team development at the squad/team level.

MSL 301

Officership I (3,0)

3 Credits

This course examines the foundations of officership and the character, responsibilities, and status of being a commissioned officer. It is dynamic, challenging,

and stressful, for it is the course that emphasizes the warrior ethic. The course covers a wide spectrum of subjects, from training in common military skills to fostering a value system that emphasizes service to the nation, readiness to persevere in the face of obstacles, and willingness to make personal sacrifices in pursuit of the greater good. This course includes lecture, advanced leadership laboratory, physical training, and practical field training exercises.

Prerequisites: Completed basic military science (or given constructive credit) and be a contracted Army ROTC cadet.

Corequisite: MSL 301L.

MSL 301L

Officership I Laboratory (0,3)

0 Credit

Leadership laboratory with emphasis on military leadership and small unit tactics. Students develop leadership abilities through hands-on practical experiences. Training continues development of cadet competencies and confidence through intermediate leadership and technical/tactical instruction. Practical training exercises are supplementary in scope and include operations and tactics, land navigation, and weapons training. Special topics including tactical bivouac techniques, individual tactical techniques, tactical foot march techniques, squad tactics, and small unit patrolling are covered.

MSL 302

Officership II (3,0)

3 Credits

A continuing development of the processes that distinguish commissioned military service from other professional endeavors. The main emphasis of this class will be the preparation of cadets for the six-week advanced camp they normally attend at the end of the junior year. Here their capability to conceptualize, innovate, synthesize information, and make sound decisions while under stress will be evaluated. This course includes lecture, advanced leadership laboratory, enhanced physical training, and practical field training exercises.

Corequisite: MSL 302L.

MSL 302L

Officership II Laboratory (0,3)

0 Credit

Leadership laboratory with emphasis on military leadership and small unit tactics. Students develop leadership abilities through hands-on practical experiences. Training continues development of intermediate leader and critical skills in preparation for

Undergraduate Course Descriptions

Advanced Camp. Practical training exercises focus on soldier-team development at squad/patrol level. Training is supplementary and includes tactics, land navigation, and weapons subjects. Special topics include tactical bivouac techniques, small unit patrolling, a mini-STRAC exercise, and drownproofing.

MSL 401

Advanced Military Leadership I (3,0)
3 Credits

A study of military professionalism with emphasis on command and staff relationships, organizational functions, and duties of various staff officers who assist in the leadership of the organization. A study of personnel and logistical systems and the role they play in helping the organization optimize operations and improve life in the Army community. Training in staff briefings will be used as an introduction to military procedures. This course includes lecture, laboratory, and physical readiness training.

Corequisite: MSL 401L.

MSL 401L

Advanced Military Leadership I Laboratory (0,3)
0 Credit

Leadership laboratory with emphasis on military leadership and small unit tactics. Students develop leadership abilities through hands-on practical experiences. Training culminates the leader development process at the pre-commissioning level. Training is supplementary and includes operations and tactics, land navigation, and radio wire communication subjects. Students perform as subject matter experts and are responsible for conducting and evaluating training.

MSL 402

Advanced Military Leadership II (3,0)
3 Credits

A study of ethics and professionalism in the military and the role they play in carrying out the defense policy of the U.S. The fundamentals of military law, its impact on the American military society, and its place in the jurisdictional system. A history of the military courts martial as it relates to the jurisdictional process of American society. A study of the Law of Land Warfare and its relationship to the conduct of soldiers in combat. This course includes lecture, laboratory, and physical readiness training.

Corequisite: MSL 402L.

MSL 402L

Advanced Military Leadership II
Laboratory (0,3)
0 Credit

Leadership laboratory with emphasis on military leadership and small unit tactics. Students develop leadership abilities through hands-on practical experiences. Training culminates development of leader skills emphasizing the transition from cadet to second lieutenant. Expands the frame of reference and gradually shifts it to orient on future assignments as an officer. Training is supplementary and includes operations and tactics, land navigation, and radio wire communication subjects. Students perform as subject matter experts and are responsible for conducting and evaluating training.

MSL 199-499

Special Topics in Military Science (3,0)
1-3 Credits

Individual independent or directed studies of selected topics in general military science.

Prerequisites: Consent of instructor and approval of professor of military science.

Physical Science

PS 101

Basic Chemistry (3,1.5)
3 Credits

This course is a study of elementary chemical theory. It covers basic atomic theory, elements, compounds, and mixtures, calculation of weight and weight volume relationships, basic descriptive chemistry and one 1.5 hour lab session per week. (Cannot be used for credit in chemistry toward degrees in Aerospace or Electrical Engineering.) Passing grade required for Lab. Students who take PS 108 may not also take PS 101.

Prerequisite: MA 111 or *corequisite:* MA 140.

PS 102

Explorations in Physics (3,0)
3 Credits

Survey course in elementary physics. Stress will be placed on basic concepts, principles and history of the development of physics. Presentation will include selected topics in mechanics, heat, light, sound, electricity and magnetism, and modern physics. (Cannot be used for credit in physics toward degrees in Aerospace or Electrical Engineering, Space Physics,

Undergraduate Course Descriptions

Aircraft Engineering Technology, Aeronautical Science, or Avionics Technology.)

Prerequisite: MA 111.

PS 105

General Chemistry I (3,3)

4 Credits

Fundamental principles of chemistry that include nomenclature, stoichiometry, atomic structure, periodic relationships, chemical bonding, geometry of molecules, properties of gases, solutions, and an introduction to organic chemistry. Laboratory includes both descriptive and quantitative work.

Prerequisites: High school chemistry or PS 101 and MA 140 or MA 111 or MA 120 or their equivalents.

PS 106

General Chemistry II (3,3)

4 Credits

Chemical principles that include thermodynamics, acids and bases, rates of reaction, electrochemistry, organic chemistry, synthetic materials.

Prerequisite: PS 105.

PS 107

Elements of Biological Science (3,0)

3 Credits

An introductory science course in general biology. Emphasis is placed on human anatomy and on the chemical and biological foundations of human physiology. Provides background material that supports life science applications courses.

PS 108

Contemporary Chemistry (3,1)

3 Credits

Elementary chemical theory. The origins and development of chemistry with an overview of the present applications of chemistry and its future potential in human affairs. Applications to scientific decision-making in the business and industrial environment. One one-hour laboratory session per week. Students who take PS 108 may not also take PS 101.

PS 113

Introductory Physics I (3,0)

3 Credits

Survey Course in elementary physics. Stress will be placed on basic physics principles. Problem solving and problem solving logic will be an important, integral part of this course. Topics will include Newton's Laws, projectile motion, circular motion,

work, energy, conservation laws, and momentum. (Cannot be used for credit in physics toward degrees in Aerospace Engineering, Electrical Engineering, or Aircraft Engineering Technology.)

Prerequisites: MA 111 or MA 120 or MA 140

Corequisite: MA 112 or MA 220 or MA 241.

PS 114

Introductory Physics II (3,2.5)

4 Credits

Application of basics physics principles discussed in PS 113. Other areas will include fluids, properties of matter, thermodynamics, wave motion, sound, simple harmonic motion, kinetic theory, basic electromagnetic theory and elementary circuits. Laboratory includes both descriptive and quantitative work. (Cannot be used for credit in physics toward degree in Aerospace Engineering, Electrical Engineering, or Aircraft Engineering Technology.)

Prerequisites: PS 113, MA 112 or MA 220 or MA 241.

Corequisite: PS 114L.

PS 140

Chemistry for Engineers (4,0)

4 Credits

Chemical stoichiometry, states of matter, solutions, thermodynamics, rate of reaction, equilibrium, oxidation-reduction, corrosion, organic compounds, and polymers.

Prerequisite: High school chemistry or PS 101.

Corequisite: PS 141.

PS 141

Chemistry for Engineers Laboratory (0,3)

1 Credit

One three-hour laboratory session per week, with experiments paralleling the material of PS 140.

Corequisite: PS 140.

PS 150

Physics for Engineers I (3,0)

3 Credits

Vectors and scalar quantities, geometrical optics, kinematics, Newton's Laws of Motion, work, work-energy, conservation of energy, conservation of momentum, center of mass and its motion.

Corequisite: MA 241.

Undergraduate Course Descriptions

PS 160

Physics for Engineers II (3,0)

3 Credits

This is a calculus-based study of the fundamental principles of classical mechanics and topics include, rotational motion, simple harmonic motion, waves, fluid, heat, kinetic energy, and thermodynamics.

Prerequisite: PS 150.

Corequisite: MA 242.

PS 204

General Astronomy (3,0)

3 Credits

An introductory course in astronomy, primarily intended for Space Physics majors. Topics include the history of astronomy, celestial mechanics, light and spectra, telescopes, the solar system, and exoplanets. Includes night observing sessions.

Prerequisite: PS 160 or PS 208.

PS 208

Physics II (3,0)

3 Credits

Fluids, temperature, heat, first and second laws of thermodynamics, wave motion, acoustics.

Prerequisites: MA 241, PS 215.

Corequisite: MA 242.

PS 215

Physics I (3,0)

3 Credits

Estimations, order of magnitude analysis, Newton's Law, gravitation, kinematics, work and energy, momentum, rotation, harmonic motion.

Corequisite: MA 241.

PS 216

Physics I Laboratory (0,3)

1 Credit

One three-hour laboratory session per week, with experiments chosen primarily from mechanics.

Corequisite: PS 215.

PS 219

Physics III (3,0)

3 Credits

Static electricity, Gauss's law, potential, Ohm's law, direct current circuits, magnetic fields, induced elec-

tromotive force, induction, EM waves, the nature of light, alternating circuits.

Prerequisites: PS 208, PS 221, MA 242.

Corequisite: MA 243.

PS 221

Intermediate Physics Laboratory (0,6)

2 Credits

Two three-hour laboratory sessions per week with experiments chosen primarily from wave motion, thermodynamics, electricity, magnetism, and geometric optics.

Prerequisites: PS 215, PS 216.

Corequisites: MA 242, PS 208.

PS 232

Computational Methods in the Physical Sciences (3,0)

3 Credits

This course is designed to teach students the computational methods used in physics and the physical sciences. Students will learn the techniques required to solve complex problems in physics and display their graphical representations using both structured and symbolic math programming languages. Students will also learn data reduction and error analysis techniques, fitting linear and non-linear functions, minimizing chi-square, and interpreting error matrices.

Prerequisites: MA 241, PS 215.

Corequisites: MA 242, PS 208.

PS 250

Physics III for Engineers (3,0)

3 Credits

This course is a calculus-based study of the fundamental principles of classical mechanics. It is the third course of a three-semester sequence, intended for students of science and engineering and is designed to provide the student with an appropriate background for more advanced physics and engineering course work. Topics of discussion include; electric forces, electric field, Gauss's law, Ohm's law Ampere's law, Faraday's law, Lenz's law, Kirchoff's' law and Maxwell's equations; electric potential and electrostatic potential energy; capacitance; simple DC circuit theory; magnetic force, magnetic field; inductance; electromagnetic oscillations and wave propagation; Linear accelerators, cyclotrons.

Prerequisites: MA 242, PS 160.

Undergraduate Course Descriptions

PS 253

Physics Laboratory for Engineers (0,3)

1 Credit

One three hour laboratory session per week, with experiments complementing the material of PS 250. Primarily lab report writing workshop, error analysis, damped harmonic oscillations, spectrometers, optics, atomic physics, thermodynamics and circuit theory
Corequisite: PS 250.

PS 302

Evolution of Scientific Thought (3,0)

3 Credits

This course traces the development of science from the earliest times through the modern period, with particular emphasis given to our changing concepts of nature and of science itself. Students will receive either social science elective credit or physical science elective credit, but not both.

Prerequisites: Either HU 140 or HU 141 or HU 142 and either PS 101 or PS 102 or PS 103 or PS 150 or PS 215.

PS 303

Modern Physics (3,0)

3 Credits

This is an introductory course in non-classical (modern) physics, it introduces students to the modern concepts in physics. Topics discussed include; scattering of electromagnetic radiation, special relativity, wave-particle duality, the uncertainty principle and quantum theory of atomic structure, x-rays, lasers and nuclear reactions.

Prerequisites: PS 219 or PS 250

PS 314

Environmental Chemistry (3,3)

4 Credits

This course is an introduction to the chemistry of natural systems, including cycling of elements, complex equilibria, oxidation and reduction, atmospheric chemistry, nuclear processes, energy use, and toxic substances. Laboratory work includes wet and instrumental analyses related to environmental analytical chemistry.

Prerequisite: PS 106.

PS 315

Modern Physics Laboratory (0,6)

2 Credits

Experiments in atomic and nuclear physics, including spectroscopy, nuclear particle analysis, X-ray analysis, and laser applications.

Prerequisite: PS 221.

Corequisite: PS 303.

PS 321

Classical Mechanics I (3,0)

3 Credits

Fundamentals of mechanics, oscillatory motion, systems of particles, varying mass, motion under central forces, motion in three dimensions, gyroscopic motion, generalized coordinates, normal coordinates, Lagrangian and Hamiltonian formulations. Students will write some simple computer programs.

Prerequisites: MA 345, PS 219, PS 303.

Corequisite: PS 232.

PS 322

Classical Mechanics II (3,0)

Advanced mechanics; celestial/orbital mechanics; dynamics of rigid bodies and systems of particles; non-inertial motion and gyroscopic motion; coupled oscillations; dynamics of continuous media and wave phenomena. Special theory of relativity. Students will write some simple computer programs.

Prerequisites: PS 321.

PS 330

Electricity and Magnetism I (3,0)

3 Credits

Solutions of electrostatics problems using Poisson's equation and Laplace's equation, electrostatic energy, electric current, magnetic field, electromagnetic induction, physics of plasmas, Maxwell's equations, and application of Maxwell's equations (reflection, refraction, waveguides, antenna radiation). Students will write some simple computer programs.

