

Master of Aviation Maintenance

The program addresses the range of career opportunities in the aviation maintenance industry and emphasizes the knowledge, skills, and experience required for professional practice. Instruction is provided by faculty with expertise in aviation maintenance and reflects current practices and developments in the field. Students examine evolving requirements in aviation maintenance at domestic and global levels, including the application of advanced technologies and concepts.

The curriculum includes emphasis on safety across maintenance and engineering operations, as well as the role of cybersecurity in protecting aviation systems.

The Master of Aviation Maintenance at the **Worldwide Campus** is designed for students with backgrounds in engineering, management, cybersecurity, or maintenance. The curriculum focuses on the acquisition and application of knowledge and skills relevant to the global aviation maintenance industry and supports preparation for supervisory and managerial roles in aviation maintenance programs. Coursework is offered online multiple times each year with no prerequisites required. The program also offers a combined pathway with a bachelor's degree, allowing students to begin advanced study earlier and progress through their academic programs in an accelerated sequence.
