

A.S. in Aeronautics

Program-Level Student Learning Outcomes

Students will:

- Apply management theories and practices to aviation/aerospace operations, including the ability to interpret data and make informed decisions.
- Evaluate national and international aviation legislation and law, demonstrating a comprehensive understanding of their implications for the aviation, aerospace, and aeronautics sectors.
- Enhance safety within the aviation, aerospace, and aeronautics industries by applying aviation safety principles and practices.
- Apply advanced principles of aviation, aerospace, and aeronautical science to analyze and solve complex problems within the aviation/aerospace industry.