Prerequisite: PS 303, MA 345.

Corequisite: MA 441.

PS 331

Electricity and Magnetism II (3,0)

An advanced undergraduate course in electromagnetism emphasizing electromagnetic radiation and culminating with the relativistic formulation of electrodynamics. Topics covered include electromagnetic waves, waveguides, scalar and vector potentials,

Undergraduate Course Descriptions

retarded potentials, the fields of a moving charge, dipole radiation, radiation reaction, and relativistic electrodynamics.

Prerequisites: PS 330.

Corequisite: MA 442.

PS 340

Astrophysics I (3,0)

3 Credits

Study of the basic physical processes operating in the astronomical environment, stellar structure and evolution, the interstellar medium, galaxies, and cosmology. Astrophysical concepts are emphasized, thus underlining the common features operating in many astronomical systems.

Prerequisites: PS 204, PS 303, MA 345.

PS 350

Quantum Mechanics I (3,0)

3 Credits

The Schrodinger equation in one and three dimensions and its solutions for step potentials, the harmonic oscillator, and the hydrogen atom. Operators and their matrix representations: Dirac bracket formalism, angular momentum and spin, spin-orbit interaction. Identical particles and exchange symmetries. Time-independent and time-dependent perturbation theory and approximation methods: transition rates, Fermi's rule, scattering theory. Classical and quantum statistical distributions.

Prerequisite: PS 303 and MA 441.

Corequisite: MA 442.

PS 375

Planetary Science (3,0)

3 Credits

Study of the planetary system: origin, evolution, composition, present configuration, dynamics, interiors, surfaces, atmospheres, and magnetospheres of the planets and, where appropriate, similar aspects of the satellites, asteroids, and comets. Interpretations of existing data and definition of future experiments to aid in determination of the origin and evolution of the solar system are stressed.

Prerequisites: PS 303, PS 330.

PS 380

Optics Laboratory (1,3)

3 Credits

Study of geometrical and physical optics including plane waves, mirrors, lenses, emission and absorp-

tion line spectroscopy, diffraction gratings, lasers, and interferometers.

Prerequisites: PS 315.

PS 405

Atomic and Nuclear Physics (3,0)

3 Credits

This course is a study of multi-electron atoms, x-rays and gamma rays, and radiative transitions in the atom and the nucleus. Topics include time-independent and time-dependent perturbation theory, scattering and the Born approximation, basic properties of nuclei, systematics of nuclear stability, dynamics of nuclear reactions, nuclear models and nuclear forces.

Prerequisite: PS 350.

PS 408

Astrophysics II (3,0)

3 Credits

Radiative transfer in astrophysical environments; stellar atmospheres, stellar interiors, and gaseous nebulae. Emission and absorption processes. Interaction of radiation with matter.

Prerequisite: PS 340.

PS 412

Particle Physics and Cosmology I (3,0)

3 Credits

Study of modern particle physics and the foundations of general relativity including special relativity and Minkowski spacetime, particle collisions and conservation laws, the Standard Model of particle physics, and introduction to classical and quantum scattering theory.

Prerequisites: PS 350, MA 442

PS 413

Particle Physics and Cosmology II (3,0)

3 Credits

Study of the theory of general relativity and modern cosmology including the Einstein field equations and special solutions, Big Bang cosmology, dark matter, dark energy, and inflation.

Prerequisite: PS 412.

PS 420

Remote Sensing (3,0)

3 Credits

This course investigates the current technologies used in remote sensing. It emphasizes the scientific principles used in look-down satellite technologies, the same principles used in deep-space probes and non-

Undergraduate Course Descriptions

invasive medical imaging. This course uses a physics-based approach to designing and developing remote sensing methodologies using the visible, infrared, and microwave spectrum. Students will learn to characterize target phenomenology from sensor system specifications to data modeling, collection, and analysis.

Prerequisite: MA 441.

Corequisite: PS 405.

PS 422

Space Propulsion (3,0)

3 Credits

The course provides the student with an introduction to the basic principles of liquid and solid propulsion systems. Flight performance parameters are presented for single and multistage vehicles. The thermo-chemistry of the combustion process will also be discussed. Performance enhancements of nuclear rockets and electric propulsion will be covered.

Prerequisites: PS 105 and PS 405.

PS 430

Thermodynamics and Statistical Mechanics (3,0)

3 Credits

Basic thermodynamics, entropy, kinetic theory, distribution of molecular velocities, Maxwell-Boltzmann statistics, Bose-Einstein statistics, Fermi-Dirac statistics, microcanonical ensemble, canonical ensemble.

Prerequisite: PS 303.

PS 451

Quantum Mechanics II (3,0)

3 Credits

Multiparticle wave functions, second quantization, creation and annihilation operators, commutation relations, representations of one and two-body operators, simple applications, Wick's Theorem, and Hartree-Fock theory.

Prerequisite: PS 350.

PS 490

Senior Research Thesis, Part I (2,3)

3 Credits

First semester optional capstone course for senior Space Physics students. Students will begin their senior research project in an area of interest that overlaps the interest of the supervising faculty.

Prerequisites: PS 350, MA 442, AND a cumulative ERAU GPA of 3.5 or greater OR a grade of B or better in each of the following: PS 321, PS 330, PS 340, PS 350, and PS 380.

PS 491

Senior Research Thesis, Part II (1,6)

3 Credits

Second semester optional capstone course for senior Space Physics students. Students will complete their senior research project culminating in a research paper that follows an accepted scientific publishing format.

Prerequisite: PS 490.

PS 199 - 499

Special Topics in Physical Science

1-4 Credits

Individual independent or directed study of topics in the fields of the physical sciences impinging on aerospace development or practices that are of current or anticipated interest.

Prerequisites: Consent of instructor and approval of the department chair.

Psychology

PSY 101

Introduction to Psychology (3,0)

3 Credits

This course will introduce the student to the field of psychology, and is a survey of the bio-psychosocial continuum and the intra-psychic, interpersonal, and organizational factors affecting human behavior. A primary feature of the course is its focus on the scientific method as the route to psychological knowledge. Students examine the rationalist, empiricist and experimental foundations of the scientific method and how these foundations can be critiqued. Topics include sensation, perception, learning, motivation, emotion, memory, personality, psychopathology, physiological psychology and social processes. Emphasis is placed on the application of the basic principles of psychology to engineering, aviation, public policy and business

PSY 350

Social Psychology (3,0)

3 Credits

This course is intended to provide students with an introduction to the interactional forces between groups and the individual in society. Topics include the following: introduction to social psychology, group influence, the self in a social world, prejudice-disliking others, social beliefs and judgments,

Undergraduate Course Descriptions

attraction and intimacy, genes, culture and gender, altruism-helping others, conformity, and persuasion.

Prerequisite: PSY 101.

PSY 365

Abnormal Psychology (3,0)

3 Credits

This course is intended to familiarize students with theory and research on biological, cognitive-behavioral, and social-family perspectives and interventions of psychological disorders as problems that affect nearly everyone. Its emphasis on the research process, family issues and the line between normal and abnormal behavior is intended to encourage students to think critically about social and personal issues and to understand the strategies, methodologies and applicability of research in abnormal psychology.

Prerequisite: PSY 101.

Regional Studies

Note: Regional Studies (RS) courses are also considered Humanities (HU) courses and can be taken as Humanities electives.

RS 200

Modern Asia (3,0)

3 Credits

A survey course of the major political, economic, cultural, and historical changes in Asia since the 19th century. A regional and/or thematic focus may be created depending on the instructor's expertise. For example, an instructor may focus on East Asia rather than South Asia, on history rather than economy.

Prerequisites: HU 14X and sophomore standing or consent of instructor.

RS 300

Observing Asian Cultures (3,0)

3 Credits

An interdisciplinary course that takes an anthropological, philosophical, and geographical approach to traveling in Asia. Topics include geographical changes in Asia, philosophical issues of travel, and the theory and methodology of studying other cultures and societies. The course culminates in an optional yet strongly recommended field trip to an Asian country.

Prerequisite: Sophomore standing or consent of the instructor.

Note: This course is only offered once every other year.

RS 305

Asian Literature (3,0)

3 Credits

Asian literature in translation. Representative readings are chosen from ancient times to the present, from poetry to prose, from female writers to male writers, from South Asia to East Asia. Synthesis of major literary themes and development, as well as the cultural contexts for literature, is an important part of the course. The course uses both books and films as study material. A regional and/or thematic focus may be created depending on the instructor's expertise. For example, an instructor may focus on East Asia rather than South Asia, on prose rather than drama.

Prerequisite: Sophomore standing or consent of the instructor.

RS 306

Studies in Middle Eastern History and Culture (3,0)

3 Credits

This is an introductory survey to the history of the Middle East, politics, and diplomacy of the Israeli-Palestinian conflict. The students will be introduced to the challenges of politics in the Middle East and will develop their appreciation and better understanding of the historical events that led to establishment of the State of Israel, the Palestinian Authority, several wars, population displacement, terrorism, outstanding questions in the peace process, links between the Arab-Israel dispute and the Gulf/Islamic world. The course will also cover the expanding role of religion in the Middle East.

Prerequisite: Sophomore status or consent of the instructor.

RS 307

Islam and Arabic Culture (3,0)

3 Credits

An interdisciplinary course that explores the basics of Islam and aspects of Arabic culture. The Arab-Islamic culture has two main sources for legislation: the Holy Qur'an and the Sunna of the Prophet. There are other moral and social teachings from Pre-Islamic Arabia that have lasted and are part of the Arabic culture today such as the Bedouin code of ethics; however, the Holy Qur'an is the principal source of the Arab-Islamic culture and constitutes the framework that charts Arabic character and aspirations.

Prerequisite: Sophomore status or consent of the instructor.

Undergraduate Course Descriptions

RS 299 - 499

Special Topics in Regional Studies

1-6 Credits

Individual independent or directed studies of selected topics in Regional Studies.

Prerequisite: Consent of instructor and approval of department chair.

Software Engineering

SE 300

Software Engineering Practices (3,0)

3 Credits

This variable credit course introduces students to the fundamental principles and methodologies of large-scale software development. Students learn about the theory and practice of software engineering and work as part of a team on a full life-cycle software project that includes planning, software specification, software design, coding, inspections, and testing.

Prerequisite: CS 125.

SE 310

Analysis and Design of Software Systems (3,0)

3 Credits

This course focuses on the fundamental methods employed in the analysis and design of software systems. Analysis is the process of determining a complete and consistent set of system requirements. Design is the process of producing a system architecture, both logical and physical, and determining an appropriate way to construct the software. The result of these processes is a documented model of the desired system. The student will learn and practice methods appropriate for both object-oriented and procedural systems.

Prerequisites: CS 315, SE 300.

SE 450

Software Team Project I (2,3)

3 Credits

This is the first course in the sequence of a two-course senior project (SE 450 and SE 451). The senior project sequence of courses is the continuation of SE 300. They provide for additional student activities with the management, analysis, design, implementation, and testing of a software system. Students work in teams and use a defined software process to develop or modify a software product. Project work is assessed using industrial software standards and review techniques. The senior project sequence is considered

the capstone course for undergraduate students in software engineering. The first course in this sequence (SE 450) emphasizes the early stages of the software development life cycle (requirements, analysis, and design). The artifacts developed during this course will be used as the foundation for further development during the second course in the sequence (SE 451).

Prerequisites: Senior standing, SE 310, SE 320.

SE 299 - 499

Special Topics in Software Engineering

1-6 Credits

Individual independent or directed studies of selected topics in software engineering.

Prerequisites: Consent of the instructor and the department chair.

Safety Science

SF 201

Introduction to Health, Occupational and Transportation Safety (3,0)

3 Credits

This course introduces the student to the field of safety and covers basic health, safety and regulatory issues that apply to aviation and non-aviation business in the United States. Included is a comprehensive health and safety overview of legislative development and enactment of appropriate statutes, regulations and laws. This course also provides an introduction to hazard recognition, reporting, analysis and control used in risk management and accident prevention. Additional topics include accident investigation, safety data statistics, ergonomics, security and emergency preparedness, safety culture, aircraft systems, air traffic control and workers' compensation. This course reviews theories, applications and practices of the field of safety.

SF 205

Principles of Accident Investigation (3,0)

3 Credits

This course is an introduction to the process required for the investigation of accidents. Topics will include different methods of accident investigation, such as root cause analysis and Management Oversight Risk Tree (MORT), among others. Further topics will include filing appropriate accident reports and applications of corrective actions.

Undergraduate Course Descriptions

SF 210

Introduction to Aerospace Safety (3,0)

3 Credits

This course provides an introduction and overview of the theories, concepts, applications, and practices of the field of aerospace safety. This course is designed for the beginning aviation safety student and covers topics such as human factors, mechanical factors, accident investigation, safety programs, and safety statistics.

SF 315

Environmental Compliance and Safety

3 Credits

This course examines matters associated with health and safety relating to the environment including air, water quality and sanitation. Areas of concentration include hazardous materials, their storage, handling, and transportation. Additional study includes waste management and cleanup as well as a detailed study of environmental laws, regulations, and protection of workers involved in activities associated with hazardous material activities.

SF 320

Human Factors in Aviation Safety (3,0)

3 Credits

This course focuses on the major human causative agent in aircraft accidents: the human being. Emphasis is placed on the psychological and physiological factors that enhance the accident probability. Included is a detailed analysis of ergonomics (human engineering) and its influence in aviation design.

SF 325

Human Factors and Ergonomics I (3,0)

3 Credits

This course is an introduction to cognitive and physical ergonomics. Topics will include musculoskeletal anatomy and physiology, anatomy and physiology of the perceptual system, and basic introduction to perception, experimental psychology, and cognitive psychology. Applications will include design of both the physical and cognitive interfaces with the work environment.

