

A.S. in Air Traffic Management

The Associate of Science in Air Traffic Management is offered at the Daytona Beach, Florida, campus and the Prescott, Arizona, campus of Embry-Riddle Aeronautical University. The program provides instruction in foundational air traffic procedures, communication skills, and aviation safety protocols in aviation-focused environments supported by instructional staff and training resources.

At the **Daytona Beach Campus**, the Associate of Science in Air Traffic Management is designed to prepare students for air traffic control roles. The program focuses on Terminal (Tower) operations through the FAA's Enhanced Air Traffic Collegiate Training Initiative (AT-CTI), which allows graduates to enter the field following program completion rather than continuing training at the FAA Academy. Students use simulation laboratories and complete hands-on training in air traffic control using industry-relevant tools, equipment, and procedures. Courses are shared with the Bachelor of Science in Air Traffic Management.

At the **Prescott Campus**, the Associate of Science in Air Traffic Management is offered through the Department of Applied Aviation Sciences. The program focuses on Terminal (Tower) operations through the FAA's Enhanced Air Traffic Collegiate Training Initiative (AT-CTI), which allows graduates to enter the field following program completion rather than continuing training at the FAA Academy. Students use simulation laboratories and complete hands-on training in air traffic control using industry-relevant tools, equipment, and procedures. Courses are shared with the Bachelor of Science in Air Traffic Management.
