

Minor in Aviation Sustainability

The minor in Aviation Sustainability introduces students to a wide range of topics related to sustainability in aviation. Students who complete the minor will develop the critical problem-solving and analytical skills needed to address real-world aviation sustainability challenges.

A required 200-level course introduces fundamentals of aviation sustainability, while another required 300-level course gives students an opportunity to synthesize current research and explore emerging technological solutions to sustainability. The remaining three elective courses cover the environmental, social, and economic aspects of sustainability.

Some majors may not be eligible to pair with this minor. See the Minor Restrictions (<https://catalog.erau.edu/programs/undergraduate/minors/restrictions/>) list for details.