SF 326

System Safety (3,0)

3 Credits

This course will emphasize the specialized integration of safety skills and resources into all phases of a system's life cycle. Topics will include qualitative and

quantitative tools and techniques for system analysis and design applied to accident analysis, prevention, and mitigation.

Prerequisites: SF 210, MA 222.

SF 330

Aircraft Accident Investigation (3,0)

3 Credits

This course is a detailed evaluation of methods and procedures involved in aircraft accident investigation. The organization, duties and procedures of the Aircraft Accident Investigation Board are analyzed. The student explores procedures for determining accident causes through analysis for such elements as the function and techniques employed by the trained accident investigator and the role of the specialized laboratory. Analysis is also made of reporting procedures and the all-important follow-up work designed to avoid similar or related aircraft accidents.

Prerequisite: SF 201 or SF 210 or approval.

SF 335

Mechanical and Structural Factors in Aviation Safety (3,0)

3 Credits

This course examines the influence that design, manufacturing, metallurgy, and maintenance have on aircraft accidents. A detailed analysis of the failure process will be conducted. Additional topics of discussion include: stress and design loading, fatigue, corrosion, and the envelope of operation.

Prerequisite: SF 330.

SF 341

Safety and Security of

Airport Ground Operations (3,0)

3 credits

This innovative course discusses general aviation airport ground operations, particularly from the pilot and ramp worker perspectives. Focus will be on increasing awareness of airport operations and improving airport safety by creating an enhanced awareness of rules, policies, procedures, and potential hazards that affect the safety and security of aircraft, crew, passengers, and others within the airport ground operations environment. Specific topics include aircraft marshaling procedures, airfield security issues, ground vehicle operations, and accident/incident response and reporting.

Undergraduate Course Descriptions

SF 345

Safety Program Management (3,0)

3 Credits

A study of the principles of the development and management of an effective safety program. The philosophy and historical development of major concepts are examined with particular emphasis on areas of special concern in organizational accident prevention. Students analyze the influence of morale, education, and training, the role of the supervisor, and other substantial program elements of value to the safety manager.

Prerequisite: SF 201 or SF 210 or approval.

SF 350

Aircraft Crash and Emergency Management (3,0)

3 Credits

Theory, practices and techniques utilized in the response phase of aircraft crashes and emergencies are examined. This course is designed as a "real world" introduction to the field of emergency response at the CFR agency level, the airport response and administration levels and the related and associated entities involved in aircraft mishaps.

Prerequisite: SF 201 or approval.

SF 355

Industrial Hygiene and Toxicology (3,0)

3 Credits

This course focuses on the evaluation of principles associated with industrial hygiene. Topics include recognition, evaluation and control of hazards related to noise, vibration, ionizing and non-ionizing radiation, thermal conditions, pressure, chemicals, airborne contaminants, and biological substances. These subjects will be discussed in relation to all regulatory requirements, using both engineering and non-engineering controls for reducing or eliminating health hazards in the workplace.

SF 375

Propulsion Plant Investigation (3,0)

3 Credits

A technical course in aircraft reciprocating and turbine engine fundamentals and relevant accident investigative procedures. Areas of study include basic construction and design with emphasis on major sections, components, and their mechanical relationships. Power plant systems and system mishap investigation is also covered and includes fuel, lubrication, ignition, and start systems. A study of propeller basics and investigative techniques is also included. On-site field

investigation as well as engine tear down/disassembly procedures are presented.

Prerequisite: SF 330.

SF 405

Applications in Industrial Hygiene (3,0)

3 Credits

This course advances and expands on the concepts discussed in SF 355 and emphasizes the measurement and evaluation of workplace health hazards. Design and regulatory compliance of environments in office settings and manufacturing environments are addressed. Students develop and/or evaluate industrial hygiene programs for selected industries.

Prerequisite: SF 355 or approval.

SF 410

Design of Engineering Hazard Controls (3,0)

3 Credits

This course addresses the application of scientific and engineering principles and methods to achieve optimum safety and health through the analysis and design of processes, equipment, products, facilities, operations, and environments. Subjects will include product design, plant layout, construction maintenance, pressure vessels, and transportation vehicles and systems. These subjects will be discussed in relation to all regulatory requirements.

Prerequisite:

SF 420

Analysis of Observational Data (3,0)

3 Credits

Methods for the analysis of observational data are primarily drawn from the discipline of epidemiology. This will include a set of heuristics and quantitative methods used to analyze the distributions of events (diseases, crashes, fatalities, etc.) in populations to infer the causes of those events. This course is a survey of these quantitative methods with an emphasis on occupational applications. Topics will include rates, standardized mortality ratios, methods of assessing agreement, case-control studies, cohort studies, recognizing and assessing causes of error, and advanced techniques in observational data analysis.

Prerequisite: MA 222.

SF 425

Human Factors and Ergonomics II (3,0)

3 Credits

This course is an extension of Human Factors and Ergonomics I and will provide greater depth in such topics as biomechanics, work physiology, ergonomics

Undergraduate Course Descriptions

field methods, psycho physical methods, signal detection theory, information theory and human error/reliability.

Prerequisite: SF 325.

SF 435

Aircraft Crash Survival Analysis and Design (3,0)
3 Credits

An in-depth analysis of the accident environment with particular emphasis on the protection of the occupants. The injury mechanisms and causes will be analyzed, as will the physics and kinematics of the impact sequence. The intent of the course is to familiarize the student with what can be done to minimize the effects of an accident.

Prerequisite: SF 335 or approval.

SF 440

Design of Engineering Hazard Controls II (3,0)
3 Credits

This course covers all relevant standards and regulations related to construction together with the development and implementation of construction safety programs. OSHA Standards 29 CFR 1926 and work methods design will serve as a basis for this course.

Prerequisite: SF 201 or approval.

SF 445

System Safety in Aviation (3,0)
3 Credits

This course entails specialized integration of skills and resources in all phases of the life cycle of a given system in furtherance of accident prevention. Its heritage is systems engineering and management theory but it is amplified to include modern safety practices derived from numerous disciplines. Accordingly, this course reviews the development and implementation of system safety technology in aviation, both civil and military. Students will acquire an understanding of how accident prevention is designed into an aircraft under development, evaluated and enhanced during flight test, and ensured or otherwise controlled during operational use. This learning is juxtaposed with other elements of the total aviation system.

SF 462

Health, Safety and Aviation Law (3,0)
3 Credits

This course introduces the student to the legal issues and concerns confronting the health and safety industry. Included is an overview of the historical legal precedence established for the aviation industry, as well as comprehensive examination of laws, regulations

and legislation that govern the actions and authority of the health and safety professional. This course also provides an introduction to the governing bodies and associations that are tasked with setting the legal standards by which the industry must operate, including the scope and level of their authority.

SF 475

Senior Project (3,0)
3 Credits

This course requires senior-level students to conduct research in a safety-related topic of his or her choosing under the direction of a faculty member.

SF 299 - 499

Special Topics in Aviation Safety
1-3 Credits

Individual independent or directed studies of selected topics in aviation or non-aviation safety topics.

Prerequisites: Approval of program chair and department chair, consent of instructor, and 12 hours of SF courses.

Global Security and Intelligence Studies

SIS 100

Introduction to Global Security and Intelligence Studies (3,0)
3 Credits

SIS 100 is the introductory course for the Global Security and Intelligence Studies program. It discusses the whole range of contemporary international issues, from questions of realism versus idealism in foreign affairs, to changes in the nation-state, the implications of climate change, the proliferation of weapons of mass destruction, international development, the rise of China, and international public health. The course requires the student to closely follow breaking international developments and learn to discuss these objectively and analytically. An important emphasis throughout the course is for the student to learn and demonstrate critical thinking and imagination.

SIS 200

Introduction to the U.S. Legal System (3,0)
3 Credits

This course will provide a general overview of the legal system in the U.S. It is a core course for the GSIS program, designed to give the student a foundation in legal theory and philosophy, the sources of law, the

Undergraduate Course Descriptions

place of the judicial system in the U.S., the structure of the courts, original through appellate jurisdiction, judicial review, the role of the legal profession, the structure of civil and criminal cases, the adversarial process, constitutional law and protections, and the application of law to security and intelligence issues.

Prerequisite: *College-level history or permission of the instructor.*

SIS 210

Security Fundamentals (3,0)

3 Credits

This course provides students with a familiarity with the general concepts of security, threat assessment, personal security, physical security and information security both in the government and private sectors. Students will learn the importance of applying proper security protection measures to protect an organizations personnel, physical assets, and sensitive information. Students will learn the basic personnel security screening methods, the general types of security equipment and its protective applications, the ways of protecting both sensitive information and computer systems storing and transmitting such information. The students will also learn the basic methodology for conducting investigations in private and government organizations.

SIS 260

Forensic Science Applications in Security and Intelligence (3,1)

4 Credits

During this course students will learn the basic scientific principles and concepts underlying the use of forensic science in law enforcement, security, and intelligence. Students will become familiar with the various forensic techniques and their application in real-life situations. They will accomplish these learning objectives through a combination of academic work, practical field applications, and laboratory studies. The course material will focus on the available scientific equipment and tests employed in forensic science and their practical applications in criminal justice, civil proceedings, identification and intelligence analysis and confirmation. The students will learn the methodology employed in preserving a crime scene, collecting physical evidence, transporting and storing such evidence. The students will also review the various biological and chemical tests that could be employed to examine such evidence including their individual applicability, cost, and validity. The course will also address the legal issues arising from the use of existing and evolving forensic science techniques in legal proceedings. Throughout the course, students

will discuss the professional, legal, and ethical issues surrounding forensic science applications in law enforcement, security, and intelligence applications. This course includes a laboratory limiting its enrollment to 20 students. This course may be credited toward the Physical and Life Sciences requirement or as one of the Designated Electives.

Prerequisite: *AES 111, or AES 112 or equivalent basic biology course with a lab, or instructor's approval.*

SIS 312

Global Crime and International Justice Systems (3,0)

3 Credits

This course presents the current status and future trends in global crime and criminal justice systemic approaches to combating global crime. First, the course describes the rise of novel criminal activities in the context of globalization as well as the influence of globalization on pre-existing criminal activities. Second, the course describes globalization's effects on the structure, function, and process of criminal justice systems. Third, the course explores the reciprocal interactive and contextual relationships between global crime and criminal justice systems. The course emphasizes global, multicultural, and world historical perspectives of crime to professionally and personally prepare students for the challenge of 21st century life.

Prerequisites: *SS 204, SS 327, SS 312, and SIS 200 or permission of the instructor.*

SIS 315

Studies in Global Intelligence I (3,0)

3 Credits

This course will examine the uses of strategic intelligence by world leaders in shaping policy and the effects of strategic intelligence on world events. Issues to be covered include theoretical models of strategic intelligence; intelligence collection, evaluation, analysis, production, and dissemination; intelligence oversight; covert and clandestine operations; intelligence bureaucracies; ethical and moral issues in intelligence; counterintelligence. The course emphasizes strategic intelligence in the business, political, military, scientific, and technological domains.

Prerequisite: *COM 223 or permission of the instructor.*

SIS 317

Political Change, Revolution, and War (3,0)

3 Credits

This course is designed to familiarize the intelligence professional with how major events and systemic changes occur in the international system through wars and revolutions. It also examines political

Undergraduate Course Descriptions

changes that occur in a slower, more evolutionary way. In both cases, the approach is through a study of historical and contemporary examples. The signals that political systems give off as they approach major structural change are examined in some detail, as are the structures of revolutions and conventional and unconventional wars, including asymmetrical wars. Social and economic trends that shape more evolutionary political change are also studied. All forms of change in the international system are of importance to the intelligence analyst, who must warn the policy community of anticipated developments of importance to the government and, subsequently, explain the implications of what has occurred. The course will enable the student to understand predictive analysis and modeling and provide analytical tools with which to deal with changing events.

Prerequisites: SIS 315 or SS 327 or SS 340.

SIS 320

Topics in Global History, Politics, and Culture (3,0)
3 Credits

This course provides the student with an opportunity to focus more deeply on a region of the world, a particular culture or period in history, or a specific international problem. The topic covered by the course in a particular semester will vary according to student and program needs. The regions to be covered on an as-needed basis will include Europe, Latin America, the Middle East, Africa, and Asia. Alternatively, the course could focus on a topic such as Islam in the contemporary world, the weaponization of space, the implications of world migratory patterns, changing issues in international development, or the spread and implications of pandemics. Students may repeat the course in order to study another region or topical area.

Prerequisites: SS 110 or LCH 400, or permission of the instructor.

SIS 323

Intelligence and Technology (3,0)
3 Credits

This course will examine the whole arena of intelligence and technology, beginning with the World War II period, when science and technology came to play a critical role in intelligence. The course will cover technical intelligence-collection methodologies and systems, the use of aircraft and space-based vehicles as collection platforms for photo-optical and digital imagery, radar imaging, infrared and multi-spectral imagery, signals intelligence, etc. The course will provide a technical understanding of these methodologies, as well as an analysis of their place in all-source collection. The course will also examine the current

development and implications of intelligence technologies, such as the emergent UAV systems.

Prerequisite: SIS 315 or permission of the instructor.

SIS 325

History of Terrorism (3,0)
3 Credits

This course will introduce the student to the history of terrorism, from the 19th century up to the present day. It will evaluate the causes of terrorism, the capabilities and limitations of terrorist groups, the requisites of effective counterterrorism responses, and the future prospects of terrorism. It will address the implications of terrorism and asymmetrical warfare for U.S. national security, including the possible use of weapons of mass destruction. The constitutional and legal implications of counterterrorist strategies will also be discussed. It will examine the organization, objectives, and methodologies of key terrorist groups operating in the 21st century, particularly those showing ideological hardening, religious revivalism, and ethnic militancy.

