

Undergraduate Certificate in Artificial Intelligence, Ethics, and Creativity

The Undergraduate Certificate in Artificial Intelligence, Ethics and Creativity is designed to help students understand artificial intelligence as both a tool and a force with significant cultural, ethical and creative implications. The program includes coursework in research applications, ethics and moral philosophy, and generative AI in real-world contexts, enabling students to approach AI with both technical knowledge and a human-centered perspective.

This certificate is well suited for students from a variety of disciplines and supports the development of forward-thinking professionals who can apply ethical reasoning and creative insight to real-world challenges. Embry-Riddle's interdisciplinary approach prepares students for a future in which technology and humanity are increasingly interconnected.

Note: Certificate programs are not eligible for Title IV Federal Financial Aid unless taken as part of a degree program.

Some certificates may not be eligible to pair with a minor. See the Minor Restrictions (<https://catalog.erau.edu/programs/undergraduate/minors/restrictions/>) list for details.