Prerequisites: SIS 100, SS 110 or LCH 400.

SIS 326

Personal Security and Defensive Skills (3,0)
3 Credits

Basic instruction in personal security through historical, technological, and practical education and training in the art and science of personal security awareness and defense for the professional. A comprehensive education on firearms history, laws, mechanics and ballistics, technology, current events, cultural philosophies and psychology, and very large emphasis on safety from varying perspectives.

Note 1: Students who successfully complete this classroom course may elect, at their own cost, to take a practical firearms instruction course that has been approved by the GSIS Program Chair to apply for 1 credit hour of advanced standing by presenting a firearms course completion certificate.

Note 2: GSIS students may only use this course as an open elective.

SIS 328

Intelligence Analysis, Writing, and Briefing (3,0)
3 Credits

This course is designed to strengthen the student's analytical and communications skills, preparatory to a career in intelligence and corporate security arenas. The course will enable the student to understand predictive analysis and modeling and will provide analytical tools with which to deal with changing events. Included among the latter are computer-based

Undergraduate Course Descriptions

analytical programs currently used intensively in the intelligence community, as well as familiarity with intelligence and warning matrices and link analysis. The student also is trained to write intelligence briefs and required to practice this style and format under short deadlines. The student also will write a longer intelligence assessment and then brief that to the class.

Prerequisite: COM 223 or permission of the instructor.

SIS 330

World Political Thought (3,0)

3 Credits

This course will survey world political thought from the classical period to the present. The prevailing political philosophy in each major epoch of world history will be presented, with a particular focus on a key thinker. These will include Sun Tzu in classical China, Katuliya in ancient India, Plato in classical Greece, Cicero in the Roman Empire, Saint Augustine and St. Thomas Aquinas as Christian thinkers, Alfarabi in Islam, and Machiavelli in the Renaissance. Much of the course will deal with the Western political tradition: Thomas Hobbes, Hugo Grotius, Benedict Spinoza, John Locke, Montesquieu, the American Federalists, Edmund Burke, Hegel, Alexis de Tocqueville, Marx and Engels, John Dewey, and Leo Strauss. Two modern non-Western thinkers, Mohandas K. Gandhi and Mao Zedong, also will be examined. The student should become familiar with the major themes in political thought: realism, idealism, constitutional republicanism and the rule of law, liberal democracy, fascism, socialism, Marxism, and the "Third Way."

Prerequisite: SS 110 or LCH 400.

SIS 335

Counterintelligence (3,0)

3 Credits

Counterintelligence is the study of how to protect one's intelligence community from external penetration, including one's sources and methods, personnel, and assets, how to discover and evaluate successful outside penetrations, and how to penetrate hostile intelligence services. The course will cover the history of counterintelligence operations of the U.S. and provide case studies of successful operations against the U.S. and vice versa. It will look at motivations for betrayal, investigatory approaches, the legal domain, and the range of counterintelligence targets. Included in the latter will be an examination of how hostile powers increasingly attempt to acquire high technology, software, and economic information.

Prerequisite: SIS 315 or permission of the instructor.

SIS 340

Security Investigations and Interview (3,0)

3 Credits

This course will focus on understanding and applying the elicitation approaches and techniques employed during security and counterintelligence investigations. The student will learn how to evaluate and investigate allegations of wrong doing objectively and systematically. The student will become familiar with the various psychological approaches and behavior observation techniques used during the interview process. The students will learn to observe and read body language, behavior and other cues to help evaluate a person's truthfulness during an interview. The students will learn to plan and scope an investigation based on the legal and or regulatory elements of proof. The students will plan and conduct investigations of fictitious security violations and criminal acts including participating in mock interviews, interrogations, evidence collection and report writing. They will also learn the Constitutional and legal constraints and requirements involved in both general Criminal and counterintelligence investigations.

SIS 400

International Security and Globalization (3,0)

3 Credits

An analysis of 21st-century international security issues related to scientific and technological change. Topics include the nature of security-economic, sociocultural, and military; political leadership/follower-ship, decision making, and conflict resolution; political violence, especially terrorism and ethnic conflict; intelligence and counterintelligence analysis and operations; weapons proliferation; information warfare; the politics of international organized crime; bureaucratic evil; internal dislocation and immigration; and the politics of public health. A special focus throughout the course will be on the aviation and aerospace industries: policies and operations, safety, and security. This course will emphasize science, technology, and globalization as the environment in which concepts of international security evolve and as impacted by international security phenomena.

Prerequisites: College-level psychology, college-level history and SS 327 or permission of instructor.

SIS 405

Environment and Security (3,0)

3 Credits

This course is designed to introduce students to the contingencies and conflicts posed by the intersection of security and environmental issues, including dis-

Undergraduate Course Descriptions

putes over ground water rights, international rivers, scarce energy resources, manipulation of crop gene pools, genetically modified crops, global migration, international treaties and conventions on environmental issues, and global climate change. Students will be introduced to environmental issues that pose significant security risks to a nation, affect a nation's economic wellbeing and/or military preparedness, and pose challenges to those laws governing the protection of the natural environment. Ethical issues will also be addressed, particularly as these relate to policy making on issues that span both environmental and security concerns.

Prerequisite: SIS 315 or permission of the instructor.

SIS 410

Corporate Security Management and Operations (3,0)

3 Credits

During this course students will learn the basic security concepts and methods employed in protecting the personnel, assets, and information of domestic and international corporations. Students will become familiar with the best security practices and their application in private business. The students will review the types of corporate security organizations and the role of the key corporate security manager in a corporation's hierarchy. Another area of discussion is the expenditure of corporate resources for security and related budgetary planning. Students will gain a familiarity with physical security equipment including its application, effectiveness, and cost. Students will learn about access control and identification, security system design and application, close circuit television and surveillance, security and theft investigations, and executive protection. Protective measures against terrorism, natural disaster, and workplace violence will also be covered. During the course, students will be required to develop a security organization and budget for a fictitious corporation including designing and budgeting for a new facility to demonstrate their understanding of the course material.

Prerequisite: BA 201 or equivalent with instructor approval.

SIS 412

Government Security Operations and Management (3,0)

3 Credits

This course will focus on understanding the federal intelligence and security organizations, their organizational structure, responsibilities and functions. The pivot role the federal security officer plays in these organizations in the protection of personnel, assets and information will be stressed throughout the course. The student will learn the critical importance

of personnel screening and information protection in preventing espionage and other crimes. The student will draft security plans and policies in these critical areas. The student will learn how to apply personnel policies involving hiring, evaluation and termination of employees. They will recognize "red flags" in the hiring process and the possibility of workplace violence resulting from terminations. Students will develop and practice briefing employees and senior executives on security awareness issues including counterintelligence threats. Throughout the course, individual students and student teams will be challenged to make decisions under time pressures without complete information impacting organizational security and operations..

SIS 415

GSIS Senior Capstone Course(3,0)

3 Credits

This course is one of the three options that students may choose in order to complete their senior project requirement in the GSIS program. It is only available to students with junior or senior standing. It provides an intensive, semester-long simulation for teams of students assuming the roles of political, military, economic, or scientific and technological intelligence case officers. Through the semester-long immersion with an intelligence tasking, students will be expected to demonstrate sophistication with case officer-agent relationships; staffing and coordination involving the various combinations in one's intelligence station, among stations, and between one's station and regional and central headquarters; intelligence briefings, executive summaries, and estimates; credibility and risk analysis, both of sources and of recommendations concerning specific covert action, espionage, and counterintelligence operations; operations/physical/communications/personnel securities; and the intelligence opportunities, limitations, and threats presented by today's era of globalization.

Prerequisite: SIS 210, SIS 315 and senior standing.

SIS 416

Introduction to Middle Eastern Comparative Law (3,0)

3 Credits

The most exciting development in American legal thinking in the last 50 years is the quest to understand and improve law by studying law in light of other disciplines and traditions. The Jewish legal and Middle Eastern tradition is studied in light of the disciplines of the humanities and in light of secular and religious legal traditions, such as American Constitutional law, Islamic law, and Canon law. The interdisciplinary and comparative study of Jewish and Middle Eastern law contributes to the under-

Undergraduate Course Descriptions

standing and development of Western principles of law and enhances the academic study of other fields of Judaism and Islam and, in turn, enriches the study of Constitutional law, other traditions, and the disciplines of the humanities.

Prerequisites: SIS 200, SS 320.

SIS 418

Islam: Origins, History, and Role in the Modern World (3,0)

3 Credits

The course is a detailed introduction to Islam: its origins, history, and contemporary relevance in the worlds of thought, ideas, political mobilization, and military affairs. The course examines the life and teaching of the Prophet Muhammad, the Qur'an (Koran), the early history and territorial expansion of the Umayyads, the glories of the Abbasids, the major sectarian splits (Sunni, Shi'a, Ismailiyya), the Sharia and the Orthodox Tradition, Sufism, the Sultanates, the impact of Western colonialism, the modernizers and the orthodox reaction, the Iranian Revolution, and the rise of "political Islam" in the Sunni world, including the emergence of Islamism, neo-Wahabbism (Al-Qa'ida), and jihadi movements in Afghanistan, the Balkans, the Caucasus, the Philippines, and Kashmir.

Prerequisite: SS 110 or LCH 400.

SIS 420

Aviation Security and Technology (3,0)

3 Credits

This course will concentrate on the disciplines of security and intelligence as applied to aviation. Students will learn to apply the four core security disciplines: communications security, operations security, physical security, and personnel security. Of prime concern in this course is airport/aviation readiness to prevent and respond to the following threats: hijackings, CBRN attacks, bombings, missiles, and shootings as perpetrated by terrorists and/or various nonpolitical hijackers. Other topics include airport familiarization and safety; post 9/11 responses by the public, industry, and government; airport hardening; security screening; first responder roles and needs; the off-airport interface and multimodal infrastructure; cargo and general aviation issues; international security; biometrics and other emerging technologies; and airline security issues.

SIS 421

History and Philosophy of Law/Jurisprudence (3,0)

3 Credits

This course will examine the practice and theory of specified subject areas of law. This course is concerned with the development and critique of theories that have impacted the development of law as well as practices in specific subject areas. Hence, it is a course about general approaches to law and legal thinking. The course will examine a number of contemporary approaches actively pursued in U.S. law schools, looking at work in, feminist legal theory, legal pragmatism, critical race theory, law and literature, and some "centrist" legal theory. Other approaches may be included based on student interest. Students will be responsible for an in-class presentation on subjects to be arranged, as well as a final paper. Preparation and active participation will be expected.

Prerequisites: SIS 200, SS 320.

SIS 422

Homeland Security and Technology (3,0)

3 Credits

This course will examine the whole range of issues relevant to the defense and security of the U.S. homeland. These will include transportation security, immigration and border security, cargo security, the presence of radical elements in the U.S., the statutory and regulatory structure, and the institutions and agencies responsible for homeland security at the federal, state, and local levels. Legal and ethical issues also will be examined, as these relate to national security and privacy.

Prerequisite: SIS 315 or permission of the instructor.

SIS 425

Information Protection and Computer Security (3,0)

3 Credits

This course provides students with a familiarity with information protection programs in both the government and private sectors. The course also provides students with an overview of computer security including physical security practices and hardware and software protection. Students will learn the importance of applying proper security protection measures to classified and sensitive information to prevent its intentional or unintentional unauthorized disclosure. Students will review the U.S. government's regulatory scheme for protection of its classified information including several case studies of unlawful information disclosure. Similarly students will review information protection practices in private organizations and their importance. Students will examine

Undergraduate Course Descriptions

and discuss the various aspects of computer security including physical protection of hardware, software protective programs, and employee security awareness programs. The students will also learn how to detect and investigate computer crimes. Finally, students will draft an information security program for a fictitious government or private organization to demonstrate their full understanding of the course material.

Prerequisite: IT 109 or equivalent with instructor approval.

SIS 426

Physical Security and Facility Design (3,0)

3 Credits

This course will focus on understanding and applying physical security concepts and principles to protect people, information, and facilities against criminal activities and terrorist attacks. The students will learn the basic security concepts underlying such protective activities, the types of physical security measures and equipment that may be employed, and their effectiveness in terms of threat mitigation and cost. The students will become familiar with integrating security into the facility planning process, blueprint reading, and equipment selection based on threat assessment and facility use. Student teams will review building designs for security effectiveness and conduct security audits of existing buildings. The teams will also be responsible for physical security measures and equipment to be chosen in designing for retrofitting a major government or private facility. This project will include evaluating the security needs based on the facility's proposed operations, personnel staffing, and assets, including the development of a capital budget.

SIS 430

Emergency Management and Contingency Planning (3,0)

3 Credits

This course provides students with a comprehensive overview of emergency management practices in both government and private organizations in the U.S. The students will become familiar with the basic concepts, principles, and terms used in the emergency management discipline that includes preparedness, mitigation, response and recovery operations. Students will focus on the planning and leadership roles during natural and man-made disasters and interaction between government and private organizations during such incidents. During the course, the students will discuss the individual roles of the federal, state, and local governments and the private sector in such emergencies. The students will become familiar with the National Response Framework and the National

Incident Management System and their application during national disasters. Students will also examine the essentials of business contingency planning in the private sector for disasters. Finally, students will plan and participate in a mock disaster drill to demonstrate their full understanding of the course material.

SIS 470

Senior Cooperative Internship (3,0)

3 Credits

This course is one of three options that students may choose in order to complete their senior project requirement in the GSIS Program. This course is only available to students with junior or senior standing and with the prior approval of either the Department or Program Chair. This course is designed to permit the student to use the security and intelligence knowledge gained throughout the program in a related professional environment while sharpening their research and analytical skills. The sponsoring organization will independently evaluate the student's work skills and on-the-job performance. The student is also required to demonstrate their research and analytical skills by identifying a problem or issue related to the sponsoring organization's responsibilities or functions, analyzing the various solutions, determining the most effective solution and detailing the results of their analysis in a major research paper. The student's faculty sponsor will review and evaluate the student's research project and the results of both evaluations will be combined to arrive at a final course grade.

Prerequisite: Junior or senior standing.

SIS 475

Senior Thesis (3,0)

3 Credits

This course is one of three options that students may choose in order to complete the senior project requirement. This course is for students who have at least a 3.40 GPA and who plan to attend graduate or law school. It is a classic thesis research course on a topic that requires an intensive review of the relevant literature, extensive research, and superior organization and writing. The senior thesis should provide a degree of originality in research, research method, and/or analysis. Each student will be supervised by a faculty committee and will be required to defend his or her thesis before a faculty panel and the interested public. Students wishing to take this course must apply to the Chair of the Department of Global Security and Intelligence Studies within the last third of the first semester of their senior year.

Prerequisite: Senior standing.

Undergraduate Course Descriptions

SIS 199 - 499

Special Topics in Global Security and Intelligence Studies

1-3 Credits

Individual independent or directed studies of selected topics in Global Security and Intelligence Studies related topics.

Prerequisites: Consent of instructor and approval of department or program chair. May be repeated with a change of subject.

Social Sciences

SS 110

World History (3,0)

3 Credits

This course is primarily as a survey of the development and evolution of World Civilization from 1500 to the present. Emphasis is placed on the effect of Western influence on the world.

SS 120

U.S. History (3,0)

3 Credits

This course is a survey of the United States history from the conclusion of the Civil War in 1865 to the present. Reconstruction, the age of big business, the United States as a world power, The Great Depression, World War II, The Cold War, Civil Rights, Vietnam and its aftermath

SS 130

History of Aviation in America (3,0)

3 Credits

A survey of the history of America in the 20th century, emphasizing the explosive growth of aviation as a major influence on the economic, military, and societal development of the U.S.

SS 204

Introduction to Geography (3,0)

3 Credits

A survey course designed to acquaint the student with types of maps, map reading and use, as well as to show relationships between geography and economics, culture, and geopolitics. Humans and their use of their environment are stressed, along with the usual emphasis on places, names, and locations. Ancillary topics will include climate, demography, and transportation.

SS 210

Introduction to Sociology (3,0)

3 Credits

Integrated survey of the fundamental concepts of culture, forms of collective behavior, community and social organization, social interaction, and social change. The social effects of aviation and the impact of science on the social order living in an air age will also be investigated.

SS 260

Cultural Anthropology (3,0)

3 Credits

In a time of globalization, geopolitical movement, and increased cultural contact, an understanding of basic cultural constructs is necessary for global political, economic, military, and human behavior analysis. This course examines the nature of culture, with particular emphasis on theoretical and methodological approaches to studying culture. Cultural institutions, such as family, clan, tribe, and other kinship networks, customary political and religious organizations, and village communities will be studied. Social behaviors, shaped by various cultures, as exhibited in groups, as well as internalized social behaviors at the individual level, will be examined.

SS 290

History of Modern Europe (3,0)

3 Credits

This course is a survey of the major social, economic, political, and cultural forces that shaped contemporary Europe. It traces the 19th century surge of optimism that the problems of humankind could be solved by ideologies such as liberalism, nationalism, and socialism through to the death of that optimism in the bloody conflicts of the 20th century. The class will also examine the 21st century directions of Europe and European unity.

SS 302

Evolution of Scientific Thought (3,0)

3 Credits

Traces the development of science from the earliest times through the modern period, with particular emphasis given to our changing concepts of nature and of science itself. (Also offered as PS 302. Students receive either Social Sciences elective credit or Physical Sciences elective credit, but not both.)

Prerequisites: Any course from the HU 140 series and either PS 101 or PS 102 or PS 103 or PS 150 and PS 215.

Undergraduate Course Descriptions

SS 311

U.S. Military History 1775-1900 (3,0)

3 Credits

Military history with an emphasis on military policy, organization and technology as they relate to political, social and economic developments from 1775 to the present.

Prerequisite: SS 120

SS 312

Personality and Profiling (3,0)

3 Credits

This course provides a rigorous and comprehensive foundation for explaining, understanding, predicting, and influencing people. This foundation will be applied to stopping people from violating trust—namely, committing espionage—and to identifying and controlling them as quickly as possible after they have violated trust. The course will largely focus on personality theory and research based on scientific methodologies. The course also will explore other approaches to human knowledge and meaning including the philosophy of epistemology, literary criticism, and the interpretation of cultural products such as film, music, dance, and painting. By course's end, students will have profiled a U.S. citizen convicted of spying against his country.

SS 320

American National Government (3,0)

3 Credits

This course introduces the basic issues of democracy in the U.S., constitutional principles and the executive, legislative and judicial branches of government.

Prerequisite: SS 110.

SS 321

U.S. Military History 1900-Present (3,0)

3 Credits

Military history with emphasis on military policy, organization, and technology as they relate to U.S. political, social, and economic developments from 1900 to the present.

Prerequisite: SS 120

SS 326

Russian-U.S. Relations (3,0)

3 Credits

This course explores the development of Russian-United States economic and political relations, emphasizing the era of the 20th century.

Prerequisite: SS 110 and SS 120.

SS 327

International Relations (3,0)

3 Credits

This course will examine historical and contemporary themes in international relations that set the stage for analyzing the current and future international system. Toward this, the curriculum is designed to introduce the student to the theory and practice of international relations with the objective of enabling a greater understanding of the global context that shapes issues and outcomes in world affairs. Extending beyond simple description, the student will develop an analytic and anticipatory capacity in which to explain foreign policy and international politics.

Prerequisite: SS 110.

SS 333

U.S.-Asian Relations (3,0)

3 Credits

This course explores the development of U.S.-Asian political, cultural, and economic relations, from their beginnings in the 19th century to the present. The course will examine America's domestic motivations for expanding into the Pacific, the various impacts that the U.S. has had on Asian nations, and Asia's collaboration with and resistance to the American presence.

Prerequisite: SS 110 and SS 120.

SS 336

The Modern Middle East in World Affairs (3,0)

3 Credits

A historical examination of the land, societies, cultures, economics, and politics of the Middle East from World War I to the present in relation to recent and current world events and policies.

Prerequisite: College-level history or permission from professor.

SS 340

U.S. Foreign Policy (3,0)

3 Credits

This course is a survey of the evolution of present American Foreign Policy, stressing the factors which affect and shape this policy. Attention is given to present governmental offices, agencies, and departments and the role each plays in policy formulation and implementation. Emphasis is on the period since World War II.

Prerequisite: SS 120.

Undergraduate Course Descriptions

SS 360

Environmental Law (3,0)

3 Credits

Provides a general introduction to the field of planning, and examines the procedural approaches shared by practitioners working in all areas of contemporary planning. Introduces legal concepts and doctrines relevant to pollution control, assessment of environmental impacts, and land use.

Prerequisite: AES 142 or permission of instructor.

SS 363

Inter-American Relations (3,0)

3 Credits

This course explores the development of U.S. political and economic relations with Latin America from their beginnings in the 19th century to the present.

Prerequisite: SS 327 or SS 340.

SS 410

International Human Rights (3,0)

3 Credits

This course will address the issues of human rights at the global level from a historical and sociological perspective. It will provide an introduction to basic human rights philosophy, principles, instruments, and institutions. The course will cover the conceptual foundations of the idea of rights, the international human rights movement, and various human rights issues, including the Holocaust and other cases of mass genocide. As with any social science course, students are expected to engage in readings and write critical essays.

Prerequisite: SIS 200.

SS 299 - 499

Special Topics in the Social Sciences

1-6 Credits

Individual independent or directed study of selected topics in the areas of history, sociology, psychology, and human culture in general.

Prerequisites: Consent of instructor and approval of the department chair.

College Success

UNIV 101

College Success (2,0)

1 Credit

A course in which students assess and develop the personal, interpersonal, intellectual, and social skills necessary to succeed in college. Time management, study skills, goal clarification, career information, and college resources are included. This course is available to freshmen only.

UNIV 400

Career Development (1,0)

1 Credit

Introduces students to various elements involved in obtaining a position in their chosen fields. Topics include self-assessment, research and selection of a career path, sources of jobs, job-search techniques, resumes and letters of application, references, interviewing skills, business etiquette, and professional image. Each student will develop a career portfolio including personal and professional information related to career goals.

Applied Meteorology

WX 201

Survey of Meteorology (3,0)

3 Credits

This is a survey course in meteorology that includes applications to flight. Included is a systematic development of the following topics: the composition and general structure of the atmosphere, energy and energy transfer, seasonal and daily controls on temperature, pressure, wind, local and regional circulations, atmospheric stability, vertical motion, turbulence, moisture, fog, clouds, precipitation, icing, the general circulation pattern, climate, jet streams, air masses, fronts, mid-latitude cyclones, tropical cyclones, thunderstorms, and weather observations and charts.

Prerequisite: MA 006 or equivalent.

WX 202

Current Weather Discussion (1,0)

1 Credit

This course takes advantage of real-time weather data to introduce, review, and apply various topics that are developed in other courses in our program. Two, three, and four-dimensional analysis techniques are

Undergraduate Course Descriptions

used to examine the evolution of previous, current, and forecast weather conditions. Subject matter will vary from semester to semester. The course is repeatable for a total of three credits.

Prerequisite: WX 201 or WX 252.

WX 210

Introduction to Geographic Information Systems (3,0)

3 Credits

Geographic Information Systems (GIS) encompass all aspects of spatial data analysis from data acquisition and manipulation through problem solving to the graphic presentation of results. This course surveys GIS theory and applications as students learn to store, retrieve, manipulate, analyze, and display spatial data according to a variety of user-defined specifications. Lectures will emphasize fundamental principles of GIS while computer-based exercises will emphasize training.

WX 220

Data Analysis and Visualization (3,0)

3 Credits

This course builds on CS 125 to include fundamentals of programming in IDL (Interactive Data Language), addressing a wide range of meteorological problem-solving, data analysis, and visualization techniques. Students will use a problem-solving approach for understanding IDL structures, procedures, and functions, with emphasis on scientific techniques and applications. The students will also receive a brief introduction to Fortran and C++.

Prerequisite: CS 125.

WX 252

Introduction to Meteorology (3,0)

3 Credits

A survey course in meteorology for meteorology majors, covering the following topics: atmospheric composition and structure, energy exchange, thermal patterns, atmospheric moisture, clouds, stability, precipitation processes, wind and pressure, global circulation, upper-level winds and jet streams, local winds, air masses, fronts, mid-latitude cyclones, weather forecasting, thunderstorms, and tropical meteorology. Students will also be introduced to weather observations, surface and upper-air maps, the Skew-T log-P chart, and satellite and radar imagery.

WX 261

Applied Climatology (3,0)

3 Credits

An in-depth survey of the varied climates of This course is an in-depth survey of the varied climates of the world and of the impact of climate on aviation. Emphasis is placed on understanding energy exchange processes that control climate and in describing in detail how and why temperature, precipitation and wind vary during the year and in relation to geography. Included is a treatment of climate variability, including how and why climate is thought to have changed in the past, and how it might change in the future, and of the tools used to understand this variability.

Prerequisite: WX 201 or WX 252.

WX 270

Weather Information Systems (3,0)

3 Credits

This course provides an introduction to the various weather sensing equipment and the systems that deliver weather information to various users. The development of various sensing devices will be explored and current instrumentation technology explained. The course will provide an overview of how various instruments make measurements, the physical principals involved in the measurements, the limitations of the measurements, and how these data are used in weather operations and forecasts. The use of these measurements will be illustrated in class weather briefings, labs, projects, and homework assignments. Students will be required to design, build, calibrate and take data with a weather instrument..

Prerequisite: WX 201 or WX 252.

WX 301

Aviation Weather (3,0)

3 Credits

An expansion of WX 201, including the following theoretical concepts: hydrostatic instability, baroclinic instability, thermal wind, and kinematic fields. These will be integrated into real-time weather analysis of synoptic patterns involving mid-latitude cyclones, advection, frontal systems, and jet streams. Practical application will be achieved through presentation of current and historical weather data emphasizing common hazards to aviation such as thunderstorms, strong winds, fog, icing, and turbulence. An introduction to weather forecasting concepts will be presented.

Prerequisite: WX 201 or WX 252.

Undergraduate Course Descriptions

WX 353

Thermodynamics of the Atmosphere (3,0)

3 Credits

A course for those requiring an in-depth understanding of the physical processes governing the atmosphere. Includes discussion and quantitative treatment of meteorological conventions, atmospheric state and structure, radiation, heat/energy transfer, boundary layer structure and fluxes, moisture, stability, cloud formation, and precipitation.

Prerequisites: WX 201 or WX 252.

WX 354

Dynamics of the Atmosphere (3,0)

3 Credits

A course for those requiring an in-depth understanding of the dynamic processes governing the atmosphere. Includes discussion and quantitative treatment of atmospheric forces, the equations of motion, local and global winds, air masses and fronts, middle-latitude cyclones, quasi-geostrophic theory, thunderstorms, and hurricanes.

Prerequisites: WX 201 or WX 252, and WX 353.

WX 355

Weather Analysis (5,0)

5 Credits

This course presents conceptual models of synoptic weather features and applies them to analysis of meteorological data fields. Meteorological codes for surface and upper air data are surveyed and the basic conventions of surface and upper air charts are introduced. Labs cover the standard tools of weather analysis and give students practice constructing and using isopleths of pressure, temperature, dew point, and geopotential height. The horizontal and vertical structure of fronts is examined through pattern recognition of standard meteorological variables, atmospheric thickness, and cross-section analyses. Methods for analyzing wind fields, such as streamlines, air parcel trajectories, and jet stream identification, are presented. Students practice conceptually integrating satellite and radar data to verify and refine their analyses in accordance with dynamical principles. This course covers both manual (hand-drawn) weather map techniques and computer meteorological analysis software packages.

Prerequisite: WX 354.

WX 363

Thunderstorms (3,0)

3 Credits

This course provides tools for analyzing and forecasting thunderstorms and their associated hazards. Key characteristics of the thunderstorm and its environment are explored using both case studies and real-time weather data. Students examine atmospheric soundings to determine the likelihood of storm development and the amount of energy available for thunderstorms. Vertical wind shear is analyzed for clues about storm organization and severity. Other information, such as weather charts, computer models, satellite imagery, and Doppler radar imagery, is used to observe the characteristics of thunderstorms and the weather patterns that favor them. Students gain a basic scientific understanding of thunderstorm behavior as well as practical experience observing and predicting them.

Prerequisite: WX 252 or WX 301 or WX 353.

WX 364

Weather for Aircrews (3,0)

3 Credits

Making use of the Weather Center and the Internet, students collect and study weather data from around the world. Emphasis is placed on decoding information contained in the remarks section of weather observations and on the differences between North American weather charts and those produced in other parts of the world. Students investigate the flying conditions and aviation environment over the seven continents. The proper operation of airborne weather radar is studied. Students identify weather hazards by using ground-based weather radar and satellite imagery.

Prerequisite: WX 252 or WX 301.

WX 365

Satellite and Radar Weather Interpretation (3,0)

3 Credits

A practical introduction to meteorological interpretation of satellite and weather radar imagery. This course surveys the basic physics of electromagnetic (EM) radiation and shows how characteristics of the EM spectrum are exploited in passive (satellite) and active (radar) remote sensing to create digital images of geophysical information. The theory of radar signal propagation and precipitation estimation is applied to the meteorological interpretation of radar imagery and supplemented with practical analysis of various radar product types. Weather satellite image types, including visible, conventional infrared, and water

Undergraduate Course Descriptions

vapor channels and their meteorological applications, are examined. Real-time satellite identification of meteorological phenomena will be emphasized, including mountain waves, midlatitude cyclones, fronts, jet streams, troughs, ridges, vorticity, cloud types, fog, precipitation, ordinary and severe thunderstorms, tropical waves, and hurricanes. Surface and upper-air weather maps will be used to enhance the students' understanding of satellite image signatures.

Prerequisite: WX 252 or WX 301 or WX 353.

WX 390

Atmospheric Physics (3,0)

3 Credits

This is a technical course that explores physical applications in the field of meteorology. Course topics include elements of earth-sun geometry, gravitation, kinetic theory, the physical structure of the atmosphere, waves, radiative transfer, atmospheric chemistry, remote sensing and atmospheric electricity.

Prerequisites: MA 243, PS 160, WX 220 and WX 353.

WX 420

Advanced Atmospheric Thermodynamics (3,0)

3 Credits

This course provides an application of physics and calculus to the study of atmospheric thermodynamics. The course covers such topics as hydrostatics, conservation of energy, the Ideal Gas Law, temperature relationship to kinetic energy, specific heats, enthalpy, and entropy. Additionally, water and its transformations, the thermodynamics of dry, moist, and saturated air, and thermodynamic diagrams are covered.

Prerequisites: PS 160 or PS 208, WX 353, MA 242.

WX 427

Forecasting Techniques (3,0)

3 Credits

This course provides an introduction to the world of weather prognostication. Topics include the traditional forecast methods based on weather analysis techniques, up through the latest computer-generated weather prediction models. The student is exposed to techniques for forecasting tomorrow's weather as well as seasonal weather trends.

Prerequisites: WX 353, WX 354, WX 355, WX 363, and WX 365.

WX 457

Weather Operations Seminar (3,0)

3 Credits

This course synthesizes previous knowledge, examining methodologies employed by decision-makers in weather forecasting, military operations, flight planning operations and hydrology. Preparation for graduate school or a technical career will be provided by teaming each student with a meteorology faculty mentor for a basic or applied research project culminating in the presentation of a research paper in the format of a professional journal submission. Effective written and oral communication skills will be emphasized throughout.

Prerequisite: WX 355.

WX 490

Advanced Dynamic Meteorology I (3,0)

3 Credits

This first course in atmospheric dynamics uses physics and calculus. The instruction includes such topics as equation of motion on a rotating Earth, balanced flow, kinematics, circulation theorem, conservation of absolute angular momentum, mass continuity, vorticity equation, and wind-pressure imbalance.

Prerequisites: MA 243, WX 354, and WX 420.

WX 491

Advanced Dynamic Meteorology II (3,0)

3 Credits

This is the second course in atmospheric dynamics, which uses vectors. It includes such topics as Rossby waves, quasi-geostrophic theory, and synoptic-scale instability theory.

Prerequisite: WX 490.

WX 299 - 499

Special Topics in Meteorology

1-6 Credits

Individual independent or directed studies of selected topics in applied meteorology.

Prerequisites: Consent of the instructor and approval of the program coordinator.

GRADUATE COURSE DESCRIPTIONS

Embry-Riddle Aeronautical University graduate course offerings at the Prescott Campus are listed in alphabetical order, according to the following course designations:

MSA Master of Aeronautical Science

MSF Master of Science in Safety Science

The following courses are not necessarily offered every term, nor are they necessarily offered at all campus locations.

MSA - Aeronautical Science

MSA 602

The Air Transportation System

3 Credits

A study of air transportation as part of a global, multimodal transportation system. The course reviews the evolution of the technological, social, environmental, and political aspects of this system since its inception at the beginning of the 20th century. The long-term and short-term effects of deregulation, energy shortages, governmental restraints, and national and international issues are examined. Passenger and cargo transportation as well as military and private aircraft modes are studied in relation to the ever-changing transportation requirements.

Prerequisites: Demonstrated knowledge of aviation rules and regulations and economics.

MSA 613

Airport Operations Safety

3 Credits

A study of airport operations safety as applied to day-to-day operations. A review and analysis of all federal regulations applicable to operations and safety are conducted.

Prerequisites: Demonstrated knowledge of performance of airports and airline operations management or related field.

MSF - Safety Science

MSF 530

Aircraft Accident Investigation

3 Credits

An examination of investigation as it pertains to aircraft accidents from the perspectives of the administrative, regulatory, and practical field investigation aspects. Emphasis will be on the evidence-gathering, preservation, and processing phases of accident investigation. An overview of organizations that conduct and participate in investigations, and an analysis of their roles in those investigations will be completed. Use of a laboratory will provide practical field experience. Research into investigative concepts and techniques will be an integral part of the course.

MSF 580

Industrial Hygiene and Environmental Protection

3 Credits

A study of the role and responsibilities of an industrial hygienist employed in technical industries. The course reviews the application of methods for the identification, evaluation, and control of industrial hygiene and environmental hazards encountered in the aviation and other workplaces. Specific hazards to be addressed include noise, vibration, ionizing and nonionizing radiation, thermal conditions, pressure, chemicals, airborne contaminants, and biological substances. Engineering and nonengineering controls as well as regulatory requirements will also be covered.

MSF 600

Quantitative Methods

3 Credits

This course is a survey of quantitative methods pertinent for safety practitioners. Topics include descriptive statistics, probability distributions, the idea of

Graduate Course Descriptions

statistical significance, the distinction between parametric and nonparametric statistics, confidence intervals and hypothesis testing, correlation, regression, analysis of variance (ANOVA), and epidemiology.

MSF 601

Ergonomics

3 Credits

This course studies the most common source of musculoskeletal injuries in the American workplace. These injuries, commonly labeled as overexertion or repetitive stress, are found in various forms in all workplaces. The course begins with a study of work physiology and its implications for workplace design and workplace safety. It covers biomechanics and its implications for workplace design, low back pain, and other overexertion injuries. It covers the various cumulative trauma disorders, including the importance of risk factors such as force, frequency, and posture. Setting up and managing an ergonomics program are discussed.

MSF 602

Human Factors

3 Credits

This course studies the role of human factors in workplace and work task design with emphasis on complex technical industries including aviation/aerospace. This study of human factors includes traditional material such as anthropometry, control/display design, visual and auditory acuity and their importance in work design, circadian rhythms and their implications for work design and shift work, psychomotor skills, and learning and memory. It also includes the human role as it relates to unsafe acts, attitudes, errors, and deliberate actions. Finally, the course studies the interface between human factors in workplace design and human error.

Prerequisites: MSF 600 and demonstrated knowledge of behavioral science, college-level mathematics, including introductory statistics, and basic computer operations.

MSF 603

Occupational Safety

3 Credits

This course provides a broad overview of occupational safety. It begins with an exploration of the history of the subject, moves through the OSH Act, workers' compensation, safety program development and management, and finally addresses a series of specific hazards. These hazards include machine guarding, material handling equipment, fall protec-

tion, fire protection, building design, and lighting. The application of safety and health management principles to the management of complex technical industries including aviation/aerospace are covered using scenario evaluations to determine OSHA compliance, accident/injury data evaluation and analysis, and OSHA log completion.

MSF 605

Industrial Hygiene Measurement

3 Credits

This course provides students with the knowledge and skills necessary to conduct basic industrial hygiene surveys. Hands-on laboratory experience is provided for the students, starting with equipment calibration and ending with completing a field-sampling project. Particulate sampling for both total and respirable, gravimetric analysis, gas/vapor sampling with tubes and impingers, dosimeters, use of direct reading instruments and detector tubes, are all covered. The fundamentals of sample analysis are presented. Case studies are presented to emphasize the strategies used to select sampling locations, times, and individuals.

Prerequisite: MSF 580.

MSF 606

Control Methods in Occupational Safety and Health

3 Credits

This course studies the methods commonly used by OSH professionals to control aviation and industrial workplace exposures to health and safety hazards. The most commonly used control for industrial health hazards is industrial ventilation, so this control method is studied in detail, with students learning to complete basic ventilation system designs and to evaluate moderately complex designs. Students may also learn to use ventilation system testing equipment to verify that a system is working as designed and to troubleshoot a system that is not working properly. The proper use of and the potential failure modes associated with personal protective equipment are evaluated. In addition, measurement and control methods for noise and vibration are examined through a series of lectures and class projects.

MSF 607

Epidemiology

3 Credits

Epidemiology is the basic science underlying all public health programs, whether implemented privately in industry or publicly by government organizations.

Graduate Course Descriptions

This course will deal with the distribution and causes of diseases (including all forms of illness, injury, and accidents) in specified populations. This will be applied to the control of health problems through the understanding of the causes of those problems.

Prerequisite: MSF 600.

MSF 609

System Safety

3 Credits

An in-depth review of system safety management principles and system safety engineering techniques are combined in this course to enable students to fully comprehend their vital roles in preventing accidents. This course emphasizes the specialized integration of system safety analytical techniques and risk management into all phases of a system's life-cycle using a system safety program that is tailored to an organization's mission. System safety's relationship with other disciplines such as reliability, maintainability, human factors, and product liability will be examined in the context of government, military, and general industry.

Prerequisite: MSF 600 and demonstrated knowledge of college-level mathematics, including introductory statistics.

MSF 610

Industrial Security

3 Credits

This course will intensively focus on the various aspects of business intelligence and industrial security as they apply to complex and technical industries. Of prime concern are risks, threats, and countermeasures. Topics include intelligence theory and intelligence operations; foreign and domestic organized crime; industrial espionage; riots and disasters; terrorism; sabotage; hijacking; internal security; cybercrime; legal and ethical issues; de facto and regulatory roles of local, regional, and national governments, international agencies, and nongovernmental organizations; social and cultural factors; strategic planning and investment vulnerabilities; and physical, operations, communications, and personnel securities.

MSF 611

Case Studies in Safety

3 Credits

This course will include a series of case studies that illustrate the role of human characteristics, behavior, performance, and preference in the failure of simple and complex systems. The case studies will be drawn

from many domains, including aviation, transportation, manufacturing, process industry, construction, agriculture, consumer products, retail, public safety, communications, medicine and rehabilitation, and sport and recreation. Students will be given the opportunity to use system analysis and design techniques to evaluate common failure modes and explore the conditions conducive to system success or failure.

Corequisites: MSF 601, MSF 602.

MSF 612

Research Methods

3 Credits

This course will emphasize research methodologies leading to the development of research problems. The course will discuss problem and sample selection, data collection, and literature review.

Prerequisite: MSF 600.

MSF 613

Aviation Safety

3 Credits

This course is a study of the aviation system as it relates to human factors and safety. The application of human factors to aviation is inextricably connected with safety. The worldwide aviation system will be covered with an emphasis on managing safety through regulatory guidelines, industry initiatives, and airline crew operations. Human factors topics will include psychological and physical implications for error management.

MSF 614

Safety Ethics

3 Credits

Safe practices in any workplace require good decisions from the managing safety professional. Many of the decisions to be made are of a technical nature based on the good practices of that profession. Others, though, have a foundation in responsible relationships with other people whether they are colleagues, supervisors, or customers. These foundations have a central element of professional ethics or morality and will have a significant impact on the safety environment.

MSF 630

Aircraft Accident Analysis

3 Credits

A critical analysis of selected aircraft accidents that involves extensive field work, teaming, a thorough

investigation, detailed examination, group-process discussions, and decision making. Each team of student investigators will produce a professional report that includes the facts, the scenario, and an analysis of all potential factors, findings, and recommendations. Identification of accident prevention measures as a product of the analysis process is stressed. Identification and analysis of available and future loss-prevention technologies will be completed.

MSF 635

Advanced Aircraft Survivability Analysis and Design

3 Credits

Entails a detailed analysis of the aircraft accident environment with particular emphasis on survivability factors. Explores factors and forces that cause injury and examines the injury-role played by impact forces and occupiable space compromises. Examines crashworthiness and delethalization technologies and concepts with a focus on the best ways to protect occupants during a crash. Selected aircraft accidents will be used as case studies. An in-depth review of basic kinematics and development of injury-related information will be completed.

Prerequisite: MSF 530.

MSF 655

Airline and Operations Safety Management

3 Credits

This course addresses the application of safety management principles and techniques to the management of airline operations and safety. Topics include hazard identification, accident/incident investigation, flight safety, cabin safety, ground safety, and emergency response programs. Regulatory requirements and airline standards as well as accident prevention strategies are included throughout the course.

Prerequisite: MSF 615.

MSF 675

Aviation Maintenance Safety

3 Credits

A study of the aviation maintenance safety practices, procedures, and policies in use throughout the aviation industry. Includes the role of maintenance safety in relation to the overall safety management program in the organization. Case studies of maintenance-related accident prevention and loss control scenarios. The influence and role of the regulatory and compliance agencies in aviation maintenance safety.

MSF 680

Integrated Safety Operations - Capstone

3 Credits

Study of management theory, integrated arrangements, common constraints, developmental level, essential guidelines, staff liaison, project improvement, effectiveness audits, and collaboration needed to ensure success of the safety function. May include a written document on a safety topic, which exposes the student to the technical aspects of writing. This course is included in the MSSS curriculum to provide the student with the opportunity to study how the various domains of the safety and health occupation are integrated into a single program.

MSF 685

Aviation Security

3 Credits

This course will intensively focus on the various aspects of business intelligence and industrial security as they apply to aviation and to aviation safety. Of prime concern are risks, threats, and countermeasures. Topics include intelligence theory and intelligence operations; foreign and domestic organized crime; industrial espionage; riots and disasters; terrorism; sabotage; hijacking; internal security; cybercrime; legal and ethical issues; de facto and regulatory roles of local, regional, and national governments, international agencies, and nongovernmental organizations; social and cultural factors; strategic planning and investment vulnerabilities; and physical, operations, communications, and personnel securities. Readings, lectures, discussions, and case studies will be supplemented by team exercises resulting in security plans addressing risks, threats, countermeasures, and evaluative mechanisms.

MSF 686

Emergency Preparedness and Preplanning

3 Credits

This course is designed to increase the student's knowledge of emergency response procedures, safety and health hazards, and enforcement issues for industry. Topics include a thorough discussion of scope, application, definitions, and other related standards; elements of an emergency response plan; training requirements; the incident command system; medical surveillance; and post-emergency response. Major elements involved in disasters and emergencies, preparedness planning, systems use, and attention to essential human services, with emphasis on community action and the development of successful, cost-effective strategies for implementing emergency and mitigation plans.

Graduate Course Descriptions

MSF 690

Graduate Research Project

3 Credits

A written document on a safety topic, which exposes the student to the technical aspects of writing. This course is included in the MSSS curriculum to provide students with the opportunity to pursue a project of special interest, but not to the level of a thesis. This is a required course for those students who choose not to write a thesis.

Prerequisites: MSF 600 and MSF 612.

MSF 696

Graduate Internship in Safety Science

1-3 Credits

Temporary professional or industrial work appointments made available to students enrolled in graduate programs at the University. An internship provides graduate students with an opportunity to extend their academic endeavors through the application of the theories and philosophies studied in the classroom to specific professional activities common to the workplace. They are academic/professional activities coordinated by the University between offering organizations and a graduate student.

MSF 699

Special Topics in Safety Science

1-3 Credits

Students may elect to perform a special, directed analysis and/or independent study in an area of particular interest. A detailed proposal of the desired project must be developed and presented to the center director or department chair for faculty review and recommendation at least three weeks prior to the end of registration for a term.

MSF 700

Thesis

3 Credits

A written document on a safety topic supervised throughout its preparation by the student's thesis committee, which demonstrates the student's mastery of the topic and is of satisfactory quality for publication.

Prerequisites: MSF 600 and MSF 612.

FACULTY AND ADMINISTRATION

Officials of the University

JOHNSON, JOHN P.

President; Professor, College of Arts and Sciences.
B.A. and M.S., Florida State University
Ph.D., Kent State University

AYERS JR., FRANCIS H.

Executive Vice President and Chief Academic Officer, Prescott Campus.

B.A., Virginia Polytechnic Institute and State University
M.S., Embry-Riddle Aeronautical University
Ed.D., Nova Southeastern University

HEIST, RICHARD H.

Executive Vice President and Chief Academic Officer, Daytona Beach Campus; Professor of Engineering.

B.A., Catawba College
Ph.D., Purdue University

MCREYNOLDS, IRENE

Vice President, Human Resources.

B.S., Bryant College
M.B.A./A., Embry-Riddle Aeronautical University

MONTPLAISIR, DANIEL E.

Vice President, Institutional Advancement.

B.A., University of Central Florida
M.S., Indiana Wesleyan University

MURRAY, MICHAEL O.

General Counsel.

J.D., Indiana University School of Law

WATRET, JOHN

Executive Vice President and Chief Academic Officer, Worldwide.

B.Sc., Heriot-Watt University
M.S. and Ph.D., Texas A&M University; P-ASEL

WEEKES, ERIC

Senior Vice President, Chief Financial Officer.

B.S., New York Institute of Technology
M.B.A., New York University

Legend

Letter designations for aviation qualifications are as follows:

A – Airplane	ME – Multi-Engine	DWE – Designated Written Examiner
C – Commercial Pilot	SE – Single-Engine	HTA – Heavier Than Air
G – Glider	A&P – Airframe and Powerplant Maintenance Technician	IGI – Instrument Ground Instructor
H – Helicopter	AGI – Advanced Ground Instructor	LTA – Lighter Than Air
I – Instrument	ATP – Airline Transport Pilot	SME – Single- and Multi-Engine
L – Land	BGI – Basic Ground Instructor	FCC – Federal Communication Commission
P – Private Pilot	CFI – Certified Flight Instructor	FE – Flight Engineer
S – Seaplane	CTO – Control Tower Operations	AC – Advanced Graduate Credit
AD – Aircraft Dispatcher	DME – Designated Mechanic Examiner	
IA – Inspection Authorization		

Faculty and Administration

Prescott Campus Academic Administration

BECK, ANGELA

Associate Professor of Humanities and Communications and Chair, Department of Humanities and Communications, College of Arts and Sciences. B.A. and M.A., San Diego State University; Ph.D., Northern Arizona University.

BLOOM, RICHARD

Associate Vice President for Academics and Professor of Psychology, Social Thought, and Global Security and Intelligence Studies. B.A. Columbia University, M.A. New School for Social Research, Ph.D., Kent State University.

CONE, MILTON L.

Professor of Electrical Engineering and Chair, Department of Electrical and Computer Engineering, College of Engineering. B.S.E.E. and M.S.E.E., University of Missouri; Ph.D., Air Force Institute of Technology.

DICKEY, ARCHIE

Dean, College of Arts & Sciences and Professor of Biology. B.A., Adams State College; M.S., Northern Arizona University; Ph.D., Arizona State University.

FIEGL, ROBERT

Assistant Professor and Chair, Department of Aeronautical Science, College of Aviation. B.S., Embry-Riddle Aeronautical University; M.A., Webster University; C-ASME/IA; AGI; CFI.

JONES, PHILIP

Professor of Global Security and Intelligence Studies and Chair of Department of Global Studies, College of Arts and Sciences. B.A., Juniata College; M.A., M.A.L.D., and Ph.D., Fletcher School of Law and Diplomacy, Tufts University.

KIDRICK, JERRY

Chair, Flight Department, College of Aviation. B.A., Central Washington University; M.S., American Military University; C-H.

MADLER, RONALD A.

*Dean, College of Engineering and Professor of Aerospace Engineering. B.S., M.S., and Ph.D., University of Colorado. Northam, Gary
Dean, College of Aviation, Professor and Chair, Department of Safety Science, . B.A. and M.Th., Harding University; Ph.D., University of Nebraska.*

SENSMEIER, MARK

Associate Professor and Chair, Departments of Aerospace and Mechanical Engineering, College of Engineering. B.S., Purdue University; M.S. and Ph.D., Virginia Polytechnic Institute and State University.

SINCLAIR, MARK R.

Professor and Chair, Department of Meteorology, College of Aviation. B.S., Otago University, New Zealand; Ph.D., Naval Postgraduate School.

SOBOTTA, ROBIN

Professor and Chair, Department of Business, College of Arts and Sciences. B.S., Grand Valley State University; M.B.A./A., Embry-Riddle Aeronautical University; Ph.D., Arizona State University.

SMITH, DARREL W.

Professor and Chair, Department of Physics, College of Arts and Sciences. B.A., M.A., and Ph.D., University of California, Irvine.

TSUTSUI, HISAYA

Professor and Chair, Department of Mathematics, College of Arts and Sciences. B.S., University of Dayton; M. and Ph.D., Northern Illinois University.

Administration

UNIVERSITY

BIXLER, CYNTHIA

Chief Information Officer.

A.S., Daytona Beach Community College.

BRAZIS, LEONARD

Director, Strategic Planning.

B.S. and M.B.A.A., Embry-Riddle Aeronautical University.

BERG, MICHELLE

Executive Director, Alumni Relations

A.S., Rosebank Bible College; Cert. Ed., University of Johannesburg, South Africa.

DESLAURIERS, FAITH W.

University Director, Veterans Affairs.

B.S. and M.Acc., Ph.D., University of Florida; CPA; CIA.

FRANCO, MARIA

Director, Institutional Research.

B.S. and M.S., University of Central Florida.

HUNT, JONI

Director of Government Relations.

B.S. and M.A.S., Embry-Riddle Aeronautical University.

JACKSON, SUSAN

Director of Internal Audit.

LLYOD, VANESSA

Director, Disability Student Services.

B.S., Bethune-Cookman College; M.S.T.M., Embry-Riddle Aeronautical University.

MANNING, LINDA

University Controller.

B.S. and M.P.A., Northern Illinois University; CPA.

MCCUNE, DAN

University Safety Officer.

B.S., New York University; M.S., Chapman College; ATP; CE-500.

MITCHELL, FRANCES

Executive Director of Finance and Business.

B.S., Rollins College.

RIDDER, STEVEN G.

Director, Athletics and Head Basketball Coach

B.S., Berea College; M.S., Eastern Kentucky University.

ROACH, RICHARD D.

Associate Vice President for Institutional Effectiveness.

B.A., University of Houston; M.Div. and D.Min., Southwestern Baptist Theological Seminary.

ROLLINS, JOHN E.

Director, Academic Performance Studies.

B.S., Embry-Riddle Aeronautical University; M.A., University of Central Florida; C-H; P-ASEL; P-G.

SCOTT-KOLLAR, LISA

Executive Director, Career Services.

B.S. and M.S.A., Embry-Riddle Aeronautical University; C-MEL-I.

YOUNG, BRANDON

Executive Director, Human Resources.

B.S. and M.B.A., University of Central Florida.

PRESCOTT

BLAKE, TED

Athletic Director.

B.S., Emporia State University; M.A., Arizona State University.

SHERIDAN, A. JAMES

Director, Safety and Security.

B.A., Marietta College; M.Ed., Ohio University.

FRAHER, ANDY

Director, International Recruitment.

B.S. and M.A., Northern Arizona University.

HALL, DAVID

Director, Business & Finance.

B.A., Arizona State University

ROY, KENDALL

Director, Records & Registration.

B.Sc., University of Strathclyde, United Kingdom, M.S., University of Arizona

LUPIN, DANIEL

Director, Financial Aid.

FROST, ELIZABETH

Director, Housing.

PALMER, SANDRA F.

Director, Health Services.

Registered Nurse. A.D.N., Yavapai College.

RAJALA, THOMAS

Dean of Enrollment Management.

B.S.Ed., California University of Pennsylvania; M.A.Ed., American University.

STEPHAN, LARRY K.

Dean of Students.

B.S., Ohio Northern University; M.A., Northern Arizona University.

THOMAS, SARAH

Director, Library Services.

B.A., University of New Mexico; M.L.S., University of Arizona.

Faculty and Administration

Prescott Campus Faculty

College of Arts and Sciences

BAILEY, QUENTIN

Assistant Professor of Physics. B.S., University of Pittsburgh; M.S. and Ph.D., Indiana University.

BAKER, ROBERT W.

Associate Professor of Global Security and Intelligence Studies. B.S., University of Nebraska; M.A., Washington State University.

BEATTY, JAMETHA A.

Associate Professor of Humanities and Communications. B.A., University of Arizona; M.A., San Francisco State University; Ph.D., Indiana University of Pennsylvania.

BELANGER, MARTY, MASTER SERGEANT, U.S. ARMY

Military Science Instructor, Army ROTC. Combat Infantryman

BLOMSTROM, SALLY A.

Associate Professor of Humanities and Communications. B.A., Arizona State University; M.A. and Ph.D., Michigan State University.

BOSKET, RANDALL, LIEUTENANT COLONEL, U.S. AIR FORCE

Assistant Professor of Aerospace Studies, Air Force ROTC. B.A., Colorado State University; M.S., Abilene Christian University.

BOZEMAN, MICHAEL

Associate Professor of Global Security. B.S., M.S., Ph.D., Sam Houston State University.

CARRERAS, RICARDO

Associate Professor of Business and Economics. B.A., University of the Americas, Mexico; M.S. and Ph.D., Texas Tech University.

CHEN, LEEANN

Associate Professor of Asian Studies, Humanities, and Communications. B.A., People's University, Beijing, China; M.A., Bradley University; Ph.D., University of Illinois.

CORYELL, CHRISTOPHER E., CAPTAIN, U.S. AIR FORCE

Assistant Professor of Aerospace Studies, Air Force ROTC. B.S., University of Arizona; M.S. Air Force Institute of Technology.

DEVEREUX, NICHOLAS A.

Associate Professor of Physics and Astronomy. B.Sc., Leicester University, England; M.Sc. and Ph.D., University of Hawaii; CFI; P-ASEL.

EHRESMAN, MARK, MASTER SERGEANT, U.S. ARMY

Senior Military Science Instructor, Army ROTC. B.S., Embry-Riddle Aeronautical University; Combat Infantryman.

GIBSON, RICK

Assistant Professor of Business. B.A., Winona State University; M.I.M., American Graduate School of Management.

GORJIDOOZ, JAVAD

Professor of Finance. B.A., Tehran College of Insurance; M.A., M.B.A., Ph.D., Indiana University.

HASLAM, MATTHEW J.

Assistant Professor of Physics. B.A., M.A. and Ph.D., Brigham Young University.

GRETARSSON, ANDRI M.

Associate Professor of Humanities and Communication. B.S., University of Edinburgh; Ph.D., Syracuse University.

HENNER, MURRAY

Professor of Global Studies. B.A. and L.L.M., Hofstra University; J.D., Western New England College.

HILL, JESSE A., CAPTAIN, U.S. ARMY

Assistant Professor of Military Science, Army ROTC. B.S., Middle Tennessee State University.

HOHREIN, BRIAN,

Military Science Instructor, Army ROTC. B.S., Embry-Riddle Aeronautical University.

HRILJAC, PAUL

Professor of Mathematics and Computer Science. B.S., University of Illinois; Ph.D., Massachusetts Institute of Technology.

HUGHEY, BRENNAN

Visiting Professor of Physics. B.S., Hope College; Ph.D., University of Wisconsin.

JACOBS, JASON M.

Instructor of Mathematics. B.S., Millersville University; M.S., Virginia Tech.

JENKINS, JOHN

Professor of Mathematics. B.A., University of Tennessee; M.A.T., University of Florida.

JOHNSON, TIMOTHY H., MAJOR, U.S. AIR FORCE

Assistant Professor of Aerospace Studies, Air Force ROTC. B.A., Rutgers University, M.S., St. Joseph's University

LANDIS-GROOM, EILEEN E.

Professor of Humanities and Communications. B.A., Bucknell University; M.A., Western Washington University; D.A., Idaho State University.

LONG, ELIZABETH C.

Assistant Professor of Biology. B.A., University of Richmond; M.S., The College of William and Mary; Ph.D. University of California Davis..

MALFER, DENNIS J., COLONEL, U.S. AIR FORCE

Assistant Professor of Aerospace Studies, Air Force ROTC, B.S., U.S. Air Force Academy; M.S., Embry-Riddle Aeronautical University.

MALNAR, ALAN

Associate Professor of Humanities and Communications. B.A., Hunter College; M.A., California State University, Dominguez Hills; Ph.D., Indiana University of Pennsylvania.

MC ELWAIN, PATRIC

Associate Professor of Humanities and Communications. B.A., Bryan College; M.A., Edinboro State University; Ph.D., Indiana University of Pennsylvania.

MCMAHON, STEPHEN C., MAJOR, U.S. AIR FORCE

Assistant Professor of Aerospace Studies, Air Force ROTC. B.S., Wayland Baptist University.

NORDBROCK, ANITA

Associate Professor of Humanities and Communications. B.A. and M.A., University of Illinois; M.A. and Ph.D., University of Hawaii, Manoa.

NORDSTROM, BRIAN H.

Professor of Chemistry. B.A. and M.S., University of California, Berkeley; Ed.D., Northern Arizona University.

Faculty and Administration

POON, EDWARD

Associate Professor of Mathematics. B.S., University of British Columbia; M.S. and Ph.D., University of Toronto.

RACHFORD, BRIAN L.

Associate Professor of Physics. B.S., University of Iowa; Ph.D., University of Wyoming.

STRANDBERG, JOHN E., LIEUTENANT, U.S. ARMY

Officer in Charge and Assistant Professor of Military Science, Army ROTC. B.S., University of Oregon; M.S. City University.

THOMAS, ROMEO

Professor of Mathematics. B.S. and M.S., University of Baghdad; Ph.D., University of Warwick, England.

TOPPER, MICHAEL

Assistant Professor of Mathematics. B.A., Mount St. Mary's College; M.A., University of Maryland, College Park.

WILSON, CATHERINE

Instructor of Mathematics. B.S. and M.S., Northern Arizona University.

YANG, LI

Assistant Professor of Communications and Chinese. B.A. and M.A. Nankai University, China., Ph.D. University Of Arizona

ZANOLIN, MICHELE

Assistant Professor of Physics. B.S., M.S., Ph.D., University of Parma, Italy.

ZHAN, HONG

Associate Professor of Communications and Chinese. B.A. and M.A., Northeast Normal University, China; M.E., Utsunomiya University, Japan; M.A. and Ed.D., Northern Arizona University.

College of Aviation

BEDARD, RAYNALD

Associate Professor of Aeronautical Science. B.Eng., Royal Military College; M.S., Naval Postgraduate School.

CARR, RONALD L.

Assistant Professor of Aeronautical Science. B.S., Arizona State University; M.A.S., Embry-Riddle Aeronautical University; ATP.

COX, BRYAN L.

Assistant Professor of Aeronautical Science. B.S. and M.A.S., Embry-Riddle Aeronautical University. CI-AMEL; CI-ASEL-S; CI-Helicopter; A&P; Senior Army Aviator (retired); Military IP (retired).

FOGLEMAN, MAXWELL

Associate Professor of Safety Science. B.S., University of Arizona; M.S., Pennsylvania State University; M.P.H., New Jersey School of Public Health ; Ph.D., Texas Technological University.

IVANOVA, DOROTHEA C.

Associate Professor of Meteorology. B.S. and M.S., Sofia University; Ph.D., University of Nevada.

JAMES, CURTIS

Associate Professor of Meteorology. B.S., University of Arizona, Tucson; Ph.D., University of Washington.

JERALDS, SEAN

Assistant Professor of Aeronautical Science. B.S. and M.S., Embry-Riddle Aeronautical University; C-ASMEL-I; CFII; MEI; AGI.

LUEDTKE, JACQUELINE

Professor of Safety Science. B.B.A. and M.B.A., Wichita State University; Ed.D., Oklahoma State University; CFI-I; C-ASMEL-I; AGI; IGI.

MANDERFIELD, NICHOLAS

Assistant Professor of Aeronautical Science. B.S., University of Detroit; M.H.A., Washington University, St. Louis; C-ASMEL-I; BGI.

NELEPOVIZ, PAUL F.

Assistant Professor of Unmanned Aerial Systems. B.S., Colorado State University; M.S., Embry-Riddle Aeronautical University;

O'HARA, WILLIAM F.

Assistant Professor of Aeronautical Science. B.A., College of the Holy Cross; M.A., U.S. Naval War College; ATP-AMELCA 212; C-ASMEL-I; CFII; MEI.

PANOSIAN, JACK M.

Assistant Professor of Aeronautical Science. B.S., Embry-Riddle Aeronautical University; J.D., Thomas M. Cooley Law School; ATP-ASMEL; Type; DC-9, A-319/320; CFII; BGI; AGI; C-ASMEL-I.

PARSONS, KENNETH E.

Associate Professor of Meteorology. B.S., Miami University; B.S., Pennsylvania State University; M.S., Troy State University; Ph.D., Purdue University.

REHBACH, RANDY

Assistant Professor of Aeronautical Science. B.S. and M.A.S., Embry-Riddle Aeronautical University; AD; A&P; ATP; CE-500; CFI.

SPENCER, BRENT

Assistant Professor Of Air Traffic Management., B.S. Embry-Riddle Aeronautical University

WALDOCK, WILLIAM

Professor of Safety Science. B.A., University of Florida; M.A.S., Embry-Riddle Aeronautical University; PASEL.

College of Engineering

ASHWORTH, JEFFREY

Associate Professor of Aerospace Engineering. B.S.A.E. and M.S.A.E., West Virginia University; Ph.D., University of Colorado, Boulder; P-ASEL.

BENAVIDES, JULIO

Assistant Professor Aerospace Engineering, B.S., Embry-Riddle Aeronautical University, MS Penn State University, Ph.D., Penn State University.

BORDIGNON, KEN A.

Assistant Professor of Aerospace Engineering. B.S., University of Notre Dame; M.A.E. and Ph.D., Virginia Tech.

DAVIS, BRIAN

Associate Professor Of Electrical And Computer Engineering. B.S.E.E. Michigan Technological University. M.S.E University Of Michigan. Ph.D University Of Michigan

Faculty and Administration

FABIAN, MICHAEL

Associate Professor of Aerospace Engineering. B.S., US Air Force Academy; M.S. University of Washington; and Ph.D., University of Notre Dame.

GALLY, THOMAS A.

Professor of Aerospace Engineering. B.S., M.S., and Ph.D., Texas A&M University.

GENTILINI, IACOPO

Assistant Professor of Aerospace and Mechanical Engineering. Diplom, Universitat Karlsruhe, Germany; M.S. and Ph.D., Carnegie Mellon University.

HAVEN, BRENDA

Associate Professor of Mechanical Engineering. B.S., University of Minnesota Twin Cities; M.S., Air Force Institute of Technology; Ph.D., University of Washington.

HAYASHIBARA, SHIGEO

Assistant Professor of Aerospace Engineering. B.S.A.E., Wichita State University; M.S., University of Southern California; Ph.D., Wichita State University.

HELBLING, JAMES

Associate Professor of Aerospace Engineering. B.S., Purdue University; M.S., California State Polytechnic.

ISENBERG, DOUGLAS

Assistant Professor Of Aerospace And Mechanical Engineering. B.S., University Of North Carolina Charlotte., M.S., University Of North Carolina Charlotte., Ph.D University Of North Carolina Charlotte.

JAFFE, MATT

Associate Professor of Software Engineering. B.A., University of California, Berkeley; M.S., University of West Florida; Ph.D., University of California, Irvine.

JOE, WOONG YEOL

Assistant Professor Of Mechanical Engineering. B.S., Hong-Ik University. M.S. Polytechnic Institute Of New York University. Ph.D., Columbia University

KODIMER, DENNIS

Assistant Professor Electrical Engineering., B.S.E.E. California Institute Of Technology., M.S. University of Illinois

LANNING, DAVID B.

Professor of Aerospace Engineering. B.S. and Ph.D., Ohio State University; M.S., University of Akron.

LAWSON, THOMAS

Assistant Professor of Software Engineering. B.S. and M.Ed., Arizona State University; M.S., East Texas State University.

LESTARI, WAHYU

Associate Professor of Aerospace Engineering. B.S. and M.S., Delft University of Technology; Ph.D., Georgia Institute of Technology.

LYALL, JAMES R.

Associate Professor of Electrical Engineering. B.S.E.E., General Motors Institute; M.S.E.E., University of Colorado; D.E., University of Kansas; P-ASEL.

POST, JOHN E.

Associate Professor of Electrical Engineering. B.S., Texas Tech University; M.E., University of Texas; Ph.D., Stanford University.

TRAUB, LANCE

Associate Professor of Aerospace Engineering. B.S. and M.S., University of Witwatersrand; Ph.D., Texas A&M.

WALL, BRAD

Assistant Professor of Aerospace Engineering. B.S., University of North Dakota; M.S. and Ph.D., University of Illinois.

YALE, GARY

Associate Professor of Aerospace Engineering. B.S., U.S. Air Force Academy; M.S., Massachusetts Institute of Technology; Naval Postgraduate School.

BOARD OF TRUSTEES

The Board of Trustees is composed of individuals of national, state, and local prominence. These members serve without remuneration and give freely of their time in establishing policy and providing guidance to the administration in the furtherance of the educational goals and objectives of the University.

Chairman of the Board

JIM HENDERSON

*Chairman and Chief Financial Officer
AssuredPartners Inc.
Lake Mary, FL*

JOHN AMORE

*Chief Executive Officer
Global General Insurance
Zurich Financial Services
Staten Island, NY*

LAWRENCE W. CLARKSON

*President
Boeing Enterprise (Retired)
Marietta, GA*

CAROLINE DANIELS

*Chief Executive Officer
Aircraft Technical Publishers
Brisbane, CA*

KENNETH DUFOUR

*President
Aviation Management Consulting Inc.
Rockford, IL*

JEFFREY FEASEL

*President and Chief Executive Officer
Halifax Community Health System
Daytona Beach, FL*

JAMES HAGEDORN

*Chairman and Chief Executive Officer
Scotts Miracle-Gro Co.
Marysville, OH*

KAREN HOLBROOK

*Vice President for Research and Innovation
University of South Florida
Tampa, FL*

MORI HOSSEINI

*President
Interwest Construction Inc.
Daytona Beach, FL*

**GENERAL RONALD E. KEYS
(RETIRED)**

*Principal, RK Solution Enterprises
Senior Advisor, Bipartisan Policy Center
General, United States Air Force (Retired)
Woodbridge, VA*

**GENERAL ARTHUR J. LICHTÉ
(RETIRED)**

*General, United States Air Force (Retired)
Lutz, FL*

JOSEPH MARTIN

*Office of the Chairman and Vice Chairman
of the Board
Fairchild Semiconductor International Inc.
(Retired)
Cumberland Foreside, ME*

GLENN S. RITCHEY

*President and Chief Executive Officer
Jon Hall Automotive Group
Daytona Beach, FL*

DAVID ROBERTSON

Ray Township, MI

JEAN ROSANVALLON

*President and Chief Executive Officer
Dassault Falcon Jet Inc.
South Hackensack, NJ*

ZANE ROWE

*Executive Vice President &
Chief Financial Officer
United Airlines
Chicago, IL*

LOU SENO

*President and Chief Executive Officer
Jet Support Services, Inc.
Chicago, IL*

NICOLE P. STOTT

*Astronaut
